LL_DMA_GetStreamPriorityLevel

Function name

__STATIC_INLINE uint32_t LL_DMA_GetStreamPriorityLevel (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Get Stream priority level.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **Returned:** value can be one of the following values:
  - LL_DMA_PRIORITY_LOW
  - LL_DMA_PRIORITY_MEDIUM
  - LL_DMA_PRIORITY_HIGH
  - LL_DMA_PRIORITY_VERYHIGH

Reference Manual to LL API cross reference:

- CR PL LL_DMA_GetStreamPriorityLevel

LL_DMA_EnableBufferableTransfer

Function name

__STATIC_INLINE void LL_DMA_EnableBufferableTransfer (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Enable DMA stream bufferable transfer.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TRBUFF LL_DMA_EnableBufferableTransfer

LL_DMA_DisableBufferableTransfer

Function name

__STATIC_INLINE void LL_DMA_DisableBufferableTransfer (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Disable DMA stream bufferable transfer.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TRBUFF LL_DMA_DisableBufferableTransfer

LL_DMA_SetDataLength

Function name

__STATIC_INLINE void LL_DMA_SetDataLength (DMA_TypeDef * DMAx, uint32_t Stream, uint32_t NbData)

Function description

Set Number of data to transfer.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7
- **NbData:** Between 0 to 0xFFFFFFFF

Return values

- **None:**

Notes

- This action has no effect if stream is enabled.

Reference Manual to LL API cross reference:

- NDTR NDT LL_DMA_SetDataLength

LL_DMA_GetDataLength

Function name

__STATIC_INLINE uint32_t LL_DMA_GetDataLength (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Get Number of data to transfer.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **Between:** 0 to 0xFFFFFFFF

Notes

- Once the stream is enabled, the return value indicate the remaining bytes to be transmitted.

Reference Manual to LL API cross reference:

- NDTR NDT LL_DMA_GetDataLength

LL_DMA_SetPeriphRequest

Function name

__STATIC_INLINE void LL_DMA_SetPeriphRequest (DMA_TypeDef * DMAx, uint32_t Stream, uint32_t Request)

Function description

Set DMA request for DMA Streams on DMAMUX Channel x.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

- **Request:** This parameter can be one of the following values:
  - LL_DMAMUX1_REQ_MEM2MEM
  - LL_DMAMUX1_REQ_GENERATOR0
  - LL_DMAMUX1_REQ_GENERATOR1
  - LL_DMAMUX1_REQ_GENERATOR2

LL_DMA_GetMemoryAddress

Function name

__STATIC_INLINE uint32_t LL_DMA_GetMemoryAddress (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Get the Memory address.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **Between:** 0 to 0xFFFFFFFF

Notes

- Interface used for direction LL_DMA_DIRECTION_PERIPH_TO_MEMORY or LL_DMA_DIRECTION_MEMORY_TO_PERIPH only.

Reference Manual to LL API cross reference:

- M0AR M0A LL_DMA_GetMemoryAddress

LL_DMA_GetPeriphAddress

Function name

__STATIC_INLINE uint32_t LL_DMA_GetPeriphAddress (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Get the Peripheral address.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **Between:** 0 to 0xFFFFFFFF

Notes

- Interface used for direction LL_DMA_DIRECTION_PERIPH_TO_MEMORY or LL_DMA_DIRECTION_MEMORY_TO_PERIPH only.

Reference Manual to LL API cross reference:

- PAR PA LL_DMA_GetPeriphAddress

LL_DMA_SetM2MSrcAddress

Function name

__STATIC_INLINE void LL_DMA_SetM2MSrcAddress (DMA_TypeDef * DMAx, uint32_t Stream, uint32_t MemoryAddress)

Function description

Set the Memory to Memory Source address.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7
- **MemoryAddress:** Between 0 to 0xFFFFFFFF

Return values

- **None:**

Notes

- Interface used for direction LL_DMA_DIRECTION_MEMORY_TO_MEMORY only.
- This API must not be called when the DMA stream is enabled.

Reference Manual to LL API cross reference:

- PAR PA LL_DMA_SetM2MSrcAddress

LL_DMA_SetM2MDstAddress

Function name

__STATIC_INLINE void LL_DMA_SetM2MDstAddress (DMA_TypeDef * DMAx, uint32_t Stream, uint32_t MemoryAddress)

Function description

Set the Memory to Memory Destination address.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7
- **MemoryAddress:** Between 0 to 0xFFFFFFFF

Return values

- **None:**

Notes

- Interface used for direction LL_DMA_DIRECTION_MEMORY_TO_MEMORY only.
- This API must not be called when the DMA stream is enabled.

Reference Manual to LL API cross reference:

- M0AR M0A LL_DMA_SetM2MDstAddress

LL_DMA_GetM2MSrcAddress

Function name

__STATIC_INLINE uint32_t LL_DMA_GetM2MSrcAddress (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Get the Memory to Memory Source address.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **Between:** 0 to 0xFFFFFFFF

Notes

- Interface used for direction LL_DMA_DIRECTION_MEMORY_TO_MEMORY only.

Reference Manual to LL API cross reference:

- PAR PA LL_DMA_GetM2MSrcAddress

LL_DMA_GetM2MDstAddress

Function name

__STATIC_INLINE uint32_t LL_DMA_GetM2MDstAddress (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Get the Memory to Memory Destination address.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **Between:** 0 to 0xFFFFFFFF

Notes

- Interface used for direction LL_DMA_DIRECTION_MEMORY_TO_MEMORY only.

Reference Manual to LL API cross reference:

- M0AR M0A LL_DMA_GetM2MDstAddress

LL_DMA_SetMemory1Address

Function name

__STATIC_INLINE void LL_DMA_SetMemory1Address (DMA_TypeDef * DMAx, uint32_t Stream, uint32_t Address)

Function description

Set Memory 1 address (used in case of Double buffer mode).

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7
- **Address:** Between 0 to 0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- M1AR M1A LL_DMA_SetMemory1Address

LL_DMA_GetMemory1Address

Function name

__STATIC_INLINE uint32_t LL_DMA_GetMemory1Address (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Get Memory 1 address (used in case of Double buffer mode).

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **Between:** 0 to 0xFFFFFFFF

Reference Manual to LL API cross reference:

- M1AR M1A LL_DMA_GetMemory1Address

LL_DMA_IsActiveFlag_HT0

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_HT0 (DMA_TypeDef * DMAx)

Function description

Get Stream 0 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR HTIF0 LL_DMA_IsActiveFlag_HT0

LL_DMA_IsActiveFlag_HT1

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_HT1 (DMA_TypeDef * DMAx)

Function description

Get Stream 1 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR HTIF1 LL_DMA_IsActiveFlag_HT1

LL_DMA_IsActiveFlag_HT2

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_HT2 (DMA_TypeDef * DMAx)

Function description

Get Stream 2 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR HTIF2 LL_DMA_IsActiveFlag_HT2

LL_DMA_IsActiveFlag_HT3

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_HT3 (DMA_TypeDef * DMAx)

Function description

Get Stream 3 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR HTIF3 LL_DMA_IsActiveFlag_HT3

LL_DMA_IsActiveFlag_HT4

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_HT4 (DMA_TypeDef * DMAx)

Function description

Get Stream 4 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR HTIF4 LL_DMA_IsActiveFlag_HT4

LL_DMA_IsActiveFlag_HT5

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_HT5 (DMA_TypeDef * DMAx)

Function description

Get Stream 5 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR HTIF0 LL_DMA_IsActiveFlag_HT5

LL_DMA_IsActiveFlag_HT6

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_HT6 (DMA_TypeDef * DMAx)

Function description

Get Stream 6 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR HTIF6 LL_DMA_IsActiveFlag_HT6

LL_DMA_IsActiveFlag_HT7

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_HT7 (DMA_TypeDef * DMAx)

Function description

Get Stream 7 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR HTIF7 LL_DMA_IsActiveFlag_HT7

LL_DMA_IsActiveFlag_TC0

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TC0 (DMA_TypeDef * DMAx)

Function description

Get Stream 0 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR TCIF0 LL_DMA_IsActiveFlag_TC0

LL_DMA_IsActiveFlag_TC1

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TC1 (DMA_TypeDef * DMAx)

Function description

Get Stream 1 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR TCIF1 LL_DMA_IsActiveFlag_TC1

LL_DMA_IsActiveFlag_TC2

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TC2 (DMA_TypeDef * DMAx)

Function description

Get Stream 2 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR TCIF2 LL_DMA_IsActiveFlag_TC2

LL_DMA_IsActiveFlag_TC3

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TC3 (DMA_TypeDef * DMAx)

Function description

Get Stream 3 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR TCIF3 LL_DMA_IsActiveFlag_TC3

LL_DMA_IsActiveFlag_TC4

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TC4 (DMA_TypeDef * DMAx)

Function description

Get Stream 4 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR TCIF4 LL_DMA_IsActiveFlag_TC4

LL_DMA_IsActiveFlag_TC5

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TC5 (DMA_TypeDef * DMAx)

Function description

Get Stream 5 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR TCIF0 LL_DMA_IsActiveFlag_TC5

LL_DMA_IsActiveFlag_TC6

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TC6 (DMA_TypeDef * DMAx)

Function description

Get Stream 6 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR TCIF6 LL_DMA_IsActiveFlag_TC6

LL_DMA_IsActiveFlag_TC7

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TC7 (DMA_TypeDef * DMAx)

Function description

Get Stream 7 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR TCIF7 LL_DMA_IsActiveFlag_TC7

LL_DMA_IsActiveFlag_TE0

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TE0 (DMA_TypeDef * DMAx)

Function description

Get Stream 0 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR TEIF0 LL_DMA_IsActiveFlag_TE0

LL_DMA_IsActiveFlag_TE1

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TE1 (DMA_TypeDef * DMAx)

Function description

Get Stream 1 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR TEIF1 LL_DMA_IsActiveFlag_TE1

LL_DMA_IsActiveFlag_TE2

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TE2 (DMA_TypeDef * DMAx)

Function description

Get Stream 2 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR TEIF2 LL_DMA_IsActiveFlag_TE2

LL_DMA_IsActiveFlag_TE3

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TE3 (DMA_TypeDef * DMAx)

Function description

Get Stream 3 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR TEIF3 LL_DMA_IsActiveFlag_TE3

LL_DMA_IsActiveFlag_TE4

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TE4 (DMA_TypeDef * DMAx)

Function description

Get Stream 4 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR TEIF4 LL_DMA_IsActiveFlag_TE4

LL_DMA_IsActiveFlag_TE5

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TE5 (DMA_TypeDef * DMAx)

Function description

Get Stream 5 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR TEIF0 LL_DMA_IsActiveFlag_TE5

LL_DMA_IsActiveFlag_TE6

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TE6 (DMA_TypeDef * DMAx)

Function description

Get Stream 6 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR TEIF6 LL_DMA_IsActiveFlag_TE6

LL_DMA_IsActiveFlag_TE7

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_TE7 (DMA_TypeDef * DMAx)

Function description

Get Stream 7 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR TEIF7 LL_DMA_IsActiveFlag_TE7

LL_DMA_IsActiveFlag_DME0

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_DME0 (DMA_TypeDef * DMAx)

Function description

Get Stream 0 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR DMEIF0 LL_DMA_IsActiveFlag_DME0

LL_DMA_IsActiveFlag_DME1

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_DME1 (DMA_TypeDef * DMAx)

Function description

Get Stream 1 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR DMEIF1 LL_DMA_IsActiveFlag_DME1

LL_DMA_IsActiveFlag_DME2

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_DME2 (DMA_TypeDef * DMAx)

Function description

Get Stream 2 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR DMEIF2 LL_DMA_IsActiveFlag_DME2

LL_DMA_IsActiveFlag_DME3

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_DME3 (DMA_TypeDef * DMAx)

Function description

Get Stream 3 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR DMEIF3 LL_DMA_IsActiveFlag_DME3

LL_DMA_IsActiveFlag_DME4

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_DME4 (DMA_TypeDef * DMAx)

Function description

Get Stream 4 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR DMEIF4 LL_DMA_IsActiveFlag_DME4

LL_DMA_IsActiveFlag_DME5

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_DME5 (DMA_TypeDef * DMAx)

Function description

Get Stream 5 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR DMEIF0 LL_DMA_IsActiveFlag_DME5

LL_DMA_IsActiveFlag_DME6

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_DME6 (DMA_TypeDef * DMAx)

Function description

Get Stream 6 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR DMEIF6 LL_DMA_IsActiveFlag_DME6

LL_DMA_IsActiveFlag_DME7

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_DME7 (DMA_TypeDef * DMAx)

Function description

Get Stream 7 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR DMEIF7 LL_DMA_IsActiveFlag_DME7

LL_DMA_IsActiveFlag_FE0

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_FE0 (DMA_TypeDef * DMAx)

Function description

Get Stream 0 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR FEIF0 LL_DMA_IsActiveFlag_FE0

LL_DMA_IsActiveFlag_FE1

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_FE1 (DMA_TypeDef * DMAx)

Function description

Get Stream 1 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR FEIF1 LL_DMA_IsActiveFlag_FE1

LL_DMA_IsActiveFlag_FE2

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_FE2 (DMA_TypeDef * DMAx)

Function description

Get Stream 2 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR FEIF2 LL_DMA_IsActiveFlag_FE2

LL_DMA_IsActiveFlag_FE3

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_FE3 (DMA_TypeDef * DMAx)

Function description

Get Stream 3 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LISR FEIF3 LL_DMA_IsActiveFlag_FE3

LL_DMA_IsActiveFlag_FE4

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_FE4 (DMA_TypeDef * DMAx)

Function description

Get Stream 4 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR FEIF4 LL_DMA_IsActiveFlag_FE4

LL_DMA_IsActiveFlag_FE5

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_FE5 (DMA_TypeDef * DMAx)

Function description

Get Stream 5 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR FEIF0 LL_DMA_IsActiveFlag_FE5

LL_DMA_IsActiveFlag_FE6

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_FE6 (DMA_TypeDef * DMAx)

Function description

Get Stream 6 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR FEIF6 LL_DMA_IsActiveFlag_FE6

LL_DMA_IsActiveFlag_FE7

Function name

__STATIC_INLINE uint32_t LL_DMA_IsActiveFlag_FE7 (DMA_TypeDef * DMAx)

Function description

Get Stream 7 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- HISR FEIF7 LL_DMA_IsActiveFlag_FE7

LL_DMA_ClearFlag_HT0

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_HT0 (DMA_TypeDef * DMAx)

Function description

Clear Stream 0 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CHTIF0 LL_DMA_ClearFlag_HT0

LL_DMA_ClearFlag_HT1

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_HT1 (DMA_TypeDef * DMAx)

Function description

Clear Stream 1 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CHTIF1 LL_DMA_ClearFlag_HT1

LL_DMA_ClearFlag_HT2

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_HT2 (DMA_TypeDef * DMAx)

Function description

Clear Stream 2 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CHTIF2 LL_DMA_ClearFlag_HT2

LL_DMA_ClearFlag_HT3

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_HT3 (DMA_TypeDef * DMAx)

Function description

Clear Stream 3 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CHTIF3 LL_DMA_ClearFlag_HT3

LL_DMA_ClearFlag_HT4

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_HT4 (DMA_TypeDef * DMAx)

Function description

Clear Stream 4 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CHTIF4 LL_DMA_ClearFlag_HT4

LL_DMA_ClearFlag_HT5

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_HT5 (DMA_TypeDef * DMAx)

Function description

Clear Stream 5 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CHTIF5 LL_DMA_ClearFlag_HT5

LL_DMA_ClearFlag_HT6

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_HT6 (DMA_TypeDef * DMAx)

Function description

Clear Stream 6 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CHTIF6 LL_DMA_ClearFlag_HT6

LL_DMA_ClearFlag_HT7

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_HT7 (DMA_TypeDef * DMAx)

Function description

Clear Stream 7 half transfer flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CHTIF7 LL_DMA_ClearFlag_HT7

LL_DMA_ClearFlag_TC0

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TC0 (DMA_TypeDef * DMAx)

Function description

Clear Stream 0 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CTCIF0 LL_DMA_ClearFlag_TC0

LL_DMA_ClearFlag_TC1

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TC1 (DMA_TypeDef * DMAx)

Function description

Clear Stream 1 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CTCIF1 LL_DMA_ClearFlag_TC1

LL_DMA_ClearFlag_TC2

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TC2 (DMA_TypeDef * DMAx)

Function description

Clear Stream 2 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CTCIF2 LL_DMA_ClearFlag_TC2

LL_DMA_ClearFlag_TC3

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TC3 (DMA_TypeDef * DMAx)

Function description

Clear Stream 3 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CTCIF3 LL_DMA_ClearFlag_TC3

LL_DMA_ClearFlag_TC4

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TC4 (DMA_TypeDef * DMAx)

Function description

Clear Stream 4 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CTCIF4 LL_DMA_ClearFlag_TC4

LL_DMA_ClearFlag_TC5

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TC5 (DMA_TypeDef * DMAx)

Function description

Clear Stream 5 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CTCIF5 LL_DMA_ClearFlag_TC5

LL_DMA_ClearFlag_TC6

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TC6 (DMA_TypeDef * DMAx)

Function description

Clear Stream 6 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

LL_DMA_ClearFlag_TC7

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TC7 (DMA_TypeDef * DMAx)

Function description

Clear Stream 7 transfer complete flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CTCIF7 LL_DMA_ClearFlag_TC7

LL_DMA_ClearFlag_TE0

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TE0 (DMA_TypeDef * DMAx)

Function description

Clear Stream 0 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CTEIF0 LL_DMA_ClearFlag_TE0

LL_DMA_ClearFlag_TE1

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TE1 (DMA_TypeDef * DMAx)

Function description

Clear Stream 1 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CTEIF1 LL_DMA_ClearFlag_TE1

LL_DMA_ClearFlag_TE2

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TE2 (DMA_TypeDef * DMAx)

Function description

Clear Stream 2 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CTEIF2 LL_DMA_ClearFlag_TE2

LL_DMA_ClearFlag_TE3

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TE3 (DMA_TypeDef * DMAx)

Function description

Clear Stream 3 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CTEIF3 LL_DMA_ClearFlag_TE3

LL_DMA_ClearFlag_TE4

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TE4 (DMA_TypeDef * DMAx)

Function description

Clear Stream 4 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CTEIF4 LL_DMA_ClearFlag_TE4

LL_DMA_ClearFlag_TE5

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TE5 (DMA_TypeDef * DMAx)

Function description

Clear Stream 5 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CTEIF5 LL_DMA_ClearFlag_TE5

LL_DMA_ClearFlag_TE6

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TE6 (DMA_TypeDef * DMAx)

Function description

Clear Stream 6 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CTEIF6 LL_DMA_ClearFlag_TE6

LL_DMA_ClearFlag_TE7

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_TE7 (DMA_TypeDef * DMAx)

Function description

Clear Stream 7 transfer error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CTEIF7 LL_DMA_ClearFlag_TE7

LL_DMA_ClearFlag_DME0

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_DME0 (DMA_TypeDef * DMAx)

Function description

Clear Stream 0 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CDMEIF0 LL_DMA_ClearFlag_DME0

LL_DMA_ClearFlag_DME1

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_DME1 (DMA_TypeDef * DMAx)

Function description

Clear Stream 1 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CDMEIF1 LL_DMA_ClearFlag_DME1

LL_DMA_ClearFlag_DME2

Function name

Function description

Clear Stream 3 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CDMEIF3 LL_DMA_ClearFlag_DME3

LL_DMA_ClearFlag_DME4

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_DME4 (DMA_TypeDef * DMAx)

Function description

Clear Stream 4 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CDMEIF4 LL_DMA_ClearFlag_DME4

LL_DMA_ClearFlag_DME5

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_DME5 (DMA_TypeDef * DMAx)

Function description

Clear Stream 5 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CDMEIF5 LL_DMA_ClearFlag_DME5

LL_DMA_ClearFlag_DME6

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_DME6 (DMA_TypeDef * DMAx)

Function description

Clear Stream 6 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CDMEIF6 LL_DMA_ClearFlag_DME6

LL_DMA_ClearFlag_DME7

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_DME7 (DMA_TypeDef * DMAx)

Function description

Clear Stream 7 direct mode error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CDMEIF7 LL_DMA_ClearFlag_DME7

LL_DMA_ClearFlag_FE0

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_FE0 (DMA_TypeDef * DMAx)

Function description

Clear Stream 0 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CFEIF0 LL_DMA_ClearFlag_FE0

LL_DMA_ClearFlag_FE1

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_FE1 (DMA_TypeDef * DMAx)

Function description

Clear Stream 1 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CFEIF1 LL_DMA_ClearFlag_FE1

LL_DMA_ClearFlag_FE2

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_FE2 (DMA_TypeDef * DMAx)

Function description

Clear Stream 2 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CFEIF2 LL_DMA_ClearFlag_FE2

LL_DMA_ClearFlag_FE3

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_FE3 (DMA_TypeDef * DMAx)

Function description

Clear Stream 3 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- LIFCR CFEIF3 LL_DMA_ClearFlag_FE3

LL_DMA_ClearFlag_FE4

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_FE4 (DMA_TypeDef * DMAx)

Function description

Clear Stream 4 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CFEIF4 LL_DMA_ClearFlag_FE4

LL_DMA_ClearFlag_FE5

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_FE5 (DMA_TypeDef * DMAx)

Function description

Clear Stream 5 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CFEIF5 LL_DMA_ClearFlag_FE5

LL_DMA_ClearFlag_FE6

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_FE6 (DMA_TypeDef * DMAx)

Function description

Clear Stream 6 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CFEIF6 LL_DMA_ClearFlag_FE6

LL_DMA_ClearFlag_FE7

Function name

__STATIC_INLINE void LL_DMA_ClearFlag_FE7 (DMA_TypeDef * DMAx)

Function description

Clear Stream 7 FIFO error flag.

Parameters

- **DMAx:** DMAx Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- HIFCR CFEIF7 LL_DMA_ClearFlag_FE7

LL_DMA_EnableIT_HT

Function name

__STATIC_INLINE void LL_DMA_EnableIT_HT (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Enable Half transfer interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HTIE LL_DMA_EnableIT_HT

LL_DMA_EnableIT_TE

Function name

__STATIC_INLINE void LL_DMA_EnableIT_TE (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Enable Transfer error interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TEIE LL_DMA_EnableIT_TE

LL_DMA_EnableIT_TC

Function name

__STATIC_INLINE void LL_DMA_EnableIT_TC (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Enable Transfer complete interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TCIE LL_DMA_EnableIT_TC

LL_DMA_EnableIT_DME

Function name

__STATIC_INLINE void LL_DMA_EnableIT_DME (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Enable Direct mode error interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5

Reference Manual to LL API cross reference:

- CR HTIE LL_DMA_DisableIT_HT

LL_DMA_DisableIT_TE

Function name

__STATIC_INLINE void LL_DMA_DisableIT_TE (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Disable Transfer error interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TEIE LL_DMA_DisableIT_TE

LL_DMA_DisableIT_TC

Function name

__STATIC_INLINE void LL_DMA_DisableIT_TC (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Disable Transfer complete interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TCIE LL_DMA_DisableIT_TC

LL_DMA_DisableIT_DME

Function name

__STATIC_INLINE void LL_DMA_DisableIT_DME (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Disable Direct mode error interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DMEIE LL_DMA_DisableIT_DME

LL_DMA_DisableIT_FE

Function name

__STATIC_INLINE void LL_DMA_DisableIT_FE (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Disable FIFO error interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- FCR FEIE LL_DMA_DisableIT_FE

LL_DMA_IsEnabledIT_HT

Function name

__STATIC_INLINE uint32_t LL_DMA_IsEnabledIT_HT (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Check if Half transfer interrupt is enabled.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HTIE LL_DMA_IsEnabledIT_HT

LL_DMA_IsEnabledIT_TE

Function name

__STATIC_INLINE uint32_t LL_DMA_IsEnabledIT_TE (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Check if Transfer error nterrup is enabled.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR TEIE LL_DMA_IsEnabledIT_TE

LL_DMA_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_DMA_IsEnabledIT_TC (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Check if Transfer complete interrupt is enabled.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR TCIE LL_DMA_IsEnabledIT_TC

LL_DMA_IsEnabledIT_DME

Function name

__STATIC_INLINE uint32_t LL_DMA_IsEnabledIT_DME (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Check if Direct mode error interrupt is enabled.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR DMEIE LL_DMA_IsEnabledIT_DME

LL_DMA_IsEnabledIT_FE

Function name

__STATIC_INLINE uint32_t LL_DMA_IsEnabledIT_FE (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

Check if FIFO error interrupt is enabled.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- FCR FEIE LL_DMA_IsEnabledIT_FE

LL_DMA_Init

Function name

uint32_t LL_DMA_Init (DMA_TypeDef * DMAx, uint32_t Stream, LL_DMA_InitTypeDef * DMA_InitStruct)

Function description

Initialize the DMA registers according to the specified parameters in DMA_InitStruct.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7
- **DMA_InitStruct:** pointer to a LL_DMA_InitTypeDef structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: DMA registers are initialized
  - ERROR: Not applicable

Notes

- To convert DMAx_Streamy Instance to DMAx Instance and Streamy, use helper macros : __LL_DMA_GET_INSTANCE __LL_DMA_GET_STREAM

LL_DMA_DeInit

Function name

uint32_t LL_DMA_DeInit (DMA_TypeDef * DMAx, uint32_t Stream)

Function description

De-initialize the DMA registers to their default reset values.

Parameters

- **DMAx:** DMAx Instance
- **Stream:** This parameter can be one of the following values:
  - LL_DMA_STREAM_0
  - LL_DMA_STREAM_1
  - LL_DMA_STREAM_2
  - LL_DMA_STREAM_3
  - LL_DMA_STREAM_4
  - LL_DMA_STREAM_5
  - LL_DMA_STREAM_6
  - LL_DMA_STREAM_7
  - LL_DMA_STREAM_ALL

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: DMA registers are de-initialized
  - ERROR: DMA registers are not de-initialized

LL_DMA_StructInit

Function name

void LL_DMA_StructInit (LL_DMA_InitTypeDef * DMA_InitStruct)

Function description

Set each LL_DMA_InitTypeDef field to default value.

Parameters

- **DMA_InitStruct:** Pointer to a LL_DMA_InitTypeDef structure.

Return values

- **None:**

107.3 DMA Firmware driver defines

The following section lists the various define and macros of the module.

107.3.1 DMA

DMA

CURRENTTARGETMEM

LL_BDMA_CURRENTTARGETMEM0

Set CurrentTarget Memory to Memory 0

LL_BDMA_CURRENTTARGETMEM1

Set CurrentTarget Memory to Memory 1

LL_DMA_CURRENTTARGETMEM0

Set CurrentTarget Memory to Memory 0

LL_DMA_CURRENTTARGETMEM1

Set CurrentTarget Memory to Memory 1

DIRECTION

LL_DMA_DIRECTION_PERIPH_TO_MEMORY

Peripheral to memory direction

LL_DMA_DIRECTION_MEMORY_TO_PERIPH

Memory to peripheral direction

LL_DMA_DIRECTION_MEMORY_TO_MEMORY

Memory to memory direction

DOUBLE BUFFER MODE

LL_BDMA_DOUBLEBUFFER_MODE_DISABLE

Disable double buffering mode

LL_BDMA_DOUBLEBUFFER_MODE_ENABLE

Enable double buffering mode

LL_DMA_DOUBLEBUFFER_MODE_DISABLE

Disable double buffering mode

LL_DMA_DOUBLEBUFFER_MODE_ENABLE

Enable double buffering mode

FIFOSTATUS 0

LL_DMA_FIFOSTATUS_0_25

0 < fifo_level < 1/4

LL_DMA_FIFOSTATUS_25_50

1/4 < fifo_level < 1/2

LL_DMA_FIFOSTATUS_50_75

1/2 < fifo_level < 3/4

LL_DMA_FIFOSTATUS_75_100

3/4 < fifo_level < full

LL_DMA_FIFOSTATUS_EMPTY

FIFO is empty

LL_DMA_FIFOSTATUS_FULL

FIFO is full

FIFOTHRESHOLD

LL_DMA_FIFOTHRESHOLD_1_4

FIFO threshold 1 quart full configuration

LL_DMA_FIFOTHRESHOLD_1_2

FIFO threshold half full configuration

LL_DMA_FIFOTHRESHOLD_3_4

FIFO threshold 3 quarts full configuration

LL_DMA_FIFOTHRESHOLD_FULL

FIFO threshold full configuration

MBURST

LL_DMA_MBURST_SINGLE

Memory burst single transfer configuration

LL_DMA_MBURST_INC4

Memory burst of 4 beats transfer configuration

LL_DMA_MBURST_INC8

Memory burst of 8 beats transfer configuration

LL_DMA_MBURST_INC16

Memory burst of 16 beats transfer configuration

MDATAALIGN

LL_DMA_MDATAALIGN_BYTE

Memory data alignment : Byte

LL_DMA_MDATAALIGN_HALFWORD

Memory data alignment : HalfWord

LL_DMA_MDATAALIGN_WORD

Memory data alignment : Word

MEMORY

LL_DMA_MEMORY_NOINCREMENT

Memory increment mode Disable

LL_DMA_MEMORY_INCREMENT

Memory increment mode Enable

MODE

LL_DMA_MODE_NORMAL

Normal Mode

LL_DMA_MODE_CIRCULAR

Circular Mode

LL_DMA_MODE_PFCTRL

Peripheral flow control mode

OFFSETSIZE

LL_DMA_OFFSETSIZE_PSIZE

Peripheral increment offset size is linked to the PSIZE

LL_DMA_OFFSETSIZE_FIXEDTO4

Peripheral increment offset size is fixed to 4 (32-bit alignment)

PBURST

LL_DMA_PBURST_SINGLE

Peripheral burst single transfer configuration

LL_DMA_PBURST_INC4

Peripheral burst of 4 beats transfer configuration

LL_DMA_PBURST_INC8

Peripheral burst of 8 beats transfer configuration

LL_DMA_PBURST_INC16

Peripheral burst of 16 beats transfer configuration

PDATAALIGN

LL_DMA_PDATAALIGN_BYTE

Peripheral data alignment : Byte

LL_DMA_PDATAALIGN_HALFWORD

Peripheral data alignment : HalfWord

LL_DMA_PDATAALIGN_WORD

Peripheral data alignment : Word

PERIPH

LL_DMA_PERIPH_NOINCREMENT

Peripheral increment mode Disable

LL_DMA_PERIPH_INCREMENT

Peripheral increment mode Enable

PRIORITY

LL_DMA_PRIORITY_LOW

Priority level : Low

LL_DMA_PRIORITY_MEDIUM

Priority level : Medium

LL_DMA_PRIORITY_HIGH

Priority level : High

LL_DMA_PRIORITY_VERYHIGH

Priority level : Very_High

STREAM

LL_DMA_STREAM_0

LL_DMA_STREAM_1

LL_DMA_STREAM_2

LL_DMA_STREAM_3

LL_DMA_STREAM_4

LL_DMA_STREAM_5

LL_DMA_STREAM_6

LL_DMA_STREAM_7

LL_DMA_STREAM_ALL

Convert DMAxStreamy

__LL_DMA_GET_INSTANCE

Description:

- Convert DMAx_Streamy into DMAx.

Parameters:

- __STREAM_INSTANCE__: DMAx_Streamy

Return value:

- DMAx

__LL_DMA_GET_STREAM

Description:

- Convert DMAx_Streamy into LL_DMA_STREAM_y.

Parameters:

- __STREAM_INSTANCE__: DMAx_Streamy

Return value:

- LL_DMA_STREAM_y

__LL_DMA_GET_STREAM_INSTANCE

Description:

- Convert DMA Instance DMAx and LL_DMA_STREAM_y into DMAx_Streamy.

Parameters:

- __DMA_INSTANCE__: DMAx
- __STREAM__: LL_DMA_STREAM_y

Return value:

- DMAx_Streamy

Common Write and read registers macros

LL_DMA_WriteReg

Description:

- Write a value in DMA register.

Parameters:

- __INSTANCE__: DMA Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_DMA_ReadReg

Description:

- Read a value in DMA register.

Parameters:

- __INSTANCE__: DMA Instance
- __REG__: Register to be read

Return value:

- Register: value

DMA_LL_FIFOMODE

LL_DMA_FIFOMODE_DISABLE

FIFO mode disable (direct mode is enabled)

LL_DMA_FIFOMODE_ENABLE

FIFO mode enable

108 LL EXTI Generic Driver

108.1 EXTI Firmware driver registers structures

108.1.1 LL_EXTI_InitTypeDef

LL_EXTI_InitTypeDef is defined in the stm32h7xx_ll_exti.h

Data Fields

- ***uint32_t Line_0_31***
- ***uint32_t Line_32_63***
- ***uint32_t Line_64_95***
- ***FunctionalState LineCommand***
- ***uint8_t Mode***
- ***uint8_t Trigger***

Field Documentation

- ***uint32_t LL_EXTI_InitTypeDef::Line_0_31***
  Specifies the EXTI lines to be enabled or disabled for Lines in range 0 to 31 This parameter can be any combination of ***EXTI_LL_EC_LINE***
- ***uint32_t LL_EXTI_InitTypeDef::Line_32_63***
  Specifies the EXTI lines to be enabled or disabled for Lines in range 32 to 63 This parameter can be any combination of ***EXTI_LL_EC_LINE***
- ***uint32_t LL_EXTI_InitTypeDef::Line_64_95***
  Specifies the EXTI lines to be enabled or disabled for Lines in range 64 to 95 This parameter can be any combination of ***EXTI_LL_EC_LINE***
- ***FunctionalState LL_EXTI_InitTypeDef::LineCommand***
  Specifies the new state of the selected EXTI lines. This parameter can be set either to ENABLE or DISABLE
- ***uint8_t LL_EXTI_InitTypeDef::Mode***
  Specifies the mode for the EXTI lines. This parameter can be a value of ***EXTI_LL_EC_MODE***.
- ***uint8_t LL_EXTI_InitTypeDef::Trigger***
  Specifies the trigger signal active edge for the EXTI lines. This parameter can be a value of ***EXTI_LL_EC_TRIGGER***.

108.2 EXTI Firmware driver API description

The following section lists the various functions of the EXTI library.

108.2.1 Detailed description of functions

LL_EXTI_EnableIT_0_31

Function name

__STATIC_INLINE void LL_EXTI_EnableIT_0_31 (uint32_t ExtiLine)

Function description

Enable ExtiLine Interrupt request for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22
  - LL_EXTI_LINE_23
  - LL_EXTI_LINE_24
  - LL_EXTI_LINE_25
  - LL_EXTI_LINE_26
  - LL_EXTI_LINE_27
  - LL_EXTI_LINE_28
  - LL_EXTI_LINE_29
  - LL_EXTI_LINE_30
  - LL_EXTI_LINE_31
  - LL_EXTI_LINE_ALL_0_31

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR1 IMx LL_EXTI_EnableIT_0_31

LL_EXTI_EnableIT_32_63

Function name

__STATIC_INLINE void LL_EXTI_EnableIT_32_63 (uint32_t ExtiLine)

Function description

Enable ExtiLine Interrupt request for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_32
  - LL_EXTI_LINE_33
  - LL_EXTI_LINE_34
  - LL_EXTI_LINE_35
  - LL_EXTI_LINE_36
  - LL_EXTI_LINE_37
  - LL_EXTI_LINE_38
  - LL_EXTI_LINE_39
  - LL_EXTI_LINE_40
  - LL_EXTI_LINE_41
  - LL_EXTI_LINE_42
  - LL_EXTI_LINE_43
  - LL_EXTI_LINE_44 (*)
  - LL_EXTI_LINE_46 (*)
  - LL_EXTI_LINE_47
  - LL_EXTI_LINE_48
  - LL_EXTI_LINE_49
  - LL_EXTI_LINE_50
  - LL_EXTI_LINE_51
  - LL_EXTI_LINE_52
  - LL_EXTI_LINE_53
  - LL_EXTI_LINE_54
  - LL_EXTI_LINE_55
  - LL_EXTI_LINE_56
  - LL_EXTI_LINE_57 (*)
  - LL_EXTI_LINE_58
  - LL_EXTI_LINE_59 (*)
  - LL_EXTI_LINE_60
  - LL_EXTI_LINE_61
  - LL_EXTI_LINE_62
  - LL_EXTI_LINE_63
  - LL_EXTI_LINE_ALL_32_63

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR2 IMx LL_EXTI_EnableIT_32_63

LL_EXTI_EnableIT_64_95

Function name

__STATIC_INLINE void LL_EXTI_EnableIT_64_95 (uint32_t ExtiLine)

Function description

Enable ExtiLine Interrupt request for Lines in range 64 to 95.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_64
  - LL_EXTI_LINE_65
  - LL_EXTI_LINE_66
  - LL_EXTI_LINE_67
  - LL_EXTI_LINE_68
  - LL_EXTI_LINE_69
  - LL_EXTI_LINE_70
  - LL_EXTI_LINE_71
  - LL_EXTI_LINE_72
  - LL_EXTI_LINE_73
  - LL_EXTI_LINE_74
  - LL_EXTI_LINE_75 (*)
  - LL_EXTI_LINE_76 (*)
  - LL_EXTI_LINE_77 (**)
  - LL_EXTI_LINE_78 (**)
  - LL_EXTI_LINE_79 (**)
  - LL_EXTI_LINE_80 (**)
  - LL_EXTI_LINE_82 (**)
  - LL_EXTI_LINE_84 (**)
  - LL_EXTI_LINE_85
  - LL_EXTI_LINE_86 (*)
  - LL_EXTI_LINE_87
  - LL_EXTI_LINE_88 (*)
  - LL_EXTI_LINE_89 (*)
  - LL_EXTI_LINE_90 (*)
  - LL_EXTI_LINE_91 (*)
  - LL_EXTI_LINE_ALL_64_95

  (*) value not defined in all devices. (**) value only defined in dual core devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR3 IMx LL_EXTI_EnableIT_64_95

LL_EXTI_DisableIT_0_31

Function name

__STATIC_INLINE void LL_EXTI_DisableIT_0_31 (uint32_t ExtiLine)

Function description

Disable ExtiLine Interrupt request for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22
  - LL_EXTI_LINE_23
  - LL_EXTI_LINE_24
  - LL_EXTI_LINE_25
  - LL_EXTI_LINE_26
  - LL_EXTI_LINE_27
  - LL_EXTI_LINE_28
  - LL_EXTI_LINE_29
  - LL_EXTI_LINE_30
  - LL_EXTI_LINE_31
  - LL_EXTI_LINE_ALL_0_31

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR1 IMx LL_EXTI_DisableIT_0_31

LL_EXTI_DisableIT_32_63

Function name

__STATIC_INLINE void LL_EXTI_DisableIT_32_63 (uint32_t ExtiLine)

Function description

Disable ExtiLine Interrupt request for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_32
  - LL_EXTI_LINE_33
  - LL_EXTI_LINE_34
  - LL_EXTI_LINE_35
  - LL_EXTI_LINE_36
  - LL_EXTI_LINE_37

  - LL_EXTI_LINE_90 (*)
  - LL_EXTI_LINE_91 (*)
  - LL_EXTI_LINE_ALL_64_95

  (*) value not defined in all devices. (**) value only defined in dual core devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- IMR3 IMx LL_EXTI_DisableIT_64_95

LL_EXTI_IsEnabledIT_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_IsEnabledIT_0_31 (uint32_t ExtiLine)

Function description

Indicate if ExtiLine Interrupt request is enabled for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6

__STATIC_INLINE void LL_C2_EXTI_DisableIT_64_95 (uint32_t ExtiLine)

Function description

Disable ExtiLine Interrupt request for Lines in range 64 to 95 for cpu2.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_64
  - LL_EXTI_LINE_65
  - LL_EXTI_LINE_66
  - LL_EXTI_LINE_67
  - LL_EXTI_LINE_68
  - LL_EXTI_LINE_69
  - LL_EXTI_LINE_70
  - LL_EXTI_LINE_71
  - LL_EXTI_LINE_72
  - LL_EXTI_LINE_73
  - LL_EXTI_LINE_74
  - LL_EXTI_LINE_75
  - LL_EXTI_LINE_76
  - LL_EXTI_LINE_77
  - LL_EXTI_LINE_78
  - LL_EXTI_LINE_79
  - LL_EXTI_LINE_80
  - LL_EXTI_LINE_82
  - LL_EXTI_LINE_84
  - LL_EXTI_LINE_85
  - LL_EXTI_LINE_86
  - LL_EXTI_LINE_87
  - LL_EXTI_LINE_ALL_64_95

Return values

- **None:**

Reference Manual to LL API cross reference:

- C2IMR3 IMx LL_C2_EXTI_DisableIT_64_95

LL_C2_EXTI_IsEnabledIT_0_31

Function name

__STATIC_INLINE uint32_t LL_C2_EXTI_IsEnabledIT_0_31 (uint32_t ExtiLine)

Function description

Indicate if ExtiLine Interrupt request is enabled for Lines in range 0 to 31 for cpu2.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_22
  - LL_EXTI_LINE_23
  - LL_EXTI_LINE_24
  - LL_EXTI_LINE_25
  - LL_EXTI_LINE_26
  - LL_EXTI_LINE_27
  - LL_EXTI_LINE_28
  - LL_EXTI_LINE_29
  - LL_EXTI_LINE_30
  - LL_EXTI_LINE_31
  - LL_EXTI_LINE_ALL_0_31

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- C2IMR1 IMx LL_C2_EXTI_IsEnabledIT_0_31

LL_C2_EXTI_IsEnabledIT_32_63

Function name

__STATIC_INLINE uint32_t LL_C2_EXTI_IsEnabledIT_32_63 (uint32_t ExtiLine)

Function description

Indicate if ExtiLine Interrupt request is enabled for Lines in range 32 to 63 for cpu2.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_32
  - LL_EXTI_LINE_33
  - LL_EXTI_LINE_34
  - LL_EXTI_LINE_35

  - LL_EXTI_LINE_17
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21

Return values

- **None:**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a rising edge on a configurable interrupt line occurs during a write operation in the EXTI_RTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.

Reference Manual to LL API cross reference:

If a Falling edge on a configurable interrupt line occurs during a write operation in the EXTI_FTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.
- Please check each device line mapping for EXTI Line availability

Reference Manual to LL API cross reference:

- FTSR1 FTx LL_EXTI_DisableFallingTrig_0_31

LL_EXTI_DisableFallingTrig_32_63

Function name

__STATIC_INLINE void LL_EXTI_DisableFallingTrig_32_63 (uint32_t ExtiLine)

Function description

Disable ExtiLine Falling Edge Trigger for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_49
  - LL_EXTI_LINE_51

Return values

- **None:**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a Falling edge on a configurable interrupt line occurs during a write operation in the EXTI_FTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.

Reference Manual to LL API cross reference:

- FTSR2 FTx LL_EXTI_DisableFallingTrig_32_63

LL_EXTI_DisableFallingTrig_64_95

Function name

__STATIC_INLINE void LL_EXTI_DisableFallingTrig_64_95 (uint32_t ExtiLine)

Function description

Disable ExtiLine Falling Edge Trigger for Lines in range 64 to 95.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_82 (*)
  - LL_EXTI_LINE_84 (*)
  - LL_EXTI_LINE_85
  - LL_EXTI_LINE_86 (**)

  (*) value only defined in dual core devices. (**) value not defined in all devices.

Return values

- **None:**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a Falling edge on a configurable interrupt line occurs during a write operation in the EXTI_FTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.

Reference Manual to LL API cross reference:

- FTSR3 FTx LL_EXTI_DisableFallingTrig_64_95

LL_EXTI_IsEnabledFallingTrig_0_31

Function name

__STATIC_INLINE uint32_t LL_EXTI_IsEnabledFallingTrig_0_31 (uint32_t ExtiLine)

Function description

Check if falling edge trigger is enabled for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11

LL_EXTI_GenerateSWI_0_31

Function name

__STATIC_INLINE void LL_EXTI_GenerateSWI_0_31 (uint32_t ExtiLine)

Function description

Generate a software Interrupt Event for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_16
  - LL_EXTI_LINE_18
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21

Return values

- **None:**

Notes

- If the interrupt is enabled on this line in the EXTI_C1IMR1, writing a 1 to this bit when it is at '0' sets the corresponding pending bit in EXTI_PR1 resulting in an interrupt request generation. This bit is cleared by clearing the corresponding bit in the EXTI_PR1 register (by writing a 1 into the bit)
- Please check each device line mapping for EXTI Line availability

- C2PR3 PIFx LL_C2_EXTI_ClearFlag_64_95

LL_D3_EXTI_EnablePendMask_0_31

Function name

__STATIC_INLINE void LL_D3_EXTI_EnablePendMask_0_31 (uint32_t ExtiLine)

Function description

Enable ExtiLine D3 Pending Mask for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_25

Return values

- **None:**

Reference Manual to LL API cross reference:

- D3PMR1 MRx LL_D3_EXTI_EnablePendMask_0_31

LL_D3_EXTI_EnablePendMask_32_63

Function name

__STATIC_INLINE void LL_D3_EXTI_EnablePendMask_32_63 (uint32_t ExtiLine)

Function description

Enable ExtiLine D3 Pending Mask for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_34
  - LL_EXTI_LINE_35
  - LL_EXTI_LINE_41
  - LL_EXTI_LINE_48
  - LL_EXTI_LINE_49
  - LL_EXTI_LINE_50
  - LL_EXTI_LINE_51
  - LL_EXTI_LINE_52
  - LL_EXTI_LINE_53

Return values

- **None:**

Reference Manual to LL API cross reference:

- D3PMR2 MRx LL_D3_EXTI_EnablePendMask_32_63

LL_D3_EXTI_DisablePendMask_0_31

Function name

__STATIC_INLINE void LL_D3_EXTI_DisablePendMask_0_31 (uint32_t ExtiLine)

Function description

Disable ExtiLine D3 Pending Mask for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_25

Return values

- **None:**

Reference Manual to LL API cross reference:

- D3PMR1 MRx LL_D3_EXTI_DisablePendMask_0_31

LL_D3_EXTI_DisablePendMask_32_63

Function name

__STATIC_INLINE void LL_D3_EXTI_DisablePendMask_32_63 (uint32_t ExtiLine)

Function description

Disable ExtiLine D3 Pending Mask for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_34
  - LL_EXTI_LINE_35
  - LL_EXTI_LINE_41
  - LL_EXTI_LINE_48
  - LL_EXTI_LINE_49
  - LL_EXTI_LINE_50
  - LL_EXTI_LINE_51
  - LL_EXTI_LINE_52
  - LL_EXTI_LINE_53

Return values

- **None:**

Reference Manual to LL API cross reference:

- D3PMR2 MRx LL_D3_EXTI_DisablePendMask_32_63

LL_D3_EXTI_IsEnabledPendMask_0_31

Function name

__STATIC_INLINE uint32_t LL_D3_EXTI_IsEnabledPendMask_0_31 (uint32_t ExtiLine)

Function description

Indicate if ExtiLine D3 Pending Mask is enabled for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7
  - LL_EXTI_LINE_8
  - LL_EXTI_LINE_9
  - LL_EXTI_LINE_10
  - LL_EXTI_LINE_11
  - LL_EXTI_LINE_12
  - LL_EXTI_LINE_13
  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_25

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- D3PMR1 MRx LL_D3_EXTI_IsEnabledPendMask_0_31

LL_D3_EXTI_IsEnabledPendMask_32_63

Function name

__STATIC_INLINE uint32_t LL_D3_EXTI_IsEnabledPendMask_32_63 (uint32_t ExtiLine)

Function description

Indicate if ExtiLine D3 Pending Mask is enabled for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_34
  - LL_EXTI_LINE_35
  - LL_EXTI_LINE_41
  - LL_EXTI_LINE_48
  - LL_EXTI_LINE_49
  - LL_EXTI_LINE_50
  - LL_EXTI_LINE_51
  - LL_EXTI_LINE_52
  - LL_EXTI_LINE_53

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- D3PMR2 MRx LL_D3_EXTI_IsEnabledPendMask_32_63

LL_D3_EXTI_SetPendClearSel_0_15

Function name

__STATIC_INLINE void LL_D3_EXTI_SetPendClearSel_0_15 (uint32_t ExtiLine, uint32_t ClrSrc)

Function description

Set ExtLine D3 Domain Pend Clear Source selection for Lines in range 0 to 15.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_0
  - LL_EXTI_LINE_1
  - LL_EXTI_LINE_2
  - LL_EXTI_LINE_3
  - LL_EXTI_LINE_4
  - LL_EXTI_LINE_5
  - LL_EXTI_LINE_6
  - LL_EXTI_LINE_7

  - LL_EXTI_LINE_14
  - LL_EXTI_LINE_15
- **ClrSrc:** This parameter can be one of the following values:
  - LL_EXTI_D3_PEND_CLR_DMACH6
  - LL_EXTI_D3_PEND_CLR_DMACH7
  - LL_EXTI_D3_PEND_CLR_LPTIM4 (*)
  - LL_EXTI_D3_PEND_CLR_LPTIM5 (*)
  - LL_EXTI_D3_PEND_CLR_LPTIM2 (*)
  - LL_EXTI_D3_PEND_CLR_LPTIM3 (*)

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- D3PCR1L PCSx LL_D3_EXTI_SetPendClearSel_0_15

LL_D3_EXTI_SetPendClearSel_16_31

Function name

__STATIC_INLINE void LL_D3_EXTI_SetPendClearSel_16_31 (uint32_t ExtiLine, uint32_t ClrSrc)

Function description

Set ExtLine D3 Domain Pend Clear Source selection for Lines in range 16 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL_EXTI_LINE_19
  - LL_EXTI_LINE_20
  - LL_EXTI_LINE_21
  - LL_EXTI_LINE_25
- **ClrSrc:** This parameter can be one of the following values:
  - LL_EXTI_D3_PEND_CLR_DMACH6
  - LL_EXTI_D3_PEND_CLR_DMACH7
  - LL_EXTI_D3_PEND_CLR_LPTIM4 (*)
  - LL_EXTI_D3_PEND_CLR_LPTIM5 (*)
  - LL_EXTI_D3_PEND_CLR_LPTIM2 (*)
  - LL_EXTI_D3_PEND_CLR_LPTIM3 (*)

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

LL_EXTI_Init

Function name

ErrorStatus LL_EXTI_Init (LL_EXTI_InitTypeDef * EXTI_InitStruct)

Function description

Initialize the EXTI registers according to the specified parameters in EXTI_InitStruct.

Parameters

- **EXTI_InitStruct:** pointer to a LL_EXTI_InitTypeDef structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: EXTI registers are initialized
  - ERROR: not applicable

LL_EXTI_DeInit

Function name

ErrorStatus LL_EXTI_DeInit (void)

Function description

De-initialize the EXTI registers to their default reset values.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: EXTI registers are de-initialized
  - ERROR: not applicable

LL_EXTI_StructInit

Function name

void LL_EXTI_StructInit (LL_EXTI_InitTypeDef * EXTI_InitStruct)

Function description

Set each LL_EXTI_InitTypeDef field to default value.

Parameters

- **EXTI_InitStruct:** Pointer to a LL_EXTI_InitTypeDef structure.

Return values

- **None:**

Common Write and read registers Macros

LL_EXTI_WriteReg

Description:

- Write a value in EXTI register.

Parameters:

- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_EXTI_ReadReg

Description:

- Read a value in EXTI register.

Parameters:

- __REG__: Register to be read

Return value:

- Register: value

109 LL FMAC Generic Driver

109.1 FMAC Firmware driver API description

The following section lists the various functions of the FMAC library.

109.1.1 Detailed description of functions

LL_FMAC_SetX1FullWatermark

Function name

__STATIC_INLINE void LL_FMAC_SetX1FullWatermark (FMAC_TypeDef * FMACx, uint32_t Watermark)

Function description

Configure X1 full watermark.

Parameters

- **FMACx:** FMAC instance
- **Watermark:** This parameter can be one of the following values:
  - LL_FMAC_WM_0_THRESHOLD_1
  - LL_FMAC_WM_1_THRESHOLD_2
  - LL_FMAC_WM_2_THRESHOLD_4
  - LL_FMAC_WM_3_THRESHOLD_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- X1BUFCFG FULL_WM LL_FMAC_SetX1FullWatermark

LL_FMAC_GetX1FullWatermark

Function name

__STATIC_INLINE uint32_t LL_FMAC_GetX1FullWatermark (FMAC_TypeDef * FMACx)

Function description

Return X1 full watermark.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** Returned value can be one of the following values:
  - LL_FMAC_WM_0_THRESHOLD_1
  - LL_FMAC_WM_1_THRESHOLD_2
  - LL_FMAC_WM_2_THRESHOLD_4
  - LL_FMAC_WM_3_THRESHOLD_8

Reference Manual to LL API cross reference:

- X1BUFCFG FULL_WM LL_FMAC_GetX1FullWatermark

LL_FMAC_SetX1BufferSize

Function name

__STATIC_INLINE void LL_FMAC_SetX1BufferSize (FMAC_TypeDef * FMACx, uint8_t BufferSize)

Function description

Configure X1 buffer size.

Parameters

- **FMACx:** FMAC instance
- **BufferSize:** Number of 16-bit words allocated to the input buffer (including the optional "headroom"). This parameter must be a number between Min_Data=0x01 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- X1BUFCFG X1_BUF_SIZE LL_FMAC_SetX1BufferSize

LL_FMAC_GetX1BufferSize

Function name

__STATIC_INLINE uint8_t LL_FMAC_GetX1BufferSize (FMAC_TypeDef * FMACx)

Function description

Return X1 buffer size.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint8_t:** Number of 16-bit words allocated to the input buffer (including the optional "headroom") (value between Min_Data=0x01 and Max_Data=0xFF).

Reference Manual to LL API cross reference:

- X1BUFCFG X1_BUF_SIZE LL_FMAC_GetX1BufferSize

LL_FMAC_SetX1Base

Function name

__STATIC_INLINE void LL_FMAC_SetX1Base (FMAC_TypeDef * FMACx, uint8_t Base)

Function description

Configure X1 base.

Parameters

- **FMACx:** FMAC instance
- **Base:** Base address of the input buffer (X1) within the internal memory. This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- X1BUFCFG X1_BASE LL_FMAC_SetX1Base

LL_FMAC_GetX1Base

Function name

__STATIC_INLINE uint8_t LL_FMAC_GetX1Base (FMAC_TypeDef * FMACx)

Function description

Return X1 base.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint8_t:** Base address of the input buffer (X1) within the internal memory (value between Min_Data=0x00 and Max_Data=0xFF).

Reference Manual to LL API cross reference:

- X1BUFCFG X1_BASE LL_FMAC_GetX1Base

LL_FMAC_SetX2BufferSize

Function name

__STATIC_INLINE void LL_FMAC_SetX2BufferSize (FMAC_TypeDef * FMACx, uint8_t BufferSize)

Function description

Configure X2 buffer size.

Parameters

- **FMACx:** FMAC instance
- **BufferSize:** Number of 16-bit words allocated to the coefficient buffer. This parameter must be a number between Min_Data=0x01 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- X2BUFCFG X2_BUF_SIZE LL_FMAC_SetX2BufferSize

LL_FMAC_GetX2BufferSize

Function name

__STATIC_INLINE uint8_t LL_FMAC_GetX2BufferSize (FMAC_TypeDef * FMACx)

Function description

Return X2 buffer size.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint8_t:** Number of 16-bit words allocated to the coefficient buffer (value between Min_Data=0x01 and Max_Data=0xFF).

Reference Manual to LL API cross reference:

- X2BUFCFG X2_BUF_SIZE LL_FMAC_GetX2BufferSize

LL_FMAC_SetX2Base

Function name

__STATIC_INLINE void LL_FMAC_SetX2Base (FMAC_TypeDef * FMACx, uint8_t Base)

Function description

Configure X2 base.

Parameters

- **FMACx:** FMAC instance
- **Base:** Base address of the coefficient buffer (X2) within the internal memory. This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- X2BUFCFG X2_BASE LL_FMAC_SetX2Base

LL_FMAC_GetX2Base

Function name

__STATIC_INLINE uint8_t LL_FMAC_GetX2Base (FMAC_TypeDef * FMACx)

Function description

Return X2 base.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint8_t:** Base address of the coefficient buffer (X2) within the internal memory (value between Min_Data=0x00 and Max_Data=0xFF).

Reference Manual to LL API cross reference:

- X2BUFCFG X2_BASE LL_FMAC_GetX2Base

LL_FMAC_SetYEmptyWatermark

Function name

__STATIC_INLINE void LL_FMAC_SetYEmptyWatermark (FMAC_TypeDef * FMACx, uint32_t Watermark)

Function description

Configure Y empty watermark.

Parameters

- **FMACx:** FMAC instance
- **Watermark:** This parameter can be one of the following values:
  - LL_FMAC_WM_0_THRESHOLD_1
  - LL_FMAC_WM_1_THRESHOLD_2
  - LL_FMAC_WM_2_THRESHOLD_4
  - LL_FMAC_WM_3_THRESHOLD_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- YBUFCFG EMPTY_WM LL_FMAC_SetYEmptyWatermark

LL_FMAC_GetYEmptyWatermark

Function name

__STATIC_INLINE uint32_t LL_FMAC_GetYEmptyWatermark (FMAC_TypeDef * FMACx)

Function description

Return Y empty watermark.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** Returned value can be one of the following values:
  - LL_FMAC_WM_0_THRESHOLD_1
  - LL_FMAC_WM_1_THRESHOLD_2
  - LL_FMAC_WM_2_THRESHOLD_4
  - LL_FMAC_WM_3_THRESHOLD_8

Reference Manual to LL API cross reference:

- YBUFCFG EMPTY_WM LL_FMAC_GetYEmptyWatermark

LL_FMAC_SetYBufferSize

Function name

__STATIC_INLINE void LL_FMAC_SetYBufferSize (FMAC_TypeDef * FMACx, uint8_t BufferSize)

Function description

Configure Y buffer size.

Parameters

- **FMACx:** FMAC instance
- **BufferSize:** Number of 16-bit words allocated to the output buffer (including the optional "headroom"). This parameter must be a number between Min_Data=0x01 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- YBUFCFG Y_BUF_SIZE LL_FMAC_SetYBufferSize

LL_FMAC_GetYBufferSize

Function name

__STATIC_INLINE uint8_t LL_FMAC_GetYBufferSize (FMAC_TypeDef * FMACx)

Function description

Return Y buffer size.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint8_t:** Number of 16-bit words allocated to the output buffer (including the optional "headroom" - value between Min_Data=0x01 and Max_Data=0xFF).

Reference Manual to LL API cross reference:

- YBUFCFG Y_BUF_SIZE LL_FMAC_GetYBufferSize

LL_FMAC_SetYBase

Function name

__STATIC_INLINE void LL_FMAC_SetYBase (FMAC_TypeDef * FMACx, uint8_t Base)

Function description

Configure Y base.

Parameters

- **FMACx:** FMAC instance
- **Base:** Base address of the output buffer (Y) within the internal memory. This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- YBUFCFG Y_BASE LL_FMAC_SetYBase

LL_FMAC_GetYBase

Function name

__STATIC_INLINE uint8_t LL_FMAC_GetYBase (FMAC_TypeDef * FMACx)

Function description

Return Y base.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint8_t:** Base address of the output buffer (Y) within the internal memory (value between Min_Data=0x00 and Max_Data=0xFF).

Reference Manual to LL API cross reference:

- YBUFCFG Y_BASE LL_FMAC_GetYBase

LL_FMAC_EnableStart

Function name

__STATIC_INLINE void LL_FMAC_EnableStart (FMAC_TypeDef * FMACx)

Function description

Start FMAC processing.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- PARAM START LL_FMAC_EnableStart

LL_FMAC_DisableStart

Function name

__STATIC_INLINE void LL_FMAC_DisableStart (FMAC_TypeDef * FMACx)

Function description

Stop FMAC processing.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- PARAM START LL_FMAC_DisableStart

LL_FMAC_IsEnabledStart

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledStart (FMAC_TypeDef * FMACx)

Function description

Check the state of FMAC processing.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- PARAM START LL_FMAC_IsEnabledStart

LL_FMAC_SetFunction

Function name

__STATIC_INLINE void LL_FMAC_SetFunction (FMAC_TypeDef * FMACx, uint32_t Function)

Function description

Configure function.

Parameters

- **FMACx:** FMAC instance
- **Function:** This parameter can be one of the following values:
  - LL_FMAC_FUNC_LOAD_X1
  - LL_FMAC_FUNC_LOAD_X2
  - LL_FMAC_FUNC_LOAD_Y
  - LL_FMAC_FUNC_CONVO_FIR
  - LL_FMAC_FUNC_IIR_DIRECT_FORM_1

Return values

- **None:**

Reference Manual to LL API cross reference:

- PARAM FUNC LL_FMAC_SetFunction

LL_FMAC_GetFunction

Function name

__STATIC_INLINE uint32_t LL_FMAC_GetFunction (FMAC_TypeDef * FMACx)

Function description

Return function.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** Returned value can be one of the following values:
  - LL_FMAC_FUNC_LOAD_X1
  - LL_FMAC_FUNC_LOAD_X2
  - LL_FMAC_FUNC_LOAD_Y
  - LL_FMAC_FUNC_CONVO_FIR
  - LL_FMAC_FUNC_IIR_DIRECT_FORM_1

Reference Manual to LL API cross reference:

- PARAM FUNC LL_FMAC_GetFunction

LL_FMAC_SetParamR

Function name

__STATIC_INLINE void LL_FMAC_SetParamR (FMAC_TypeDef * FMACx, uint8_t Param)

Function description

Configure input parameter R.

Parameters

- **FMACx:** FMAC instance
- **Param:** Parameter R (gain, etc.). This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PARAM R LL_FMAC_SetParamR

LL_FMAC_GetParamR

Function name

__STATIC_INLINE uint8_t LL_FMAC_GetParamR (FMAC_TypeDef * FMACx)

Function description

Return input parameter R.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint8_t:** Parameter R (gain, etc.) (value between Min_Data=0x00 and Max_Data=0xFF).

Reference Manual to LL API cross reference:

- PARAM R LL_FMAC_GetParamR

LL_FMAC_SetParamQ

Function name

__STATIC_INLINE void LL_FMAC_SetParamQ (FMAC_TypeDef * FMACx, uint8_t Param)

Function description

Configure input parameter Q.

Parameters

- **FMACx:** FMAC instance
- **Param:** Parameter Q (vector length, etc.). This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PARAM Q LL_FMAC_SetParamQ

LL_FMAC_GetParamQ

Function name

__STATIC_INLINE uint8_t LL_FMAC_GetParamQ (FMAC_TypeDef * FMACx)

Function description

Return input parameter Q.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint8_t:** Parameter Q (vector length, etc.) (value between Min_Data=0x00 and Max_Data=0xFF).

Reference Manual to LL API cross reference:

- PARAM Q LL_FMAC_GetParamQ

LL_FMAC_SetParamP

Function name

__STATIC_INLINE void LL_FMAC_SetParamP (FMAC_TypeDef * FMACx, uint8_t Param)

Function description

Configure input parameter P.

Parameters

- **FMACx:** FMAC instance
- **Param:** Parameter P (vector length, number of filter taps, etc.). This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PARAM P LL_FMAC_SetParamP

LL_FMAC_GetParamP

Function name

__STATIC_INLINE uint8_t LL_FMAC_GetParamP (FMAC_TypeDef * FMACx)

Function description

Return input parameter P.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint8_t:** Parameter P (vector length, number of filter taps, etc.) (value between Min_Data=0x00 and Max_Data=0xFF).

Reference Manual to LL API cross reference:

- PARAM P LL_FMAC_GetParamP

LL_FMAC_EnableReset

Function name

__STATIC_INLINE void LL_FMAC_EnableReset (FMAC_TypeDef * FMACx)

Function description

Start the FMAC reset.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RESET LL_FMAC_EnableReset

LL_FMAC_IsEnabledReset

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledReset (FMAC_TypeDef * FMACx)

Function description

Check the state of the FMAC reset.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RESET LL_FMAC_IsEnabledReset

LL_FMAC_EnableClipping

Function name

__STATIC_INLINE void LL_FMAC_EnableClipping (FMAC_TypeDef * FMACx)

Function description

Enable Clipping.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CLIPEN LL_FMAC_EnableClipping

LL_FMAC_DisableClipping

Function name

__STATIC_INLINE void LL_FMAC_DisableClipping (FMAC_TypeDef * FMACx)

Function description

Disable Clipping.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CLIPEN LL_FMAC_DisableClipping

LL_FMAC_IsEnabledClipping

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledClipping (FMAC_TypeDef * FMACx)

Function description

Check Clipping State.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CLIPEN LL_FMAC_IsEnabledClipping

LL_FMAC_EnableDMAReq_WRITE

Function name

__STATIC_INLINE void LL_FMAC_EnableDMAReq_WRITE (FMAC_TypeDef * FMACx)

Function description

Enable FMAC DMA write channel request.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DMAWEN LL_FMAC_EnableDMAReq_WRITE

LL_FMAC_DisableDMAReq_WRITE

Function name

__STATIC_INLINE void LL_FMAC_DisableDMAReq_WRITE (FMAC_TypeDef * FMACx)

Function description

Disable FMAC DMA write channel request.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DMAWEN LL_FMAC_DisableDMAReq_WRITE

LL_FMAC_IsEnabledDMAReq_WRITE

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledDMAReq_WRITE (FMAC_TypeDef * FMACx)

Function description

Check FMAC DMA write channel request state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR DMAWEN LL_FMAC_IsEnabledDMAReq_WRITE

LL_FMAC_EnableDMAReq_READ

Function name

__STATIC_INLINE void LL_FMAC_EnableDMAReq_READ (FMAC_TypeDef * FMACx)

Function description

Enable FMAC DMA read channel request.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DMAREN LL_FMAC_EnableDMAReq_READ

LL_FMAC_DisableDMAReq_READ

Function name

__STATIC_INLINE void LL_FMAC_DisableDMAReq_READ (FMAC_TypeDef * FMACx)

Function description

Disable FMAC DMA read channel request.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DMAREN LL_FMAC_DisableDMAReq_READ

LL_FMAC_IsEnabledDMAReq_READ

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledDMAReq_READ (FMAC_TypeDef * FMACx)

Function description

Check FMAC DMA read channel request state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR DMAREN LL_FMAC_IsEnabledDMAReq_READ

LL_FMAC_EnableIT_SAT

Function name

__STATIC_INLINE void LL_FMAC_EnableIT_SAT (FMAC_TypeDef * FMACx)

Function description

Enable FMAC saturation error interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SATIEN LL_FMAC_EnableIT_SAT

LL_FMAC_DisableIT_SAT

Function name

__STATIC_INLINE void LL_FMAC_DisableIT_SAT (FMAC_TypeDef * FMACx)

Function description

Disable FMAC saturation error interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SATIEN LL_FMAC_DisableIT_SAT

LL_FMAC_IsEnabledIT_SAT

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledIT_SAT (FMAC_TypeDef * FMACx)

Function description

Check FMAC saturation error interrupt state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR SATIEN LL_FMAC_IsEnabledIT_SAT

LL_FMAC_EnableIT_UNFL

Function name

__STATIC_INLINE void LL_FMAC_EnableIT_UNFL (FMAC_TypeDef * FMACx)

Function description

Enable FMAC underflow error interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR UNFLIEN LL_FMAC_EnableIT_UNFL

LL_FMAC_DisableIT_UNFL

Function name

__STATIC_INLINE void LL_FMAC_DisableIT_UNFL (FMAC_TypeDef * FMACx)

Function description

Disable FMAC underflow error interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR UNFLIEN LL_FMAC_DisableIT_UNFL

LL_FMAC_IsEnabledIT_UNFL

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledIT_UNFL (FMAC_TypeDef * FMACx)

Function description

Check FMAC underflow error interrupt state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR UNFLIEN LL_FMAC_IsEnabledIT_UNFL

LL_FMAC_EnableIT_OVFL

Function name

__STATIC_INLINE void LL_FMAC_EnableIT_OVFL (FMAC_TypeDef * FMACx)

Function description

Enable FMAC overflow error interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR OVFLIEN LL_FMAC_EnableIT_OVFL

LL_FMAC_DisableIT_OVFL

Function name

__STATIC_INLINE void LL_FMAC_DisableIT_OVFL (FMAC_TypeDef * FMACx)

Function description

Disable FMAC overflow error interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR OVFLIEN LL_FMAC_DisableIT_OVFL

LL_FMAC_IsEnabledIT_OVFL

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledIT_OVFL (FMAC_TypeDef * FMACx)

Function description

Check FMAC overflow error interrupt state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR OVFLIEN LL_FMAC_IsEnabledIT_OVFL

LL_FMAC_EnableIT_WR

Function name

__STATIC_INLINE void LL_FMAC_EnableIT_WR (FMAC_TypeDef * FMACx)

Function description

Enable FMAC write interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR WIEN LL_FMAC_EnableIT_WR

LL_FMAC_DisableIT_WR

Function name

__STATIC_INLINE void LL_FMAC_DisableIT_WR (FMAC_TypeDef * FMACx)

Function description

Disable FMAC write interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR WIEN LL_FMAC_DisableIT_WR

LL_FMAC_IsEnabledIT_WR

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledIT_WR (FMAC_TypeDef * FMACx)

Function description

Check FMAC write interrupt state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR WIEN LL_FMAC_IsEnabledIT_WR

LL_FMAC_EnableIT_RD

Function name

__STATIC_INLINE void LL_FMAC_EnableIT_RD (FMAC_TypeDef * FMACx)

Function description

Enable FMAC read interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RIEN LL_FMAC_EnableIT_RD

LL_FMAC_DisableIT_RD

Function name

__STATIC_INLINE void LL_FMAC_DisableIT_RD (FMAC_TypeDef * FMACx)

Function description

Disable FMAC read interrupt.

Parameters

- **FMACx:** FMAC instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RIEN LL_FMAC_DisableIT_RD

LL_FMAC_IsEnabledIT_RD

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsEnabledIT_RD (FMAC_TypeDef * FMACx)

Function description

Check FMAC read interrupt state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RIEN LL_FMAC_IsEnabledIT_RD

LL_FMAC_IsActiveFlag_SAT

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsActiveFlag_SAT (FMAC_TypeDef * FMACx)

Function description

Check FMAC saturation error flag state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SAT LL_FMAC_IsActiveFlag_SAT

LL_FMAC_IsActiveFlag_UNFL

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsActiveFlag_UNFL (FMAC_TypeDef * FMACx)

Function description

Check FMAC underflow error flag state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR UNFL LL_FMAC_IsActiveFlag_UNFL

LL_FMAC_IsActiveFlag_OVFL

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsActiveFlag_OVFL (FMAC_TypeDef * FMACx)

Function description

Check FMAC overflow error flag state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR OVFL LL_FMAC_IsActiveFlag_OVFL

LL_FMAC_IsActiveFlag_X1FULL

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsActiveFlag_X1FULL (FMAC_TypeDef * FMACx)

Function description

Check FMAC X1 buffer full flag state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR X1FULL LL_FMAC_IsActiveFlag_X1FULL

LL_FMAC_IsActiveFlag_YEMPTY

Function name

__STATIC_INLINE uint32_t LL_FMAC_IsActiveFlag_YEMPTY (FMAC_TypeDef * FMACx)

Function description

Check FMAC Y buffer empty flag state.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint32_t:** State of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR YEMPTY LL_FMAC_IsActiveFlag_YEMPTY

LL_FMAC_WriteData

Function name

__STATIC_INLINE void LL_FMAC_WriteData (FMAC_TypeDef * FMACx, uint16_t InData)

Function description

Write 16-bit input data for the FMAC processing.

Parameters

- **FMACx:** FMAC instance
- **InData:** 16-bit value to be provided as input data for FMAC processing. This parameter must be a number between Min_Data=0x0000 and Max_Data=0xFFFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WDATA WDATA LL_FMAC_WriteData

LL_FMAC_ReadData

Function name

__STATIC_INLINE uint16_t LL_FMAC_ReadData (FMAC_TypeDef * FMACx)

Function description

Return 16-bit output data of FMAC processing.

Parameters

- **FMACx:** FMAC instance

Return values

- **uint16_t:** 16-bit output data of FMAC processing (value between Min_Data=0x0000 and Max_Data=0xFFFF).

Reference Manual to LL API cross reference:

- RDATA RDATA LL_FMAC_ReadData

LL_FMAC_ConfigX1

Function name

__STATIC_INLINE void LL_FMAC_ConfigX1 (FMAC_TypeDef * FMACx, uint32_t Watermark, uint8_t Base, uint8_t BufferSize)

Function description

Configure memory for X1 buffer.

Parameters

- **FMACx:** FMAC instance
- **Watermark:** This parameter can be one of the following values:
  - LL_FMAC_WM_0_THRESHOLD_1
  - LL_FMAC_WM_1_THRESHOLD_2
  - LL_FMAC_WM_2_THRESHOLD_4
  - LL_FMAC_WM_3_THRESHOLD_8
- **Base:** Base address of the input buffer (X1) within the internal memory. This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.
- **BufferSize:** Number of 16-bit words allocated to the input buffer (including the optional "headroom"). This parameter must be a number between Min_Data=0x01 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- X1BUFCFG FULL_WM LL_FMAC_ConfigX1
- X1BUFCFG X1_BASE LL_FMAC_ConfigX1
- X1BUFCFG X1_BUF_SIZE LL_FMAC_ConfigX1

LL_FMAC_ConfigX2

Function name

__STATIC_INLINE void LL_FMAC_ConfigX2 (FMAC_TypeDef * FMACx, uint8_t Base, uint8_t BufferSize)

Function description

Configure memory for X2 buffer.

Parameters

- **FMACx:** FMAC instance
- **Base:** Base address of the coefficient buffer (X2) within the internal memory. This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.
- **BufferSize:** Number of 16-bit words allocated to the coefficient buffer. This parameter must be a number between Min_Data=0x01 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- X2BUFCFG X2_BASE LL_FMAC_ConfigX2
- X2BUFCFG X2_BUF_SIZE LL_FMAC_ConfigX2

LL_FMAC_ConfigY

Function name

__STATIC_INLINE void LL_FMAC_ConfigY (FMAC_TypeDef * FMACx, uint32_t Watermark, uint8_t Base, uint8_t BufferSize)

Function description

Configure memory for Y buffer.

Parameters

- **FMACx:** FMAC instance
- **Watermark:** This parameter can be one of the following values:
  - LL_FMAC_WM_0_THRESHOLD_1
  - LL_FMAC_WM_1_THRESHOLD_2
  - LL_FMAC_WM_2_THRESHOLD_4
  - LL_FMAC_WM_3_THRESHOLD_8
- **Base:** Base address of the output buffer (Y) within the internal memory. This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.
- **BufferSize:** Number of 16-bit words allocated to the output buffer (including the optional "headroom"). This parameter must be a number between Min_Data=0x01 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- YBUFCFG Y_BASE LL_FMAC_ConfigY
- YBUFCFG Y_BUF_SIZE LL_FMAC_ConfigY

LL_FMAC_ConfigFunc

Function name

__STATIC_INLINE void LL_FMAC_ConfigFunc (FMAC_TypeDef * FMACx, uint8_t Start, uint32_t Function, uint8_t ParamP, uint8_t ParamQ, uint8_t ParamR)

Function description

Configure the FMAC processing.

Parameters

- **FMACx:** FMAC instance
- **Start:** This parameter can be one of the following values:
  - LL_FMAC_PROCESSING_STOP
  - LL_FMAC_PROCESSING_START
- **Function:** This parameter can be one of the following values:
  - LL_FMAC_FUNC_LOAD_X1
  - LL_FMAC_FUNC_LOAD_X2
  - LL_FMAC_FUNC_LOAD_Y
  - LL_FMAC_FUNC_CONVO_FIR
  - LL_FMAC_FUNC_IIR_DIRECT_FORM_1
- **ParamP:** Parameter P (vector length, number of filter taps, etc.). This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.
- **ParamQ:** Parameter Q (vector length, etc.). This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.
- **ParamR:** Parameter R (gain, etc.). This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PARAM START LL_FMAC_ConfigFunc
- PARAM FUNC LL_FMAC_ConfigFunc
- PARAM P LL_FMAC_ConfigFunc
- PARAM Q LL_FMAC_ConfigFunc
- PARAM R LL_FMAC_ConfigFunc

LL_FMAC_Init

Function name

ErrorStatus LL_FMAC_Init (FMAC_TypeDef * FMACx)

Function description

Initialize FMAC peripheral registers to their default reset values.

Parameters

- **FMACx:** FMAC Instance

Return values

- **ErrorStatus:** enumeration value:
  - SUCCESS: FMAC registers are initialized
  - ERROR: FMAC registers are not initialized

LL_FMAC_DeInit

Function name

ErrorStatus LL_FMAC_DeInit (FMAC_TypeDef * FMACx)

Function description

De-Initialize FMAC peripheral registers to their default reset values.

Parameters

- **FMACx:** FMAC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: FMAC registers are de-initialized
  - ERROR: FMAC registers are not de-initialized

109.2 FMAC Firmware driver defines

The following section lists the various define and macros of the module.

109.2.1 FMAC

FMAC

FMAC functions

LL_FMAC_FUNC_LOAD_X1

Load X1 buffer

LL_FMAC_FUNC_LOAD_X2

Load X2 buffer

LL_FMAC_FUNC_LOAD_Y

Load Y buffer

LL_FMAC_FUNC_CONVO_FIR

Convolution (FIR filter)

LL_FMAC_FUNC_IIR_DIRECT_FORM_1

IIR filter (direct form 1)

Get Flag Defines

LL_FMAC_SR_SAT

Saturation Error Flag (this helps in debugging a filter)

LL_FMAC_SR_UNFL

Underflow Error Flag

LL_FMAC_SR_OVFL

Overflow Error Flag

LL_FMAC_SR_X1FULL

X1 Buffer Full Flag

LL_FMAC_SR_YEMPTY

Y Buffer Empty Flag

IT Defines

LL_FMAC_CR_SATIEN

Saturation Error Interrupt Enable (this helps in debugging a filter)

LL_FMAC_CR_UNFLIEN

Underflow Error Interrupt Enable

LL_FMAC_CR_OVFLIEN

Overflow Error Interrupt Enable

LL_FMAC_CR_WIEN

Write Interrupt Enable

LL_FMAC_CR_RIEN

Read Interrupt Enable

FMAC processing

LL_FMAC_PROCESSING_STOP

Stop FMAC Processing

LL_FMAC_PROCESSING_START

Start FMAC Processing

FMAC watermarks

LL_FMAC_WM_0_THRESHOLD_1

Buffer full/empty flag set if there is less than 1 free/unread space.

LL_FMAC_WM_1_THRESHOLD_2

Buffer full/empty flag set if there are less than 2 free/unread spaces.

LL_FMAC_WM_2_THRESHOLD_4

Buffer full/empty flag set if there are less than 4 free/unread spaces.

LL_FMAC_WM_3_THRESHOLD_8

Buffer full/empty flag set if there are less than 8 free/empty spaces.

Common Write and read registers Macros

LL_FMAC_WriteReg

Description:

- Write a value in FMAC register.

Parameters:

- __INSTANCE__: FMAC Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_FMAC_ReadReg

Description:

- Read a value in FMAC register.

Parameters:

- __INSTANCE__: FMAC Instance
- __REG__: Register to be read

Return value:

- Register: value

110 LL GPIO Generic Driver

110.1 GPIO Firmware driver registers structures

110.1.1 LL_GPIO_InitTypeDef

LL_GPIO_InitTypeDef is defined in the stm32h7xx_ll_gpio.h

Data Fields

- ***uint32_t Pin***
- ***uint32_t Mode***
- ***uint32_t Speed***
- ***uint32_t OutputType***
- ***uint32_t Pull***
- ***uint32_t Alternate***

Field Documentation

- ***uint32_t LL_GPIO_InitTypeDef::Pin***

  Specifies the GPIO pins to be configured. This parameter can be any value of ***GPIO_LL_EC_PIN***
- ***uint32_t LL_GPIO_InitTypeDef::Mode***

  Specifies the operating mode for the selected pins. This parameter can be a value of ***GPIO_LL_EC_MODE***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetPinMode()**.
- ***uint32_t LL_GPIO_InitTypeDef::Speed***

  Specifies the speed for the selected pins. This parameter can be a value of ***GPIO_LL_EC_SPEED***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetPinSpeed()**.
- ***uint32_t LL_GPIO_InitTypeDef::OutputType***

  Specifies the operating output type for the selected pins. This parameter can be a value of ***GPIO_LL_EC_OUTPUT***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetPinOutputType()**.
- ***uint32_t LL_GPIO_InitTypeDef::Pull***

  Specifies the operating Pull-up/Pull down for the selected pins. This parameter can be a value of ***GPIO_LL_EC_PULL***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetPinPull()**.
- ***uint32_t LL_GPIO_InitTypeDef::Alternate***

  Specifies the Peripheral to be connected to the selected pins. This parameter can be a value of ***GPIO_LL_EC_AF***.GPIO HW configuration can be modified afterwards using unitary function **LL_GPIO_SetAFPin_0_7()** and **LL_GPIO_SetAFPin_8_15()**.

110.2 GPIO Firmware driver API description

The following section lists the various functions of the GPIO library.

110.2.1 Detailed description of functions

LL_GPIO_SetPinMode

Function name

__STATIC_INLINE void LL_GPIO_SetPinMode (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Mode)

Function description

Configure gpio mode for a dedicated pin on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
- **Mode:** This parameter can be one of the following values:
  - LL_GPIO_MODE_INPUT
  - LL_GPIO_MODE_OUTPUT
  - LL_GPIO_MODE_ALTERNATE
  - LL_GPIO_MODE_ANALOG

Return values

- **None:**

Notes

- I/O mode can be Input mode, General purpose output, Alternate function mode or Analog.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- MODER MODEy LL_GPIO_SetPinMode

LL_GPIO_GetPinMode

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetPinMode (GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio mode for a dedicated pin on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_MODE_INPUT
  - LL_GPIO_MODE_OUTPUT
  - LL_GPIO_MODE_ALTERNATE
  - LL_GPIO_MODE_ANALOG

Notes

- I/O mode can be Input mode, General purpose output, Alternate function mode or Analog.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- MODER MODEy LL_GPIO_GetPinMode

LL_GPIO_SetPinOutputType

Function name

__STATIC_INLINE void LL_GPIO_SetPinOutputType (GPIO_TypeDef * GPIOx, uint32_t PinMask, uint32_t OutputType)

Function description

Configure gpio output type for several pins on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL
- **OutputType:** This parameter can be one of the following values:
  - LL_GPIO_OUTPUT_PUSHPULL
  - LL_GPIO_OUTPUT_OPENDRAIN

Return values

- **None:**

Notes

- Output type as to be set when gpio pin is in output or alternate modes. Possible type are Push-pull or Open-drain.

Reference Manual to LL API cross reference:

- OTYPER OTy LL_GPIO_SetPinOutputType

LL_GPIO_GetPinOutputType

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetPinOutputType (GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio output type for several pins on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_OUTPUT_PUSHPULL
  - LL_GPIO_OUTPUT_OPENDRAIN

Notes

- Output type as to be set when gpio pin is in output or alternate modes. Possible type are Push-pull or Open-drain.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- OTYPER OTy LL_GPIO_GetPinOutputType

LL_GPIO_SetPinSpeed

Function name

__STATIC_INLINE void LL_GPIO_SetPinSpeed (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Speed)

Function description

Configure gpio speed for a dedicated pin on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
- **Speed:** This parameter can be one of the following values:
  - LL_GPIO_SPEED_FREQ_LOW
  - LL_GPIO_SPEED_FREQ_MEDIUM
  - LL_GPIO_SPEED_FREQ_HIGH
  - LL_GPIO_SPEED_FREQ_VERY_HIGH

Return values

- **None:**

Notes

- I/O speed can be Low, Medium, Fast or High speed.
- Warning: only one pin can be passed as parameter.
- Refer to datasheet for frequency specifications and the power supply and load conditions for each speed.

Reference Manual to LL API cross reference:

- OSPEEDR OSPEEDy LL_GPIO_SetPinSpeed

LL_GPIO_GetPinSpeed

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetPinSpeed (GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio speed for a dedicated pin on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_SPEED_FREQ_LOW
  - LL_GPIO_SPEED_FREQ_MEDIUM
  - LL_GPIO_SPEED_FREQ_HIGH
  - LL_GPIO_SPEED_FREQ_VERY_HIGH

Notes

- I/O speed can be Low, Medium, Fast or High speed.
- Warning: only one pin can be passed as parameter.
- Refer to datasheet for frequency specifications and the power supply and load conditions for each speed.

Reference Manual to LL API cross reference:

- OSPEEDR OSPEEDy LL_GPIO_GetPinSpeed

LL_GPIO_SetPinPull

Function name

__STATIC_INLINE void LL_GPIO_SetPinPull (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Pull)

Function description

Configure gpio pull-up or pull-down for a dedicated pin on a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
- **Pull:** This parameter can be one of the following values:
  - LL_GPIO_PULL_NO
  - LL_GPIO_PULL_UP
  - LL_GPIO_PULL_DOWN

Return values

- **None:**

Notes

- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- PUPDR PUPDy LL_GPIO_SetPinPull

LL_GPIO_GetPinPull

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetPinPull (GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio pull-up or pull-down for a dedicated pin on a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_PULL_NO
  - LL_GPIO_PULL_UP
  - LL_GPIO_PULL_DOWN

Notes

- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- PUPDR PUPDy LL_GPIO_GetPinPull

LL_GPIO_SetAFPin_0_7

Function name

__STATIC_INLINE void LL_GPIO_SetAFPin_0_7 (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Alternate)

Function description

Configure gpio alternate function of a dedicated pin from 0 to 7 for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
- **Alternate:** This parameter can be one of the following values:
  - LL_GPIO_AF_0
  - LL_GPIO_AF_1
  - LL_GPIO_AF_2
  - LL_GPIO_AF_3
  - LL_GPIO_AF_4
  - LL_GPIO_AF_5
  - LL_GPIO_AF_6
  - LL_GPIO_AF_7
  - LL_GPIO_AF_8
  - LL_GPIO_AF_9
  - LL_GPIO_AF_10
  - LL_GPIO_AF_11
  - LL_GPIO_AF_12
  - LL_GPIO_AF_13
  - LL_GPIO_AF_14
  - LL_GPIO_AF_15

Return values

- **None:**

Notes

- Possible values are from AF0 to AF15 depending on target.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- AFRL AFSELy LL_GPIO_SetAFPin_0_7

LL_GPIO_GetAFPin_0_7

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetAFPin_0_7 (GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio alternate function of a dedicated pin from 0 to 7 for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_AF_0
  - LL_GPIO_AF_1
  - LL_GPIO_AF_2
  - LL_GPIO_AF_3
  - LL_GPIO_AF_4
  - LL_GPIO_AF_5
  - LL_GPIO_AF_6
  - LL_GPIO_AF_7
  - LL_GPIO_AF_8
  - LL_GPIO_AF_9
  - LL_GPIO_AF_10

Reference Manual to LL API cross reference:

- AFRL AFSELy LL_GPIO_GetAFPin_0_7

LL_GPIO_SetAFPin_8_15

Function name

__STATIC_INLINE void LL_GPIO_SetAFPin_8_15 (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Alternate)

Function description

Configure gpio alternate function of a dedicated pin from 8 to 15 for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
- **Alternate:** This parameter can be one of the following values:
  - LL_GPIO_AF_0
  - LL_GPIO_AF_1
  - LL_GPIO_AF_2
  - LL_GPIO_AF_3
  - LL_GPIO_AF_4
  - LL_GPIO_AF_5
  - LL_GPIO_AF_6
  - LL_GPIO_AF_7
  - LL_GPIO_AF_8
  - LL_GPIO_AF_9
  - LL_GPIO_AF_10
  - LL_GPIO_AF_11
  - LL_GPIO_AF_12
  - LL_GPIO_AF_13
  - LL_GPIO_AF_14
  - LL_GPIO_AF_15

Return values

- **None:**

Notes

- Possible values are from AF0 to AF15 depending on target.
- Warning: only one pin can be passed as parameter.

Reference Manual to LL API cross reference:

- AFRH AFSELy LL_GPIO_SetAFPin_8_15

LL_GPIO_GetAFPin_8_15

Function name

__STATIC_INLINE uint32_t LL_GPIO_GetAFPin_8_15 (GPIO_TypeDef * GPIOx, uint32_t Pin)

Function description

Return gpio alternate function of a dedicated pin from 8 to 15 for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15

Return values

- **Returned:** value can be one of the following values:
  - LL_GPIO_AF_0
  - LL_GPIO_AF_1
  - LL_GPIO_AF_2
  - LL_GPIO_AF_3
  - LL_GPIO_AF_4
  - LL_GPIO_AF_5
  - LL_GPIO_AF_6
  - LL_GPIO_AF_7
  - LL_GPIO_AF_8
  - LL_GPIO_AF_9
  - LL_GPIO_AF_10
  - LL_GPIO_AF_11
  - LL_GPIO_AF_12
  - LL_GPIO_AF_13
  - LL_GPIO_AF_14
  - LL_GPIO_AF_15

Notes

- Possible values are from AF0 to AF15 depending on target.

Reference Manual to LL API cross reference:

- AFRH AFSELy LL_GPIO_GetAFPin_8_15

LL_GPIO_LockPin

Function name

__STATIC_INLINE void LL_GPIO_LockPin (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Lock configuration of several pins for a dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Notes

- When the lock sequence has been applied on a port bit, the value of this port bit can no longer be modified until the next reset.
- Each lock bit freezes a specific configuration register (control and alternate function registers).

Reference Manual to LL API cross reference:

- LCKR LCKK LL_GPIO_LockPin

LL_GPIO_IsPinLocked

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsPinLocked (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Return 1 if all pins passed as parameter, of a dedicated port, are locked.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LCKR LCKy LL_GPIO_IsPinLocked

LL_GPIO_IsAnyPinLocked

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsAnyPinLocked (GPIO_TypeDef * GPIOx)

Function description

Return 1 if one of the pin of a dedicated port is locked.

Parameters

- **GPIOx:** GPIO Port

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- LCKR LCKK LL_GPIO_IsAnyPinLocked

LL_GPIO_ReadInputPort

Function name

__STATIC_INLINE uint32_t LL_GPIO_ReadInputPort (GPIO_TypeDef * GPIOx)

Function description

Return full input data register value for a dedicated port.

Parameters

- **GPIOx:** GPIO Port

Return values

- **Input:** data register value of port

Reference Manual to LL API cross reference:

- IDR IDy LL_GPIO_ReadInputPort

LL_GPIO_IsInputPinSet

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsInputPinSet (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Return if input data level for several pins of dedicated port is high or low.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IDR IDy LL_GPIO_IsInputPinSet

LL_GPIO_WriteOutputPort

Function name

__STATIC_INLINE void LL_GPIO_WriteOutputPort (GPIO_TypeDef * GPIOx, uint32_t PortValue)

Function description

Write output data register for the port.

Parameters

- **GPIOx:** GPIO Port
- **PortValue:** Level value for each pin of the port

Return values

- **None:**

Reference Manual to LL API cross reference:

- ODR ODy LL_GPIO_WriteOutputPort

LL_GPIO_ReadOutputPort

Function name

__STATIC_INLINE uint32_t LL_GPIO_ReadOutputPort (GPIO_TypeDef * GPIOx)

Function description

Return full output data register value for a dedicated port.

Parameters

- **GPIOx:** GPIO Port

Return values

- **Output:** data register value of port

Reference Manual to LL API cross reference:

- ODR ODy LL_GPIO_ReadOutputPort

LL_GPIO_IsOutputPinSet

Function name

__STATIC_INLINE uint32_t LL_GPIO_IsOutputPinSet (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Return if input data level for several pins of dedicated port is high or low.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ODR ODy LL_GPIO_IsOutputPinSet

LL_GPIO_SetOutputPin

Function name

__STATIC_INLINE void LL_GPIO_SetOutputPin (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Set several pins to high level on dedicated gpio port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- BSRR BSy LL_GPIO_SetOutputPin

LL_GPIO_ResetOutputPin

Function name

__STATIC_INLINE void LL_GPIO_ResetOutputPin (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Set several pins to low level on dedicated gpio port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- BSRR BRy LL_GPIO_ResetOutputPin

LL_GPIO_TogglePin

Function name

__STATIC_INLINE void LL_GPIO_TogglePin (GPIO_TypeDef * GPIOx, uint32_t PinMask)

Function description

Toggle data value for several pin of dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL_GPIO_PIN_0
  - LL_GPIO_PIN_1
  - LL_GPIO_PIN_2
  - LL_GPIO_PIN_3
  - LL_GPIO_PIN_4
  - LL_GPIO_PIN_5
  - LL_GPIO_PIN_6
  - LL_GPIO_PIN_7
  - LL_GPIO_PIN_8
  - LL_GPIO_PIN_9
  - LL_GPIO_PIN_10
  - LL_GPIO_PIN_11
  - LL_GPIO_PIN_12
  - LL_GPIO_PIN_13
  - LL_GPIO_PIN_14
  - LL_GPIO_PIN_15
  - LL_GPIO_PIN_ALL

Return values

- **None:**

Reference Manual to LL API cross reference:

- ODR ODy LL_GPIO_TogglePin

LL_GPIO_DeInit

Function name

ErrorStatus LL_GPIO_DeInit (GPIO_TypeDef * GPIOx)

Function description

De-initialize GPIO registers (Registers restored to their default values).

Parameters

- **GPIOx:** GPIO Port

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: GPIO registers are de-initialized
  - ERROR: Wrong GPIO Port

LL_GPIO_Init

Function name

ErrorStatus LL_GPIO_Init (GPIO_TypeDef * GPIOx, LL_GPIO_InitTypeDef * GPIO_InitStruct)

Function description

Initialize GPIO registers according to the specified parameters in GPIO_InitStruct.

Parameters

- **GPIOx:** GPIO Port
- **GPIO_InitStruct:** pointer to a LL_GPIO_InitTypeDef structure that contains the configuration information for the specified GPIO peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: GPIO registers are initialized according to GPIO_InitStruct content
  - ERROR: Not applicable

LL_GPIO_StructInit

Function name

void LL_GPIO_StructInit (LL_GPIO_InitTypeDef * GPIO_InitStruct)

Function description

Set each LL_GPIO_InitTypeDef field to default value.

Parameters

- **GPIO_InitStruct:** pointer to a LL_GPIO_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

Common Write and read registers Macros

LL_GPIO_WriteReg

Description:

- Write a value in GPIO register.

Parameters:

- __INSTANCE__: GPIO Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_GPIO_ReadReg

Description:

- Read a value in GPIO register.

Parameters:

- __INSTANCE__: GPIO Instance
- __REG__: Register to be read

Return value:

- Register: value

111 LL HRTIM Generic Driver

111.1 HRTIM Firmware driver API description

The following section lists the various functions of the HRTIM library.

111.1.1 Detailed description of functions

LL_HRTIM_SetSyncInSrc

Function name

__STATIC_INLINE void LL_HRTIM_SetSyncInSrc (HRTIM_TypeDef * HRTIMx, uint32_t SyncInSrc)

Function description

Select the HRTIM synchronization input source.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **SyncInSrc:** This parameter can be one of the following values:
  - LL_HRTIM_SYNCIN_SRC_NONE
  - LL_HRTIM_SYNCIN_SRC_TIM_EVENT
  - LL_HRTIM_SYNCIN_SRC_EXTERNAL_EVENT

Return values

- **None:**

Notes

- This function must not be called when the concerned timer(s) is (are) enabled .

Reference Manual to LL API cross reference:

- MCR SYNCIN LL_HRTIM_SetSyncInSrc

LL_HRTIM_GetSyncInSrc

Function name

__STATIC_INLINE uint32_t LL_HRTIM_GetSyncInSrc (const HRTIM_TypeDef * HRTIMx)

Function description

Get actual HRTIM synchronization input source.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **SyncInSrc:** Returned value can be one of the following values:
  - LL_HRTIM_SYNCIN_SRC_NONE
  - LL_HRTIM_SYNCIN_SRC_TIM_EVENT
  - LL_HRTIM_SYNCIN_SRC_EXTERNAL_EVENT

Reference Manual to LL API cross reference:

- MCR SYNCIN LL_HRTIM_SetSyncInSrc

LL_HRTIM_ConfigSyncOut

Function name

__STATIC_INLINE void LL_HRTIM_ConfigSyncOut (HRTIM_TypeDef * HRTIMx, uint32_t Config, uint32_t Src)

Function description

Configure the HRTIM synchronization output.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Config:** This parameter can be one of the following values:
  - LL_HRTIM_SYNCOUT_DISABLED
  - LL_HRTIM_SYNCOUT_POSITIVE_PULSE
  - LL_HRTIM_SYNCOUT_NEGATIVE_PULSE
- **Src:** This parameter can be one of the following values:
  - LL_HRTIM_SYNCOUT_SRC_MASTER_START
  - LL_HRTIM_SYNCOUT_SRC_MASTER_CMP1
  - LL_HRTIM_SYNCOUT_SRC_TIMA_START
  - LL_HRTIM_SYNCOUT_SRC_TIMA_CMP1

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR SYNCSRC LL_HRTIM_ConfigSyncOut
- MCR SYNCOUT LL_HRTIM_ConfigSyncOut

LL_HRTIM_SetSyncOutConfig

Function name

__STATIC_INLINE void LL_HRTIM_SetSyncOutConfig (HRTIM_TypeDef * HRTIMx, uint32_t SyncOutConfig)

Function description

Set the routing and conditioning of the synchronization output event.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **SyncOutConfig:** This parameter can be one of the following values:
  - LL_HRTIM_SYNCOUT_DISABLED
  - LL_HRTIM_SYNCOUT_POSITIVE_PULSE
  - LL_HRTIM_SYNCOUT_NEGATIVE_PULSE

Return values

- **None:**

Notes

- This function can be called only when the master timer is enabled.

Reference Manual to LL API cross reference:

- MCR SYNCOUT LL_HRTIM_SetSyncOutConfig

LL_HRTIM_GetSyncOutConfig

Function name

__STATIC_INLINE uint32_t LL_HRTIM_GetSyncOutConfig (const HRTIM_TypeDef * HRTIMx)

Function description

Get actual routing and conditioning of the synchronization output event.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **SyncOutConfig:** Returned value can be one of the following values:
  - LL_HRTIM_SYNCOUT_DISABLED
  - LL_HRTIM_SYNCOUT_POSITIVE_PULSE
  - LL_HRTIM_SYNCOUT_NEGATIVE_PULSE

Reference Manual to LL API cross reference:

- MCR SYNCOUT LL_HRTIM_GetSyncOutConfig

LL_HRTIM_SetSyncOutSrc

Function name

__STATIC_INLINE void LL_HRTIM_SetSyncOutSrc (HRTIM_TypeDef * HRTIMx, uint32_t SyncOutSrc)

Function description

Set the source and event to be sent on the HRTIM synchronization output.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **SyncOutSrc:** This parameter can be one of the following values:
  - LL_HRTIM_SYNCOUT_SRC_MASTER_START
  - LL_HRTIM_SYNCOUT_SRC_MASTER_CMP1
  - LL_HRTIM_SYNCOUT_SRC_TIMA_START
  - LL_HRTIM_SYNCOUT_SRC_TIMA_CMP1

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR SYNCSRC LL_HRTIM_SetSyncOutSrc

LL_HRTIM_GetSyncOutSrc

Function name

__STATIC_INLINE uint32_t LL_HRTIM_GetSyncOutSrc (const HRTIM_TypeDef * HRTIMx)

Function description

Get actual source and event sent on the HRTIM synchronization output.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **SyncOutSrc:** Returned value can be one of the following values:
  - LL_HRTIM_SYNCOUT_SRC_MASTER_START
  - LL_HRTIM_SYNCOUT_SRC_MASTER_CMP1
  - LL_HRTIM_SYNCOUT_SRC_TIMA_START
  - LL_HRTIM_SYNCOUT_SRC_TIMA_CMP1

Reference Manual to LL API cross reference:

- MCR SYNCSRC LL_HRTIM_GetSyncOutSrc

LL_HRTIM_SuspendUpdate

Function name

__STATIC_INLINE void LL_HRTIM_SuspendUpdate (HRTIM_TypeDef * HRTIMx, uint32_t Timers)

Function description

Disable (temporarily) update event generation.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timers:** This parameter can be a combination of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Notes

- Allow to temporarily disable the transfer from preload to active registers, whatever the selected update event. This allows to modify several registers in multiple timers.

Reference Manual to LL API cross reference:

- CR1 MUDIS LL_HRTIM_SuspendUpdate
- CR1 TAUDIS LL_HRTIM_SuspendUpdate
- CR1 TBUDIS LL_HRTIM_SuspendUpdate
- CR1 TCUDIS LL_HRTIM_SuspendUpdate
- CR1 TDUDIS LL_HRTIM_SuspendUpdate
- CR1 TEUDIS LL_HRTIM_SuspendUpdate

LL_HRTIM_ResumeUpdate

Function name

__STATIC_INLINE void LL_HRTIM_ResumeUpdate (HRTIM_TypeDef * HRTIMx, uint32_t Timers)

Function description

Enable update event generation.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timers:** This parameter can be a combination of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Notes

- The regular update event takes place.

Reference Manual to LL API cross reference:

- CR1 MUDIS LL_HRTIM_ResumeUpdate
- CR1 TAUDIS LL_HRTIM_ResumeUpdate
- CR1 TBUDIS LL_HRTIM_ResumeUpdate
- CR1 TCUDIS LL_HRTIM_ResumeUpdate
- CR1 TDUDIS LL_HRTIM_ResumeUpdate
- CR1 TEUDIS LL_HRTIM_ResumeUpdate

LL_HRTIM_ForceUpdate

Function name

__STATIC_INLINE void LL_HRTIM_ForceUpdate (HRTIM_TypeDef * HRTIMx, uint32_t Timers)

Function description

Force an immediate transfer from the preload to the active register .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timers:** This parameter can be a combination of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Notes

- Any pending update request is cancelled.

Reference Manual to LL API cross reference:

- CR2 MSWU LL_HRTIM_ForceUpdate
- CR2 TASWU LL_HRTIM_ForceUpdate
- CR2 TBSWU LL_HRTIM_ForceUpdate
- CR2 TCSWU LL_HRTIM_ForceUpdate
- CR2 TDSWU LL_HRTIM_ForceUpdate
- CR2 TESWU LL_HRTIM_ForceUpdate

LL_HRTIM_CounterReset

Function name

__STATIC_INLINE void LL_HRTIM_CounterReset (HRTIM_TypeDef * HRTIMx, uint32_t Timers)

Function description

Reset the HRTIM timer(s) counter.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timers:** This parameter can be a combination of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 MRST LL_HRTIM_CounterReset
- CR2 TARST LL_HRTIM_CounterReset
- CR2 TBRST LL_HRTIM_CounterReset
- CR2 TCRST LL_HRTIM_CounterReset
- CR2 TDRST LL_HRTIM_CounterReset
- CR2 TERST LL_HRTIM_CounterReset

LL_HRTIM_EnableOutput

Function name

__STATIC_INLINE void LL_HRTIM_EnableOutput (HRTIM_TypeDef * HRTIMx, uint32_t Outputs)

Function description

Enable the HRTIM timer(s) output(s) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Outputs:** This parameter can be a combination of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **None:**

Reference Manual to LL API cross reference:

- OENR TA1OEN LL_HRTIM_EnableOutput
- OENR TA2OEN LL_HRTIM_EnableOutput
- OENR TB1OEN LL_HRTIM_EnableOutput
- OENR TB2OEN LL_HRTIM_EnableOutput

- OENR TD1OEN LL_HRTIM_EnableOutput
- OENR TD2OEN LL_HRTIM_EnableOutput
- OENR TE1OEN LL_HRTIM_EnableOutput
- OENR TE2OEN LL_HRTIM_EnableOutput

LL_HRTIM_DisableOutput

Function name

__STATIC_INLINE void LL_HRTIM_DisableOutput (HRTIM_TypeDef * HRTIMx, uint32_t Outputs)

Function description

Disable the HRTIM timer(s) output(s) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Outputs:** This parameter can be a combination of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **None:**

Reference Manual to LL API cross reference:

- OENR TA1OEN LL_HRTIM_DisableOutput
- OENR TA2OEN LL_HRTIM_DisableOutput
- OENR TB1OEN LL_HRTIM_DisableOutput
- OENR TB2OEN LL_HRTIM_DisableOutput
- OENR TC1OEN LL_HRTIM_DisableOutput
- OENR TC2OEN LL_HRTIM_DisableOutput
- OENR TD1OEN LL_HRTIM_DisableOutput
- OENR TD2OEN LL_HRTIM_DisableOutput
- OENR TE1OEN LL_HRTIM_DisableOutput
- OENR TE2OEN LL_HRTIM_DisableOutput

LL_HRTIM_IsEnabledOutput

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledOutput (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Indicates whether the HRTIM timer output is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **State:** of TxyOEN bit in HRTIM_OENR register (1 or 0).

Reference Manual to LL API cross reference:

- OENR TA1OEN LL_HRTIM_IsEnabledOutput
- OENR TA2OEN LL_HRTIM_IsEnabledOutput
- OENR TB1OEN LL_HRTIM_IsEnabledOutput
- OENR TB2OEN LL_HRTIM_IsEnabledOutput
- OENR TC1OEN LL_HRTIM_IsEnabledOutput
- OENR TC2OEN LL_HRTIM_IsEnabledOutput
- OENR TD1OEN LL_HRTIM_IsEnabledOutput
- OENR TD2OEN LL_HRTIM_IsEnabledOutput
- OENR TE1OEN LL_HRTIM_IsEnabledOutput
- OENR TE2OEN LL_HRTIM_IsEnabledOutput

LL_HRTIM_IsDisabledOutput

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsDisabledOutput (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Indicates whether the HRTIM timer output is disabled.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **State:** of TxyODS bit in HRTIM_OENR register (1 or 0).

Reference Manual to LL API cross reference:

- ODISR TA1ODIS LL_HRTIM_IsDisabledOutput
- ODISR TA2ODIS LL_HRTIM_IsDisabledOutput

LL_HRTIM_ConfigADCTrig

Function name

__STATIC_INLINE void LL_HRTIM_ConfigADCTrig (HRTIM_TypeDef * HRTIMx, uint32_t ADCTrig, uint32_t Update, uint32_t Src)

Function description

Configure an ADC trigger.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **ADCTrig:** This parameter can be one of the following values:
  - LL_HRTIM_ADCTRIG_1
  - LL_HRTIM_ADCTRIG_2
  - LL_HRTIM_ADCTRIG_3
  - LL_HRTIM_ADCTRIG_4
- **Update:** This parameter can be one of the following values:
  - LL_HRTIM_ADCTRIG_UPDATE_MASTER
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_A
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_B
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_C
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_D
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_E
- **Src:** This parameter can be a combination of the following values:

Return values

- **None:**

LL_HRTIM_SetADCTrigUpdate

Function name

__STATIC_INLINE void LL_HRTIM_SetADCTrigUpdate (HRTIM_TypeDef * HRTIMx, uint32_t ADCTrig, uint32_t Update)

Function description

Associate the ADCx trigger to a timer triggering the update of the HRTIM_ADCxR register.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **ADCTrig:** This parameter can be one of the following values:
  - LL_HRTIM_ADCTRIG_1
  - LL_HRTIM_ADCTRIG_2
  - LL_HRTIM_ADCTRIG_3
  - LL_HRTIM_ADCTRIG_4
- **Update:** This parameter can be one of the following values:
  - LL_HRTIM_ADCTRIG_UPDATE_MASTER
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_A
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_B
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_C
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_D
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_E

Return values

- **None:**

Notes

- When the preload is disabled in the source timer, the HRTIM_ADCxR registers are not preloaded either: a write access will result in an immediate update of the trigger source.

LL_HRTIM_GetADCTrigUpdate

Function name

__STATIC_INLINE uint32_t LL_HRTIM_GetADCTrigUpdate (const HRTIM_TypeDef * HRTIMx, uint32_t ADCTrig)

Function description

Get the source timer triggering the update of the HRTIM_ADCxR register.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **ADCTrig:** This parameter can be one of the following values:
  - LL_HRTIM_ADCTRIG_1
  - LL_HRTIM_ADCTRIG_2
  - LL_HRTIM_ADCTRIG_3
  - LL_HRTIM_ADCTRIG_4

Return values

- **Update:** Returned value can be one of the following values:
  - LL_HRTIM_ADCTRIG_UPDATE_MASTER
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_A
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_B
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_C
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_D
  - LL_HRTIM_ADCTRIG_UPDATE_TIMER_E

LL_HRTIM_SetADCTrigSrc

Function name

__STATIC_INLINE void LL_HRTIM_SetADCTrigSrc (HRTIM_TypeDef * HRTIMx, uint32_t ADCTrig, uint32_t Src)

Function description

Specify which events (timer events and/or external events) are used as triggers for ADC conversion.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **ADCTrig:** This parameter can be one of the following values:
  - LL_HRTIM_ADCTRIG_1
  - LL_HRTIM_ADCTRIG_2
  - LL_HRTIM_ADCTRIG_3
  - LL_HRTIM_ADCTRIG_4

- **Src:** For ADC trigger 1 and ADC trigger 3 this parameter can be a combination of the following values:
  - LL_HRTIM_ADCTRIG_SRC13_NONE
  - LL_HRTIM_ADCTRIG_SRC13_MCMP1
  - LL_HRTIM_ADCTRIG_SRC13_MCMP2
  - LL_HRTIM_ADCTRIG_SRC13_MCMP3
  - LL_HRTIM_ADCTRIG_SRC13_MCMP4
  - LL_HRTIM_ADCTRIG_SRC13_MPER
  - LL_HRTIM_ADCTRIG_SRC13_EEV1
  - LL_HRTIM_ADCTRIG_SRC13_EEV2
  - LL_HRTIM_ADCTRIG_SRC13_EEV3
  - LL_HRTIM_ADCTRIG_SRC13_EEV4
  - LL_HRTIM_ADCTRIG_SRC13_EEV5
  - LL_HRTIM_ADCTRIG_SRC13_TIMACMP2
  - LL_HRTIM_ADCTRIG_SRC13_TIMACMP3
  - LL_HRTIM_ADCTRIG_SRC13_TIMACMP4
  - LL_HRTIM_ADCTRIG_SRC13_TIMAPER
  - LL_HRTIM_ADCTRIG_SRC13_TIMARST
  - LL_HRTIM_ADCTRIG_SRC13_TIMBCMP2
  - LL_HRTIM_ADCTRIG_SRC13_TIMBCMP3
  - LL_HRTIM_ADCTRIG_SRC13_TIMBCMP4
  - LL_HRTIM_ADCTRIG_SRC13_TIMBPER
  - LL_HRTIM_ADCTRIG_SRC13_TIMBRST
  - LL_HRTIM_ADCTRIG_SRC13_TIMCCMP2
  - LL_HRTIM_ADCTRIG_SRC13_TIMCCMP3
  - LL_HRTIM_ADCTRIG_SRC13_TIMCCMP4
  - LL_HRTIM_ADCTRIG_SRC13_TIMCPER
  - LL_HRTIM_ADCTRIG_SRC13_TIMDCMP2
  - LL_HRTIM_ADCTRIG_SRC13_TIMDCMP3
  - LL_HRTIM_ADCTRIG_SRC13_TIMDCMP4
  - LL_HRTIM_ADCTRIG_SRC13_TIMDPER
  - LL_HRTIM_ADCTRIG_SRC13_TIMECMP2
  - LL_HRTIM_ADCTRIG_SRC13_TIMECMP3
  - LL_HRTIM_ADCTRIG_SRC13_TIMECMP4
  - LL_HRTIM_ADCTRIG_SRC13_TIMEPER

  For ADC trigger 2 and ADC trigger 4 this parameter can be a combination of the following values:
  - LL_HRTIM_ADCTRIG_SRC24_NONE
  - LL_HRTIM_ADCTRIG_SRC24_MCMP1
  - LL_HRTIM_ADCTRIG_SRC24_MCMP2
  - LL_HRTIM_ADCTRIG_SRC24_MCMP3
  - LL_HRTIM_ADCTRIG_SRC24_MCMP4
  - LL_HRTIM_ADCTRIG_SRC24_MPER
  - LL_HRTIM_ADCTRIG_SRC24_EEV6
  - LL_HRTIM_ADCTRIG_SRC24_EEV7
  - LL_HRTIM_ADCTRIG_SRC24_EEV8
  - LL_HRTIM_ADCTRIG_SRC24_EEV9
  - LL_HRTIM_ADCTRIG_SRC24_EEV10
  - LL_HRTIM_ADCTRIG_SRC24_TIMACMP2
  - LL_HRTIM_ADCTRIG_SRC24_TIMACMP3
  - LL_HRTIM_ADCTRIG_SRC24_TIMACMP4
  - LL_HRTIM_ADCTRIG_SRC24_TIMAPER
  - LL_HRTIM_ADCTRIG_SRC24_TIMBCMP2
  - LL_HRTIM_ADCTRIG_SRC24_TIMBCMP3

Return values

- **None:**

LL_HRTIM_GetADCTrigSrc

Function name

__STATIC_INLINE uint32_t LL_HRTIM_GetADCTrigSrc (const HRTIM_TypeDef * HRTIMx, uint32_t ADCTrig)

Function description

Indicate which events (timer events and/or external events) are currently used as triggers for ADC conversion.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **ADCTrig:** This parameter can be one of the following values:
  - LL_HRTIM_ADCTRIG_1
  - LL_HRTIM_ADCTRIG_2
  - LL_HRTIM_ADCTRIG_3
  - LL_HRTIM_ADCTRIG_4

Return values

- **Src:** This parameter can be a combination of the following values:

LL_HRTIM_TIM_CounterEnable

Function name

__STATIC_INLINE void LL_HRTIM_TIM_CounterEnable (HRTIM_TypeDef * HRTIMx, uint32_t Timers)

Function description

Enable timer(s) counter.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timers:** This parameter can be a combination of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER TECEN LL_HRTIM_TIM_CounterEnable
- MDIER TDCEN LL_HRTIM_TIM_CounterEnable
- MDIER TCCEN LL_HRTIM_TIM_CounterEnable
- MDIER TBCEN LL_HRTIM_TIM_CounterEnable
- MDIER TACEN LL_HRTIM_TIM_CounterEnable
- MDIER MCEN LL_HRTIM_TIM_CounterEnable

LL_HRTIM_TIM_CounterDisable

Function name

__STATIC_INLINE void LL_HRTIM_TIM_CounterDisable (HRTIM_TypeDef * HRTIMx, uint32_t Timers)

Function description

Disable timer(s) counter.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timers:** This parameter can be a combination of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER TECEN LL_HRTIM_TIM_CounterDisable
- MDIER TDCEN LL_HRTIM_TIM_CounterDisable
- MDIER TCCEN LL_HRTIM_TIM_CounterDisable
- MDIER TBCEN LL_HRTIM_TIM_CounterDisable
- MDIER TACEN LL_HRTIM_TIM_CounterDisable
- MDIER MCEN LL_HRTIM_TIM_CounterDisable

LL_HRTIM_TIM_IsCounterEnabled

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_IsCounterEnabled (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the timer counter is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCEN or TxCEN bit HRTIM_MCR register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER TECEN LL_HRTIM_TIM_IsCounterEnabled
- MDIER TDCEN LL_HRTIM_TIM_IsCounterEnabled
- MDIER TCCEN LL_HRTIM_TIM_IsCounterEnabled
- MDIER TBCEN LL_HRTIM_TIM_IsCounterEnabled
- MDIER TACEN LL_HRTIM_TIM_IsCounterEnabled
- MDIER MCEN LL_HRTIM_TIM_IsCounterEnabled

LL_HRTIM_TIM_SetPrescaler

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetPrescaler (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Prescaler)

Function description

Set the timer clock prescaler ratio.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Prescaler:** This parameter can be one of the following values:
  - LL_HRTIM_PRESCALERRATIO_DIV1
  - LL_HRTIM_PRESCALERRATIO_DIV2
  - LL_HRTIM_PRESCALERRATIO_DIV4

Return values

- **None:**

Notes

- The counter clock equivalent frequency (CK_CNT) is equal to fHRCK / 2^CKPSC[2:0].
- The prescaling ratio cannot be modified once the timer counter is enabled.

Reference Manual to LL API cross reference:

- MCR CKPSC LL_HRTIM_TIM_SetPrescaler
- TIMxCR CKPSC LL_HRTIM_TIM_SetPrescaler

LL_HRTIM_TIM_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetPrescaler (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get the timer clock prescaler ratio.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **Prescaler:** Returned value can be one of the following values:
  - LL_HRTIM_PRESCALERRATIO_DIV1
  - LL_HRTIM_PRESCALERRATIO_DIV2
  - LL_HRTIM_PRESCALERRATIO_DIV4

Reference Manual to LL API cross reference:

- MCR CKPSC LL_HRTIM_TIM_GetPrescaler
- TIMxCR CKPSC LL_HRTIM_TIM_GetPrescaler

LL_HRTIM_TIM_SetCounterMode

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetCounterMode (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Mode)

Function description

Set the counter operating mode mode (single-shot, continuous or re-triggerable).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Mode:** This parameter can be one of the following values:
  - LL_HRTIM_MODE_CONTINUOUS
  - LL_HRTIM_MODE_SINGLESHOT
  - LL_HRTIM_MODE_RETRIGGERABLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR CONT LL_HRTIM_TIM_SetCounterMode
- MCR RETRIG LL_HRTIM_TIM_SetCounterMode
- TIMxCR CONT LL_HRTIM_TIM_SetCounterMode
- TIMxCR RETRIG LL_HRTIM_TIM_SetCounterMode

LL_HRTIM_TIM_GetCounterMode

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetCounterMode (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get the counter operating mode mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **Mode:** Returned value can be one of the following values:
  - LL_HRTIM_MODE_CONTINUOUS
  - LL_HRTIM_MODE_SINGLESHOT
  - LL_HRTIM_MODE_RETRIGGERABLE

Reference Manual to LL API cross reference:

- MCR CONT LL_HRTIM_TIM_GetCounterMode
- MCR RETRIG LL_HRTIM_TIM_GetCounterMode
- TIMxCR CONT LL_HRTIM_TIM_GetCounterMode
- TIMxCR RETRIG LL_HRTIM_TIM_GetCounterMode

LL_HRTIM_TIM_EnableHalfMode

Function name

__STATIC_INLINE void LL_HRTIM_TIM_EnableHalfMode (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the half duty-cycle mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Notes

- When the half mode is enabled, HRTIM_MCMP1R (or HRTIM_CMP1xR) active register is automatically updated with HRTIM_MPER/2 (or HRTIM_PERxR/2) value when HRTIM_MPER (or HRTIM_PERxR) register is written.

Reference Manual to LL API cross reference:

- MCR HALF LL_HRTIM_TIM_EnableHalfMode
- TIMxCR HALF LL_HRTIM_TIM_EnableHalfMode

LL_HRTIM_TIM_DisableHalfMode

Function name

__STATIC_INLINE void LL_HRTIM_TIM_DisableHalfMode (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the half duty-cycle mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR HALF LL_HRTIM_TIM_DisableHalfMode
- TIMxCR HALF LL_HRTIM_TIM_DisableHalfMode

LL_HRTIM_TIM_IsEnabledHalfMode

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_IsEnabledHalfMode (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether half duty-cycle mode is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of HALF bit to 1 in HRTIM_MCR or HRTIM_TIMxCR register (1 or 0).

Reference Manual to LL API cross reference:

- MCR HALF LL_HRTIM_TIM_IsEnabledHalfMode
- TIMxCR HALF LL_HRTIM_TIM_IsEnabledHalfMode

LL_HRTIM_TIM_EnableStartOnSync

Function name

__STATIC_INLINE void LL_HRTIM_TIM_EnableStartOnSync (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the timer start when receiving a synchronization input event.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR SYNCSTRTM LL_HRTIM_TIM_EnableStartOnSync
- TIMxCR SYNSTRTA LL_HRTIM_TIM_EnableStartOnSync

LL_HRTIM_TIM_DisableStartOnSync

Function name

__STATIC_INLINE void LL_HRTIM_TIM_DisableStartOnSync (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the timer start when receiving a synchronization input event.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR SYNCSTRTM LL_HRTIM_TIM_DisableStartOnSync
- TIMxCR SYNSTRTA LL_HRTIM_TIM_DisableStartOnSync

LL_HRTIM_TIM_IsEnabledStartOnSync

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_IsEnabledStartOnSync (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the timer start when receiving a synchronization input event.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of SYNCSTRTx bit in HRTIM_MCR or HRTIM_TIMxCR register (1 or 0).

Reference Manual to LL API cross reference:

- MCR SYNCSTRTM LL_HRTIM_TIM_IsEnabledStartOnSync
- TIMxCR SYNSTRTA LL_HRTIM_TIM_IsEnabledStartOnSync

LL_HRTIM_TIM_EnableResetOnSync

Function name

__STATIC_INLINE void LL_HRTIM_TIM_EnableResetOnSync (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the timer reset when receiving a synchronization input event.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR SYNCRSTM LL_HRTIM_TIM_EnableResetOnSync
- TIMxCR SYNCRSTA LL_HRTIM_TIM_EnableResetOnSync

LL_HRTIM_TIM_DisableResetOnSync

Function name

__STATIC_INLINE void LL_HRTIM_TIM_DisableResetOnSync (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the timer reset when receiving a synchronization input event.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR SYNCRSTM LL_HRTIM_TIM_DisableResetOnSync
- TIMxCR SYNCRSTA LL_HRTIM_TIM_DisableResetOnSync

LL_HRTIM_TIM_IsEnabledResetOnSync

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_IsEnabledResetOnSync (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the timer reset when receiving a synchronization input event.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR SYNCRSTM LL_HRTIM_TIM_IsEnabledResetOnSync
- TIMxCR SYNCRSTA LL_HRTIM_TIM_IsEnabledResetOnSync

LL_HRTIM_TIM_SetDACTrig

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetDACTrig (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t DACTrig)

Function description

Set the HRTIM output the DAC synchronization event is generated on (DACtrigOutx).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **DACTrig:** This parameter can be one of the following values:
  - LL_HRTIM_DACTRIG_NONE
  - LL_HRTIM_DACTRIG_DACTRIGOUT_1
  - LL_HRTIM_DACTRIG_DACTRIGOUT_2
  - LL_HRTIM_DACTRIG_DACTRIGOUT_3

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR DACSYNC LL_HRTIM_TIM_SetDACTrig
- TIMxCR DACSYNC LL_HRTIM_TIM_SetDACTrig

LL_HRTIM_TIM_GetDACTrig

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetDACTrig (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get the HRTIM output the DAC synchronization event is generated on (DACtrigOutx).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **DACTrig:** Returned value can be one of the following values:
  - LL_HRTIM_DACTRIG_NONE
  - LL_HRTIM_DACTRIG_DACTRIGOUT_1
  - LL_HRTIM_DACTRIG_DACTRIGOUT_2
  - LL_HRTIM_DACTRIG_DACTRIGOUT_3

Reference Manual to LL API cross reference:

- MCR DACSYNC LL_HRTIM_TIM_GetDACTrig
- TIMxCR DACSYNC LL_HRTIM_TIM_GetDACTrig

LL_HRTIM_TIM_EnablePreload

Function name

__STATIC_INLINE void LL_HRTIM_TIM_EnablePreload (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the timer registers preload mechanism.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Notes

- When the preload mode is enabled, accessed registers are shadow registers. Their content is transferred into the active register after an update request, either software or synchronized with an event.

Reference Manual to LL API cross reference:

- MCR PREEN LL_HRTIM_TIM_EnablePreload
- TIMxCR PREEN LL_HRTIM_TIM_EnablePreload

LL_HRTIM_TIM_DisablePreload

Function name

__STATIC_INLINE void LL_HRTIM_TIM_DisablePreload (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the timer registers preload mechanism.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCR PREEN LL_HRTIM_TIM_DisablePreload
- TIMxCR PREEN LL_HRTIM_TIM_DisablePreload

LL_HRTIM_TIM_IsEnabledPreload

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_IsEnabledPreload (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the timer registers preload mechanism is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of PREEN bit in HRTIM_MCR or HRTIM_TIMxCR register (1 or 0).

Reference Manual to LL API cross reference:

- MCR PREEN LL_HRTIM_TIM_IsEnabledPreload
- TIMxCR PREEN LL_HRTIM_TIM_IsEnabledPreload

LL_HRTIM_TIM_SetUpdateTrig

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetUpdateTrig (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t UpdateTrig)

Function description

Set the timer register update trigger.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **UpdateTrig:** This parameter can be one of the following values:

Reference Manual to LL API cross reference:

- MCR MREPU LL_HRTIM_TIM_SetUpdateTrig
- TIMxCR TAU LL_HRTIM_TIM_SetUpdateTrig
- TIMxCR TBU LL_HRTIM_TIM_SetUpdateTrig

- TIMxCR TDU LL_HRTIM_TIM_SetUpdateTrig
- TIMxCR TEU LL_HRTIM_TIM_SetUpdateTrig
- TIMxCR MSTU LL_HRTIM_TIM_SetUpdateTrig

LL_HRTIM_TIM_GetUpdateTrig

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetUpdateTrig (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get the timer register update trigger.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **UpdateTrig:** Returned value can be one of the following values:

Reference Manual to LL API cross reference:

- MCR MREPU LL_HRTIM_TIM_GetUpdateTrig
- TIMxCR TBU LL_HRTIM_TIM_GetUpdateTrig
- TIMxCR TCU LL_HRTIM_TIM_GetUpdateTrig
- TIMxCR TDU LL_HRTIM_TIM_GetUpdateTrig
- TIMxCR TEU LL_HRTIM_TIM_GetUpdateTrig
- TIMxCR MSTU LL_HRTIM_TIM_GetUpdateTrig

LL_HRTIM_TIM_SetUpdateGating

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetUpdateGating (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t UpdateGating)

Function description

Set the timer registers update condition (how the registers update occurs relatively to the burst DMA transaction or an external update request received on one of the update enable inputs (UPD_EN[3:1])).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **UpdateGating:** This parameter can be one of the following values:

Reference Manual to LL API cross reference:

- MCR BRSTDMA LL_HRTIM_TIM_SetUpdateGating
- TIMxCR UPDGAT LL_HRTIM_TIM_SetUpdateGating

LL_HRTIM_TIM_GetUpdateGating

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetUpdateGating (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get the timer registers update condition.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **UpdateGating:** Returned value can be one of the following values:

Reference Manual to LL API cross reference:

- MCR BRSTDMA LL_HRTIM_TIM_GetUpdateGating
- TIMxCR UPDGAT LL_HRTIM_TIM_GetUpdateGating

LL_HRTIM_TIM_EnablePushPullMode

Function name

__STATIC_INLINE void LL_HRTIM_TIM_EnablePushPullMode (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the push-pull mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxCR PSHPLL LL_HRTIM_TIM_EnablePushPullMode

LL_HRTIM_TIM_DisablePushPullMode

Function name

__STATIC_INLINE void LL_HRTIM_TIM_DisablePushPullMode (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the push-pull mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxCR PSHPLL LL_HRTIM_TIM_DisablePushPullMode

LL_HRTIM_TIM_IsEnabledPushPullMode

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_IsEnabledPushPullMode (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the push-pull mode is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of PSHPLL bit in HRTIM_TIMxCR register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxCR PSHPLL LL_HRTIM_TIM_IsEnabledPushPullMode
-

LL_HRTIM_TIM_SetCompareMode

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetCompareMode (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t CompareUnit, uint32_t Mode)

Function description

Set the functioning mode of the compare unit (CMP2 or CMP4 can operate in standard mode or in auto delayed mode).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **CompareUnit:** This parameter can be one of the following values:
  - LL_HRTIM_COMPAREUNIT_2
  - LL_HRTIM_COMPAREUNIT_4
- **Mode:** This parameter can be one of the following values:
  - LL_HRTIM_COMPAREMODE_REGULAR
  - LL_HRTIM_COMPAREMODE_DELAY_NOTIMEOUT
  - LL_HRTIM_COMPAREMODE_DELAY_CMP1
  - LL_HRTIM_COMPAREMODE_DELAY_CMP3

Return values

- **None:**

Notes

- In auto-delayed mode the compare match occurs independently from the timer counter value.

Reference Manual to LL API cross reference:

- TIMxCR DELCMP2 LL_HRTIM_TIM_SetCompareMode
- TIMxCR DELCMP4 LL_HRTIM_TIM_SetCompareMode

LL_HRTIM_TIM_GetCompareMode

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetCompareMode (const HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t CompareUnit)

Function description

Get the functioning mode of the compare unit.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **CompareUnit:** This parameter can be one of the following values:
  - LL_HRTIM_COMPAREUNIT_2
  - LL_HRTIM_COMPAREUNIT_4

Return values

- **Mode:** Returned value can be one of the following values:
  - LL_HRTIM_COMPAREMODE_REGULAR
  - LL_HRTIM_COMPAREMODE_DELAY_NOTIMEOUT
  - LL_HRTIM_COMPAREMODE_DELAY_CMP1
  - LL_HRTIM_COMPAREMODE_DELAY_CMP3

Reference Manual to LL API cross reference:

- TIMxCR DELCMP2 LL_HRTIM_TIM_GetCompareMode
- TIMxCR DELCMP4 LL_HRTIM_TIM_GetCompareMode

LL_HRTIM_TIM_SetCounter

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetCounter (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Counter)

Function description

Set the timer counter value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Counter:** Value between 0 and 0xFFFF

Return values

- **None:**

Notes

- This function can only be called when the timer is stopped.
- For HR clock prescaling ratio below 32 (CKPSC[2:0] < 5), the least significant bits of the counter are not significant. They cannot be written and return 0 when read.
- The timer behavior is not guaranteed if the counter value is set above the period.

Reference Manual to LL API cross reference:

- MCNTR MCNT LL_HRTIM_TIM_SetCounter
- CNTxR CNTx LL_HRTIM_TIM_SetCounter

LL_HRTIM_TIM_GetCounter

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetCounter (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual timer counter value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **Counter:** Value between 0 and 0xFFFF

Reference Manual to LL API cross reference:

- MCNTR MCNT LL_HRTIM_TIM_GetCounter
- CNTxR CNTx LL_HRTIM_TIM_GetCounter

LL_HRTIM_TIM_SetPeriod

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetPeriod (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Period)

Function description

Set the timer period value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Period:** Value between 0 and 0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- MPER MPER LL_HRTIM_TIM_SetPeriod
- PERxR PERx LL_HRTIM_TIM_SetPeriod

LL_HRTIM_TIM_GetPeriod

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetPeriod (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual timer period value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **Period:** Value between 0 and 0xFFFF

Reference Manual to LL API cross reference:

- MPER MPER LL_HRTIM_TIM_GetPeriod
- PERxR PERx LL_HRTIM_TIM_GetPeriod

LL_HRTIM_TIM_SetRepetition

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetRepetition (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Repetition)

Function description

Set the timer repetition period value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Repetition:** Value between 0 and 0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- MREP MREP LL_HRTIM_TIM_SetRepetition
- REPxR REPx LL_HRTIM_TIM_SetRepetition

LL_HRTIM_TIM_GetRepetition

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetRepetition (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual timer repetition period value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **Repetition:** Value between 0 and 0xFF

Reference Manual to LL API cross reference:

- MREP MREP LL_HRTIM_TIM_GetRepetition
- REPxR REPx LL_HRTIM_TIM_GetRepetition

LL_HRTIM_TIM_SetCompare1

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetCompare1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t CompareValue)

Function description

Set the compare value of the compare unit 1.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **CompareValue:** Compare value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,...

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCMP1R MCMP1 LL_HRTIM_TIM_SetCompare1
- CMP1xR CMP1x LL_HRTIM_TIM_SetCompare1

LL_HRTIM_TIM_GetCompare1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetCompare1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual compare value of the compare unit 1.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **CompareValue:** Compare value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,...

Reference Manual to LL API cross reference:

- MCMP1R MCMP1 LL_HRTIM_TIM_GetCompare1
- CMP1xR CMP1x LL_HRTIM_TIM_GetCompare1

LL_HRTIM_TIM_SetCompare2

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetCompare2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t CompareValue)

Function description

Set the compare value of the compare unit 2.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **CompareValue:** Compare value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,...

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCMP2R MCMP2 LL_HRTIM_TIM_SetCompare2
- CMP2xR CMP2x LL_HRTIM_TIM_SetCompare2

LL_HRTIM_TIM_GetCompare2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetCompare2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual compare value of the compare unit 2.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **CompareValue:** Compare value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,...

-

LL_HRTIM_TIM_SetCompare3

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetCompare3 (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t CompareValue)

Function description

Set the compare value of the compare unit 3.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **CompareValue:** Compare value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,...

Return values

- **None:**

LL_HRTIM_TIM_SetCompare4

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetCompare4 (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t CompareValue)

Function description

Set the compare value of the compare unit 4.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **CompareValue:** Compare value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,...

Return values

- **None:**

Reference Manual to LL API cross reference:

- MCMP4R MCMP4 LL_HRTIM_TIM_SetCompare4
- CMP4xR CMP4x LL_HRTIM_TIM_SetCompare4

LL_HRTIM_TIM_GetCompare4

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetCompare4 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual compare value of the compare unit 4.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **CompareValue:** Compare value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,...

LL_HRTIM_TIM_SetResetTrig

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetResetTrig (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t ResetTrig)

Function description

Set the reset trigger of a timer counter.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **ResetTrig:** This parameter can be a combination of the following values:
  - LL_HRTIM_RESETTRIG_NONE
  - LL_HRTIM_RESETTRIG_UPDATE
  - LL_HRTIM_RESETTRIG_CMP2
  - LL_HRTIM_RESETTRIG_CMP4
  - LL_HRTIM_RESETTRIG_MASTER_PER
  - LL_HRTIM_RESETTRIG_MASTER_CMP1
  - LL_HRTIM_RESETTRIG_MASTER_CMP2
  - LL_HRTIM_RESETTRIG_MASTER_CMP3
  - LL_HRTIM_RESETTRIG_MASTER_CMP4
  - LL_HRTIM_RESETTRIG_EEV_1
  - LL_HRTIM_RESETTRIG_EEV_2
  - LL_HRTIM_RESETTRIG_EEV_3
  - LL_HRTIM_RESETTRIG_EEV_4
  - LL_HRTIM_RESETTRIG_EEV_5
  - LL_HRTIM_RESETTRIG_EEV_6
  - LL_HRTIM_RESETTRIG_EEV_7
  - LL_HRTIM_RESETTRIG_EEV_8
  - LL_HRTIM_RESETTRIG_EEV_9
  - LL_HRTIM_RESETTRIG_EEV_10
  - LL_HRTIM_RESETTRIG_OTHER1_CMP1
  - LL_HRTIM_RESETTRIG_OTHER1_CMP2
  - LL_HRTIM_RESETTRIG_OTHER1_CMP4
  - LL_HRTIM_RESETTRIG_OTHER2_CMP1
  - LL_HRTIM_RESETTRIG_OTHER2_CMP2
  - LL_HRTIM_RESETTRIG_OTHER2_CMP4
  - LL_HRTIM_RESETTRIG_OTHER3_CMP1
  - LL_HRTIM_RESETTRIG_OTHER3_CMP2
  - LL_HRTIM_RESETTRIG_OTHER3_CMP4
  - LL_HRTIM_RESETTRIG_OTHER4_CMP1
  - LL_HRTIM_RESETTRIG_OTHER4_CMP2
  - LL_HRTIM_RESETTRIG_OTHER4_CMP4

Return values

- **None:**

Notes

- The reset of the timer counter can be triggered by up to 30 events that can be selected among the following sources: The timing unit: Compare 2, Compare 4 and Update (3 events). The master timer: Reset and Compare 1..4 (5 events). The external events EXTEVNT1..10 (10 events). All other timing units (e.g. Timer B..E for timer A): Compare 1, 2 and 4 (12 events).

LL_HRTIM_TIM_GetCapture1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetCapture1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get captured value for capture unit 1.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **Captured:** value

Reference Manual to LL API cross reference:

- CPT1xR CPT1x LL_HRTIM_TIM_GetCapture1

LL_HRTIM_TIM_GetCapture2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetCapture2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get captured value for capture unit 2.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **Captured:** value

Reference Manual to LL API cross reference:

- CPT2xR CPT2x LL_HRTIM_TIM_GetCapture2

LL_HRTIM_TIM_SetCaptureTrig

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetCaptureTrig (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t CaptureUnit, uint32_t CaptureTrig)

Function description

Set the trigger of a capture unit for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **CaptureUnit:** This parameter can be one of the following values:
  - LL_HRTIM_CAPTUREUNIT_1
  - LL_HRTIM_CAPTUREUNIT_2
- **CaptureTrig:** This parameter can be a combination of the following values:
  - LL_HRTIM_CAPTURETRIG_NONE
  - LL_HRTIM_CAPTURETRIG_UPDATE
  - LL_HRTIM_CAPTURETRIG_EEV_1
  - LL_HRTIM_CAPTURETRIG_EEV_2
  - LL_HRTIM_CAPTURETRIG_EEV_3

LL_HRTIM_TIM_EnableDeadTime

Function name

__STATIC_INLINE void LL_HRTIM_TIM_EnableDeadTime (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable deadtime insertion for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- OUTxR DTEN LL_HRTIM_TIM_EnableDeadTime

LL_HRTIM_TIM_DisableDeadTime

Function name

__STATIC_INLINE void LL_HRTIM_TIM_DisableDeadTime (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable deadtime insertion for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- OUTxR DTEN LL_HRTIM_TIM_DisableDeadTime

LL_HRTIM_TIM_IsEnabledDeadTime

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_IsEnabledDeadTime (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether deadtime insertion is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of DTEN bit in HRTIM_OUTxR register (1 or 0).

Reference Manual to LL API cross reference:

- OUTxR DTEN LL_HRTIM_TIM_IsEnabledDeadTime

LL_HRTIM_TIM_SetDLYPRTMode

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetDLYPRTMode (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t DLYPRTMode)

Function description

Set the delayed protection (DLYPRT) mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **DLYPRTMode:** Delayed protection (DLYPRT) mode

Notes

- This function must be called prior enabling the delayed protection
- Balanced Idle mode is only available in push-pull mode

Reference Manual to LL API cross reference:

- OUTxR DLYPRTEN LL_HRTIM_TIM_SetDLYPRTMode
- OUTxR DLYPRT LL_HRTIM_TIM_SetDLYPRTMode

LL_HRTIM_TIM_GetDLYPRTMode

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetDLYPRTMode (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get the delayed protection (DLYPRT) mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **DLYPRTMode:** Delayed protection (DLYPRT) mode

Reference Manual to LL API cross reference:

- OUTxR DLYPRTEN LL_HRTIM_TIM_GetDLYPRTMode
- OUTxR DLYPRT LL_HRTIM_TIM_GetDLYPRTMode

LL_HRTIM_TIM_EnableDLYPRT

Function name

__STATIC_INLINE void LL_HRTIM_TIM_EnableDLYPRT (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable delayed protection (DLYPRT) for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Notes

- This function must not be called once the concerned timer is enabled

Reference Manual to LL API cross reference:

- OUTxR DLYPRTEN LL_HRTIM_TIM_EnableDLYPRT

LL_HRTIM_TIM_DisableDLYPRT

Function name

__STATIC_INLINE void LL_HRTIM_TIM_DisableDLYPRT (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable delayed protection (DLYPRT) for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Notes

- This function must not be called once the concerned timer is enabled

Reference Manual to LL API cross reference:

- OUTxR DLYPRTEN LL_HRTIM_TIM_DisableDLYPRT

LL_HRTIM_TIM_IsEnabledDLYPRT

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_IsEnabledDLYPRT (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether delayed protection (DLYPRT) is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of DLYPRTEN bit in HRTIM_OUTxR register (1 or 0).

Reference Manual to LL API cross reference:

- OUTxR DLYPRTEN LL_HRTIM_TIM_IsEnabledDLYPRT

LL_HRTIM_TIM_EnableFault

Function name

__STATIC_INLINE void LL_HRTIM_TIM_EnableFault (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Faults)

Function description

Enable the fault channel(s) for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Faults:** This parameter can be a combination of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLTxR FLT1EN LL_HRTIM_TIM_EnableFault
- FLTxR FLT2EN LL_HRTIM_TIM_EnableFault
- FLTxR FLT3EN LL_HRTIM_TIM_EnableFault
- FLTxR FLT4EN LL_HRTIM_TIM_EnableFault
- FLTxR FLT5EN LL_HRTIM_TIM_EnableFault

LL_HRTIM_TIM_DisableFault

Function name

__STATIC_INLINE void LL_HRTIM_TIM_DisableFault (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Faults)

Function description

Disable the fault channel(s) for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Faults:** This parameter can be a combination of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLTxR FLT1EN LL_HRTIM_TIM_DisableFault
- FLTxR FLT2EN LL_HRTIM_TIM_DisableFault
- FLTxR FLT3EN LL_HRTIM_TIM_DisableFault
- FLTxR FLT4EN LL_HRTIM_TIM_DisableFault
- FLTxR FLT5EN LL_HRTIM_TIM_DisableFault

LL_HRTIM_TIM_IsEnabledFault

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_IsEnabledFault (const HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Fault)

Function description

Indicate whether the fault channel is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5

Return values

- **State:** of FLTxEN bit in HRTIM_FLTxR register (1 or 0).

Reference Manual to LL API cross reference:

- FLTxR FLT1EN LL_HRTIM_TIM_IsEnabledFault
- FLTxR FLT2EN LL_HRTIM_TIM_IsEnabledFault
- FLTxR FLT3EN LL_HRTIM_TIM_IsEnabledFault
- FLTxR FLT4EN LL_HRTIM_TIM_IsEnabledFault
- FLTxR FLT5EN LL_HRTIM_TIM_IsEnabledFault

LL_HRTIM_TIM_LockFault

Function name

__STATIC_INLINE void LL_HRTIM_TIM_LockFault (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Lock the fault conditioning set-up for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Notes

- Timer fault-related set-up is frozen until the next HRTIM or system reset

Reference Manual to LL API cross reference:

- FLTxR FLTLCK LL_HRTIM_TIM_LockFault

LL_HRTIM_TIM_SetBurstModeOption

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetBurstModeOption (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t BurtsModeOption)

Function description

Define how the timer behaves during a burst mode operation.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **BurtsModeOption:** This parameter can be one of the following values:
  - LL_HRTIM_BURSTMODE_MAINTAINCLOCK
  - LL_HRTIM_BURSTMODE_RESETCOUNTER

Return values

- **None:**

Notes

- This function must not be called when the burst mode is enabled

Reference Manual to LL API cross reference:

- BMCR MTBM LL_HRTIM_TIM_SetBurstModeOption
- BMCR TABM LL_HRTIM_TIM_SetBurstModeOption

LL_HRTIM_TIM_GetBurstModeOption

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetBurstModeOption (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Retrieve how the timer behaves during a burst mode operation.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **BurtsMode:** This parameter can be one of the following values:
  - LL_HRTIM_BURSTMODE_MAINTAINCLOCK
  - LL_HRTIM_BURSTMODE_RESETCOUNTER

Reference Manual to LL API cross reference:

- BMCR MCR LL_HRTIM_TIM_GetBurstModeOption

LL_HRTIM_TIM_ConfigBurstDMA

Function name

__STATIC_INLINE void LL_HRTIM_TIM_ConfigBurstDMA (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Registers)

Function description

Program which registers are to be written by Burst DMA transfers.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

LL_HRTIM_TIM_GetCurrentPushPullStatus

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetCurrentPushPullStatus (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate on which output the signal is currently applied.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **CPPSTAT:** This parameter can be one of the following values:
  - LL_HRTIM_CPPSTAT_OUTPUT1
  - LL_HRTIM_CPPSTAT_OUTPUT2

Notes

- Only significant when the timer operates in push-pull mode.

Reference Manual to LL API cross reference:

- TIMxISR CPPSTAT LL_HRTIM_TIM_GetCurrentPushPullStatus

LL_HRTIM_TIM_GetIdlePushPullStatus

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetIdlePushPullStatus (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate on which output the signal was applied, in push-pull mode, balanced fault mode or delayed idle mode, when the protection was triggered.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **IPPSTAT:** This parameter can be one of the following values:
  - LL_HRTIM_IPPSTAT_OUTPUT1
  - LL_HRTIM_IPPSTAT_OUTPUT2

Reference Manual to LL API cross reference:

- TIMxISR IPPSTAT LL_HRTIM_TIM_GetIdlePushPullStatus

LL_HRTIM_TIM_SetEventFilter

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetEventFilter (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Event, uint32_t Filter)

Function description

Set the event filter for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Event:** This parameter can be one of the following values:
  - LL_HRTIM_EVENT_1
  - LL_HRTIM_EVENT_2
  - LL_HRTIM_EVENT_3
  - LL_HRTIM_EVENT_4
  - LL_HRTIM_EVENT_5
  - LL_HRTIM_EVENT_6
  - LL_HRTIM_EVENT_7
  - LL_HRTIM_EVENT_8
  - LL_HRTIM_EVENT_9
  - LL_HRTIM_EVENT_10
- **Filter:** This parameter can be one of the following values:
  - LL_HRTIM_EEFLTR_NONE
  - LL_HRTIM_EEFLTR_BLANKINGCMP1
  - LL_HRTIM_EEFLTR_BLANKINGCMP2
  - LL_HRTIM_EEFLTR_BLANKINGCMP3
  - LL_HRTIM_EEFLTR_BLANKINGCMP4
  - LL_HRTIM_EEFLTR_BLANKINGFLTR1
  - LL_HRTIM_EEFLTR_BLANKINGFLTR2
  - LL_HRTIM_EEFLTR_BLANKINGFLTR3
  - LL_HRTIM_EEFLTR_BLANKINGFLTR4
  - LL_HRTIM_EEFLTR_BLANKINGFLTR5
  - LL_HRTIM_EEFLTR_BLANKINGFLTR6
  - LL_HRTIM_EEFLTR_BLANKINGFLTR7
  - LL_HRTIM_EEFLTR_BLANKINGFLTR8
  - LL_HRTIM_EEFLTR_WINDOWINGCMP2
  - LL_HRTIM_EEFLTR_WINDOWINGCMP3
  - LL_HRTIM_EEFLTR_WINDOWINGTIM

Return values

- **None:**

Notes

- This function must not be called when the timer counter is enabled.

Reference Manual to LL API cross reference:

LL_HRTIM_TIM_GetEventFilter

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetEventFilter (const HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Event)

Function description

Get actual event filter settings for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Event:** This parameter can be one of the following values:
  - LL_HRTIM_EVENT_1
  - LL_HRTIM_EVENT_2
  - LL_HRTIM_EVENT_3
  - LL_HRTIM_EVENT_4
  - LL_HRTIM_EVENT_5
  - LL_HRTIM_EVENT_6
  - LL_HRTIM_EVENT_7
  - LL_HRTIM_EVENT_8
  - LL_HRTIM_EVENT_9
  - LL_HRTIM_EVENT_10

Return values

- **Filter:** This parameter can be one of the following values:
  - LL_HRTIM_EEFLTR_NONE
  - LL_HRTIM_EEFLTR_BLANKINGCMP1
  - LL_HRTIM_EEFLTR_BLANKINGCMP2
  - LL_HRTIM_EEFLTR_BLANKINGCMP3
  - LL_HRTIM_EEFLTR_BLANKINGCMP4

LL_HRTIM_TIM_SetEventLatchStatus

Function name

__STATIC_INLINE void LL_HRTIM_TIM_SetEventLatchStatus (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Event, uint32_t LatchStatus)

Function description

Enable or disable event latch mechanism for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Event:** This parameter can be one of the following values:
  - LL_HRTIM_EVENT_1
  - LL_HRTIM_EVENT_2
  - LL_HRTIM_EVENT_3
  - LL_HRTIM_EVENT_4
  - LL_HRTIM_EVENT_5
  - LL_HRTIM_EVENT_6
  - LL_HRTIM_EVENT_7
  - LL_HRTIM_EVENT_8
  - LL_HRTIM_EVENT_9
  - LL_HRTIM_EVENT_10
- **LatchStatus:** This parameter can be one of the following values:
  - LL_HRTIM_EELATCH_DISABLED
  - LL_HRTIM_EELATCH_ENABLED

Return values

- **None:**

Notes

- This function must not be called when the timer counter is enabled.

LL_HRTIM_TIM_GetEventLatchStatus

Function name

__STATIC_INLINE uint32_t LL_HRTIM_TIM_GetEventLatchStatus (const HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Event)

Function description

Get actual event latch status for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Event:** This parameter can be one of the following values:
  - LL_HRTIM_EVENT_1
  - LL_HRTIM_EVENT_2
  - LL_HRTIM_EVENT_3
  - LL_HRTIM_EVENT_4
  - LL_HRTIM_EVENT_5
  - LL_HRTIM_EVENT_6
  - LL_HRTIM_EVENT_7
  - LL_HRTIM_EVENT_8
  - LL_HRTIM_EVENT_9
  - LL_HRTIM_EVENT_10

Return values

- **LatchStatus:** This parameter can be one of the following values:
  - LL_HRTIM_EELATCH_DISABLED
  - LL_HRTIM_EELATCH_ENABLED

Reference Manual to LL API cross reference:

LL_HRTIM_DT_Config

Function name

__STATIC_INLINE void LL_HRTIM_DT_Config (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Configuration)

Function description

Configure the dead time insertion feature for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_HRTIM_DT_PRESCALER_MUL8 or ... or LL_HRTIM_DT_PRESCALER_DIV16
  - LL_HRTIM_DT_RISING_POSITIVE or LL_HRTIM_DT_RISING_NEGATIVE
  - LL_HRTIM_DT_FALLING_POSITIVE or LL_HRTIM_DT_FALLING_NEGATIVE

Return values

- **None:**

- DTxR SDRT LL_HRTIM_DT_Config

LL_HRTIM_DT_SetPrescaler

Function name

__STATIC_INLINE void LL_HRTIM_DT_SetPrescaler (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Prescaler)

Function description

Set the deadtime prescaler value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Prescaler:** This parameter can be one of the following values:
  - LL_HRTIM_DT_PRESCALER_MUL8
  - LL_HRTIM_DT_PRESCALER_MUL4
  - LL_HRTIM_DT_PRESCALER_MUL2
  - LL_HRTIM_DT_PRESCALER_DIV1
  - LL_HRTIM_DT_PRESCALER_DIV2
  - LL_HRTIM_DT_PRESCALER_DIV4
  - LL_HRTIM_DT_PRESCALER_DIV8
  - LL_HRTIM_DT_PRESCALER_DIV16

Return values

- **None:**

Reference Manual to LL API cross reference:

- DTxR DTPRSC LL_HRTIM_DT_SetPrescaler

LL_HRTIM_DT_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_HRTIM_DT_GetPrescaler (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual deadtime prescaler value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **Prescaler:** This parameter can be one of the following values:
  - LL_HRTIM_DT_PRESCALER_MUL8
  - LL_HRTIM_DT_PRESCALER_MUL4
  - LL_HRTIM_DT_PRESCALER_MUL2
  - LL_HRTIM_DT_PRESCALER_DIV1
  - LL_HRTIM_DT_PRESCALER_DIV2
  - LL_HRTIM_DT_PRESCALER_DIV4

LL_HRTIM_DT_SetRisingValue

Function name

__STATIC_INLINE void LL_HRTIM_DT_SetRisingValue (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t RisingValue)

Function description

Set the deadtime rising value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **RisingValue:** Value between 0 and 0x1FF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DTxR DTR LL_HRTIM_DT_SetRisingValue

LL_HRTIM_DT_GetRisingValue

Function name

__STATIC_INLINE uint32_t LL_HRTIM_DT_GetRisingValue (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual deadtime rising value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **RisingValue:** Value between 0 and 0x1FF

Reference Manual to LL API cross reference:

- DTxR DTR LL_HRTIM_DT_GetRisingValue

LL_HRTIM_DT_SetRisingSign

Function name

__STATIC_INLINE void LL_HRTIM_DT_SetRisingSign (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t RisingSign)

Function description

Set the deadtime sign on rising edge.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **RisingSign:** This parameter can be one of the following values:
  - LL_HRTIM_DT_RISING_POSITIVE
  - LL_HRTIM_DT_RISING_NEGATIVE

Return values

- **None:**

Reference Manual to LL API cross reference:

- DTxR SDTR LL_HRTIM_DT_SetRisingSign

LL_HRTIM_DT_GetRisingSign

Function name

__STATIC_INLINE uint32_t LL_HRTIM_DT_GetRisingSign (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual deadtime sign on rising edge.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **RisingSign:** This parameter can be one of the following values:
  - LL_HRTIM_DT_RISING_POSITIVE
  - LL_HRTIM_DT_RISING_NEGATIVE

Reference Manual to LL API cross reference:

- DTxR SDTR LL_HRTIM_DT_GetRisingSign

LL_HRTIM_DT_SetFallingValue

Function name

__STATIC_INLINE void LL_HRTIM_DT_SetFallingValue (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t FallingValue)

Function description

Set the deadime falling value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **FallingValue:** Value between 0 and 0x1FF

Return values

- **None:**

Reference Manual to LL API cross reference:

- DTxR DTF LL_HRTIM_DT_SetFallingValue

LL_HRTIM_DT_GetFallingValue

Function name

- DTxR DTFSLK LL_HRTIM_DT_LockFallingSign

LL_HRTIM_CHP_Config

Function name

__STATIC_INLINE void LL_HRTIM_CHP_Config (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Configuration)

Function description

Configure the chopper stage for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_HRTIM_CHP_PRESCALER_DIV16 or ... or LL_HRTIM_CHP_PRESCALER_DIV256
  - LL_HRTIM_CHP_DUTYCYCLE_0 or ... or LL_HRTIM_CHP_DUTYCYCLE_875
  - LL_HRTIM_CHP_PULSEWIDTH_16 or ... or LL_HRTIM_CHP_PULSEWIDTH_256

Return values

- **None:**

Notes

- This function must not be called if the chopper mode is already enabled for one of the timer outputs.

LL_HRTIM_CHP_SetPrescaler

Function name

__STATIC_INLINE void LL_HRTIM_CHP_SetPrescaler (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t Prescaler)

Function description

Set prescaler determining the carrier frequency to be added on top of the timer output signals when chopper mode is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **Prescaler:** This parameter can be one of the following values:
  - LL_HRTIM_CHP_PRESCALER_DIV16
  - LL_HRTIM_CHP_PRESCALER_DIV32
  - LL_HRTIM_CHP_PRESCALER_DIV48
  - LL_HRTIM_CHP_PRESCALER_DIV64
  - LL_HRTIM_CHP_PRESCALER_DIV80
  - LL_HRTIM_CHP_PRESCALER_DIV96
  - LL_HRTIM_CHP_PRESCALER_DIV112
  - LL_HRTIM_CHP_PRESCALER_DIV128
  - LL_HRTIM_CHP_PRESCALER_DIV144

  - LL_HRTIM_CHP_PRESCALER_DIV176
  - LL_HRTIM_CHP_PRESCALER_DIV192
  - LL_HRTIM_CHP_PRESCALER_DIV208
  - LL_HRTIM_CHP_PRESCALER_DIV224
  - LL_HRTIM_CHP_PRESCALER_DIV240
  - LL_HRTIM_CHP_PRESCALER_DIV256

Return values

- **None:**

Notes

- This function must not be called if the chopper mode is already enabled for one of the timer outputs.

Reference Manual to LL API cross reference:

- CHPxR CARFRQ LL_HRTIM_CHP_SetPrescaler

LL_HRTIM_CHP_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_HRTIM_CHP_GetPrescaler (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual chopper stage prescaler value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **Prescaler:** This parameter can be one of the following values:
  - LL_HRTIM_CHP_PRESCALER_DIV16
  - LL_HRTIM_CHP_PRESCALER_DIV32
  - LL_HRTIM_CHP_PRESCALER_DIV48

LL_HRTIM_CHP_SetDutyCycle

Function name

__STATIC_INLINE void LL_HRTIM_CHP_SetDutyCycle (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t DutyCycle)

Function description

Set the chopper duty cycle.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **DutyCycle:** This parameter can be one of the following values:
  - LL_HRTIM_CHP_DUTYCYCLE_0
  - LL_HRTIM_CHP_DUTYCYCLE_125
  - LL_HRTIM_CHP_DUTYCYCLE_250
  - LL_HRTIM_CHP_DUTYCYCLE_375
  - LL_HRTIM_CHP_DUTYCYCLE_500
  - LL_HRTIM_CHP_DUTYCYCLE_625
  - LL_HRTIM_CHP_DUTYCYCLE_750
  - LL_HRTIM_CHP_DUTYCYCLE_875

Return values

- **None:**

Notes

- Duty cycle can be adjusted by 1/8 step (from 0/8 up to 7/8)
- This function must not be called if the chopper mode is already enabled for one of the timer outputs.

Reference Manual to LL API cross reference:

- CHPxR CARDTY LL_HRTIM_CHP_SetDutyCycle

LL_HRTIM_CHP_GetDutyCycle

Function name

__STATIC_INLINE uint32_t LL_HRTIM_CHP_GetDutyCycle (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Get actual chopper duty cycle.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **DutyCycle:** This parameter can be one of the following values:
  - LL_HRTIM_CHP_DUTYCYCLE_0
  - LL_HRTIM_CHP_DUTYCYCLE_125
  - LL_HRTIM_CHP_DUTYCYCLE_250
  - LL_HRTIM_CHP_DUTYCYCLE_375

LL_HRTIM_CHP_SetPulseWidth

Function name

__STATIC_INLINE void LL_HRTIM_CHP_SetPulseWidth (HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t PulseWidth)

Function description

Set the start pulse width.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E
- **PulseWidth:** This parameter can be one of the following values:
  - LL_HRTIM_CHP_PULSEWIDTH_16
  - LL_HRTIM_CHP_PULSEWIDTH_32
  - LL_HRTIM_CHP_PULSEWIDTH_48
  - LL_HRTIM_CHP_PULSEWIDTH_64

LL_HRTIM_OUT_GetOutputResetSrc

Function name

__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetOutputResetSrc (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Get the timer output set source.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **ResetSrc:** This parameter can be a combination of the following values:
  - LL_HRTIM_CROSSBAR_NONE
  - LL_HRTIM_CROSSBAR_RESYNC
  - LL_HRTIM_CROSSBAR_TIMPER
  - LL_HRTIM_CROSSBAR_TIMCMP1
  - LL_HRTIM_CROSSBAR_TIMCMP2

LL_HRTIM_OUT_Config

Function name

__STATIC_INLINE void LL_HRTIM_OUT_Config (HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t Configuration)

Function description

Configure a timer output.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_HRTIM_OUT_POSITIVE_POLARITY or LL_HRTIM_OUT_NEGATIVE_POLARITY
  - LL_HRTIM_OUT_NO_IDLE or LL_HRTIM_OUT_IDLE_WHEN_BURST
  - LL_HRTIM_OUT_IDLELEVEL_INACTIVE or LL_HRTIM_OUT_IDLELEVEL_ACTIVE
  - LL_HRTIM_OUT_FAULTSTATE_NO_ACTION or LL_HRTIM_OUT_FAULTSTATE_ACTIVE or LL_HRTIM_OUT_FAULTSTATE_INACTIVE or LL_HRTIM_OUT_FAULTSTATE_HIGHZ
  - LL_HRTIM_OUT_CHOPPERMODE_DISABLED or LL_HRTIM_OUT_CHOPPERMODE_ENABLED
  - LL_HRTIM_OUT_BM_ENTRYMODE_REGULAR or LL_HRTIM_OUT_BM_ENTRYMODE_DELAYED

Return values

- **None:**

LL_HRTIM_OUT_SetPolarity

Function name

__STATIC_INLINE void LL_HRTIM_OUT_SetPolarity (HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t Polarity)

Function description

Set the polarity of a timer output.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2
- **Polarity:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_POSITIVE_POLARITY
  - LL_HRTIM_OUT_NEGATIVE_POLARITY

Return values

- **None:**

Reference Manual to LL API cross reference:

- OUTxR POL1 LL_HRTIM_OUT_SetPolarity
- OUTxR POL2 LL_HRTIM_OUT_SetPolarity

LL_HRTIM_OUT_GetPolarity

Function name

__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetPolarity (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Get actual polarity of the timer output.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **Polarity:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_POSITIVE_POLARITY
  - LL_HRTIM_OUT_NEGATIVE_POLARITY

Reference Manual to LL API cross reference:

- OUTxR POL1 LL_HRTIM_OUT_GetPolarity
- OUTxR POL2 LL_HRTIM_OUT_GetPolarity

LL_HRTIM_OUT_SetIdleMode

Function name

__STATIC_INLINE void LL_HRTIM_OUT_SetIdleMode (HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t IdleMode)

Function description

Set the output IDLE mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2
- **IdleMode:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_NO_IDLE
  - LL_HRTIM_OUT_IDLE_WHEN_BURST

Return values

- **None:**

Notes

- This function must not be called when the burst mode is active

Reference Manual to LL API cross reference:

- OUTxR IDLEM1 LL_HRTIM_OUT_SetIdleMode
- OUTxR IDLEM2 LL_HRTIM_OUT_SetIdleMode

LL_HRTIM_OUT_GetIdleMode

Function name

__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetIdleMode (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Get actual output IDLE mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **IdleMode:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_NO_IDLE
  - LL_HRTIM_OUT_IDLE_WHEN_BURST

Reference Manual to LL API cross reference:

- OUTxR IDLEM1 LL_HRTIM_OUT_GetIdleMode
- OUTxR IDLEM2 LL_HRTIM_OUT_GetIdleMode

LL_HRTIM_OUT_SetIdleLevel

Function name

__STATIC_INLINE void LL_HRTIM_OUT_SetIdleLevel (HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t IdleLevel)

Function description

Set the output IDLE level.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2
- **IdleLevel:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_IDLELEVEL_INACTIVE
  - LL_HRTIM_OUT_IDLELEVEL_ACTIVE

Return values

- **None:**

Notes

- This function must be called prior enabling the timer.
- Idle level isn't relevant when the output idle mode is set to LL_HRTIM_OUT_NO_IDLE.

Reference Manual to LL API cross reference:

- OUTxR IDLES1 LL_HRTIM_OUT_SetIdleLevel
- OUTxR IDLES2 LL_HRTIM_OUT_SetIdleLevel

LL_HRTIM_OUT_GetIdleLevel

Function name

__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetIdleLevel (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Get actual output IDLE level.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **IdleLevel:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_IDLELEVEL_INACTIVE
  - LL_HRTIM_OUT_IDLELEVEL_ACTIVE

Reference Manual to LL API cross reference:

- OUTxR IDLES1 LL_HRTIM_OUT_GetIdleLevel
- OUTxR IDLES2 LL_HRTIM_OUT_GetIdleLevel

LL_HRTIM_OUT_SetFaultState

Function name

__STATIC_INLINE void LL_HRTIM_OUT_SetFaultState (HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t FaultState)

Function description

Set the output FAULT state.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2
- **FaultState:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_FAULTSTATE_NO_ACTION
  - LL_HRTIM_OUT_FAULTSTATE_ACTIVE
  - LL_HRTIM_OUT_FAULTSTATE_INACTIVE
  - LL_HRTIM_OUT_FAULTSTATE_HIGHZ

Return values

- **None:**

Notes

- This function must not called when the timer is enabled and a fault channel is enabled at timer level.

Reference Manual to LL API cross reference:

- OUTxR FAULT1 LL_HRTIM_OUT_SetFaultState
- OUTxR FAULT2 LL_HRTIM_OUT_SetFaultState

LL_HRTIM_OUT_GetFaultState

Function name

__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetFaultState (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Get actual FAULT state.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **FaultState:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_FAULTSTATE_NO_ACTION
  - LL_HRTIM_OUT_FAULTSTATE_ACTIVE
  - LL_HRTIM_OUT_FAULTSTATE_INACTIVE
  - LL_HRTIM_OUT_FAULTSTATE_HIGHZ

Reference Manual to LL API cross reference:

LL_HRTIM_OUT_SetChopperMode

Function name

__STATIC_INLINE void LL_HRTIM_OUT_SetChopperMode (HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t ChopperMode)

Function description

Set the output chopper mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2
- **ChopperMode:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_CHOPPERMODE_DISABLED
  - LL_HRTIM_OUT_CHOPPERMODE_ENABLED

Return values

- **None:**

Notes

- This function must not called when the timer is enabled.

Reference Manual to LL API cross reference:

- OUTxR CHP1 LL_HRTIM_OUT_SetChopperMode
- OUTxR CHP2 LL_HRTIM_OUT_SetChopperMode

LL_HRTIM_OUT_GetChopperMode

Function name

__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetChopperMode (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Get actual output chopper mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **ChopperMode:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_CHOPPERMODE_DISABLED
  - LL_HRTIM_OUT_CHOPPERMODE_ENABLED

Reference Manual to LL API cross reference:

- OUTxR CHP2 LL_HRTIM_OUT_GetChopperMode

LL_HRTIM_OUT_SetBMEntryMode

Function name

__STATIC_INLINE void LL_HRTIM_OUT_SetBMEntryMode (HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t BMEntryMode)

Function description

Set the output burst mode entry mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2
- **BMEntryMode:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_BM_ENTRYMODE_REGULAR
  - LL_HRTIM_OUT_BM_ENTRYMODE_DELAYED

Return values

- **None:**

Notes

- This function must not called when the timer is enabled.

Reference Manual to LL API cross reference:

- OUTxR DIDL1 LL_HRTIM_OUT_SetBMEntryMode
- OUTxR DIDL2 LL_HRTIM_OUT_SetBMEntryMode

LL_HRTIM_OUT_GetBMEntryMode

Function name

__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetBMEntryMode (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Get actual output burst mode entry mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **BMEntryMode:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_BM_ENTRYMODE_REGULAR
  - LL_HRTIM_OUT_BM_ENTRYMODE_DELAYED

Reference Manual to LL API cross reference:

- OUTxR DIDL2 LL_HRTIM_OUT_GetBMEntryMode

LL_HRTIM_OUT_GetDLYPRTOutStatus

Function name

__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetDLYPRTOutStatus (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Get the level (active or inactive) of the designated output when the delayed protection was triggered.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **OutputLevel:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_LEVEL_INACTIVE
  - LL_HRTIM_OUT_LEVEL_ACTIVE

Reference Manual to LL API cross reference:

- TIMxISR O1SRSR LL_HRTIM_OUT_GetDLYPRTOutStatus
- TIMxISR O2SRSR LL_HRTIM_OUT_GetDLYPRTOutStatus

LL_HRTIM_OUT_ForceLevel

Function name

__STATIC_INLINE void LL_HRTIM_OUT_ForceLevel (HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t OutputLevel)

Function description

Force the timer output to its active or inactive level.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2
- **OutputLevel:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_LEVEL_INACTIVE
  - LL_HRTIM_OUT_LEVEL_ACTIVE

Return values

- **None:**

Reference Manual to LL API cross reference:

- SETx1R SST LL_HRTIM_OUT_ForceLevel
- RSTx1R SRT LL_HRTIM_OUT_ForceLevel
- SETx2R SST LL_HRTIM_OUT_ForceLevel
- RSTx2R SRT LL_HRTIM_OUT_ForceLevel

LL_HRTIM_OUT_GetLevel

Function name

__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetLevel (const HRTIM_TypeDef * HRTIMx, uint32_t Output)

Function description

Get actual output level, before the output stage (chopper, polarity).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL_HRTIM_OUTPUT_TA1
  - LL_HRTIM_OUTPUT_TA2
  - LL_HRTIM_OUTPUT_TB1
  - LL_HRTIM_OUTPUT_TB2
  - LL_HRTIM_OUTPUT_TC1
  - LL_HRTIM_OUTPUT_TC2
  - LL_HRTIM_OUTPUT_TD1
  - LL_HRTIM_OUTPUT_TD2
  - LL_HRTIM_OUTPUT_TE1
  - LL_HRTIM_OUTPUT_TE2

Return values

- **OutputLevel:** This parameter can be one of the following values:
  - LL_HRTIM_OUT_LEVEL_INACTIVE
  - LL_HRTIM_OUT_LEVEL_ACTIVE

Reference Manual to LL API cross reference:

LL_HRTIM_EE_Config

Function name

__STATIC_INLINE void LL_HRTIM_EE_Config (HRTIM_TypeDef * HRTIMx, uint32_t Event, uint32_t Configuration)

Function description

Configure external event conditioning.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Event:** This parameter can be one of the following values:
  - LL_HRTIM_EVENT_1
  - LL_HRTIM_EVENT_2
  - LL_HRTIM_EVENT_3
  - LL_HRTIM_EVENT_4
  - LL_HRTIM_EVENT_5
  - LL_HRTIM_EVENT_6
  - LL_HRTIM_EVENT_7
  - LL_HRTIM_EVENT_8
  - LL_HRTIM_EVENT_9
  - LL_HRTIM_EVENT_10
- **Configuration:** This parameter must be a combination of all the following values:
  - External event source 1 or External event source 2 or External event source 3 or External event source 4
  - LL_HRTIM_EE_POLARITY_HIGH or LL_HRTIM_EE_POLARITY_LOW
  - LL_HRTIM_EE_SENSITIVITY_LEVEL or LL_HRTIM_EE_SENSITIVITY_RISINGEDGE or LL_HRTIM_EE_SENSITIVITY_FALLINGEDGE or LL_HRTIM_EE_SENSITIVITY_BOTHEDGES
  - LL_HRTIM_EE_FASTMODE_DISABLE or LL_HRTIM_EE_FASTMODE_ENABLE

Return values

- **None:**

Notes

- This function must not be called when the timer counter is enabled.
- Event source (EExSrc1..EExSRC4) mapping depends on configured event channel.
- Fast mode is available only for LL_HRTIM_EVENT_1..5.

LL_HRTIM_EE_SetPolarity

Function name

__STATIC_INLINE void LL_HRTIM_EE_SetPolarity (HRTIM_TypeDef * HRTIMx, uint32_t Event, uint32_t Polarity)

Function description

Set the polarity of an external event.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Event:** This parameter can be one of the following values:
  - LL_HRTIM_EVENT_1
  - LL_HRTIM_EVENT_2
  - LL_HRTIM_EVENT_3
  - LL_HRTIM_EVENT_4
  - LL_HRTIM_EVENT_5
  - LL_HRTIM_EVENT_6
  - LL_HRTIM_EVENT_7
  - LL_HRTIM_EVENT_8
  - LL_HRTIM_EVENT_9
  - LL_HRTIM_EVENT_10
- **Polarity:** This parameter can be one of the following values:
  - LL_HRTIM_EE_POLARITY_HIGH
  - LL_HRTIM_EE_POLARITY_LOW

Return values

- **None:**

Notes

- This function must not be called when the timer counter is enabled.
- Event polarity is only significant when event detection is level-sensitive.

LL_HRTIM_EE_SetFastMode

Function name

__STATIC_INLINE void LL_HRTIM_EE_SetFastMode (HRTIM_TypeDef * HRTIMx, uint32_t Event, uint32_t FastMode)

Function description

Set the fast mode of an external event.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Event:** This parameter can be one of the following values:
  - LL_HRTIM_EVENT_1
  - LL_HRTIM_EVENT_2
  - LL_HRTIM_EVENT_3
  - LL_HRTIM_EVENT_4
  - LL_HRTIM_EVENT_5
- **FastMode:** This parameter can be one of the following values:
  - LL_HRTIM_EE_FASTMODE_DISABLE
  - LL_HRTIM_EE_FASTMODE_ENABLE

Return values

- **None:**

Notes

- This function must not be called when the timer counter is enabled.

LL_HRTIM_FLT_Config

Function name

__STATIC_INLINE void LL_HRTIM_FLT_Config (HRTIM_TypeDef * HRTIMx, uint32_t Fault, uint32_t Configuration)

Function description

Configure fault signal conditioning Polarity and Source.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_HRTIM_FLT_SRC_DIGITALINPUT..LL_HRTIM_FLT_SRC_INTERNAL
  - LL_HRTIM_FLT_POLARITY_LOW..LL_HRTIM_FLT_POLARITY_HIGH

Return values

- **None:**

Notes

- This function must not be called when the fault channel is enabled.

LL_HRTIM_FLT_SetSrc

Function name

__STATIC_INLINE void LL_HRTIM_FLT_SetSrc (HRTIM_TypeDef * HRTIMx, uint32_t Fault, uint32_t Src)

Function description

Set the source of a fault signal.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5
- **Src:** This parameter can be one of the following values:
  - LL_HRTIM_FLT_SRC_DIGITALINPUT
  - LL_HRTIM_FLT_SRC_INTERNAL

Return values

- **None:**

Notes

- This function must not be called when the fault channel is enabled.

LL_HRTIM_FLT_SetPolarity

Function name

__STATIC_INLINE void LL_HRTIM_FLT_SetPolarity (HRTIM_TypeDef * HRTIMx, uint32_t Fault, uint32_t Polarity)

Function description

Set the polarity of a fault signal.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5
- **Polarity:** This parameter can be one of the following values:
  - LL_HRTIM_FLT_POLARITY_LOW
  - LL_HRTIM_FLT_POLARITY_HIGH

Return values

- **None:**

Notes

- This function must not be called when the fault channel is enabled.

LL_HRTIM_FLT_SetFilter

Function name

__STATIC_INLINE void LL_HRTIM_FLT_SetFilter (HRTIM_TypeDef * HRTIMx, uint32_t Fault, uint32_t Filter)

Function description

Set the digital noise filter of a fault signal.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5
- **Filter:** This parameter can be one of the following values:
  - LL_HRTIM_FLT_FILTER_NONE
  - LL_HRTIM_FLT_FILTER_1
  - LL_HRTIM_FLT_FILTER_2
  - LL_HRTIM_FLT_FILTER_3
  - LL_HRTIM_FLT_FILTER_4
  - LL_HRTIM_FLT_FILTER_5
  - LL_HRTIM_FLT_FILTER_6
  - LL_HRTIM_FLT_FILTER_7
  - LL_HRTIM_FLT_FILTER_8
  - LL_HRTIM_FLT_FILTER_9
  - LL_HRTIM_FLT_FILTER_10
  - LL_HRTIM_FLT_FILTER_11
  - LL_HRTIM_FLT_FILTER_12
  - LL_HRTIM_FLT_FILTER_13
  - LL_HRTIM_FLT_FILTER_14
  - LL_HRTIM_FLT_FILTER_15

Return values

- **None:**

Notes

- This function must not be called when the fault channel is enabled.

Reference Manual to LL API cross reference:

LL_HRTIM_FLT_GetFilter

Function name

__STATIC_INLINE uint32_t LL_HRTIM_FLT_GetFilter (const HRTIM_TypeDef * HRTIMx, uint32_t Fault)

Function description

Get actual digital noise filter setting of a fault signal.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5

Return values

- **Filter:** This parameter can be one of the following values:
  - LL_HRTIM_FLT_FILTER_NONE
  - LL_HRTIM_FLT_FILTER_1
  - LL_HRTIM_FLT_FILTER_2
  - LL_HRTIM_FLT_FILTER_3
  - LL_HRTIM_FLT_FILTER_4
  - LL_HRTIM_FLT_FILTER_5
  - LL_HRTIM_FLT_FILTER_6
  - LL_HRTIM_FLT_FILTER_7
  - LL_HRTIM_FLT_FILTER_8
  - LL_HRTIM_FLT_FILTER_9
  - LL_HRTIM_FLT_FILTER_10
  - LL_HRTIM_FLT_FILTER_11
  - LL_HRTIM_FLT_FILTER_12
  - LL_HRTIM_FLT_FILTER_13
  - LL_HRTIM_FLT_FILTER_14
  - LL_HRTIM_FLT_FILTER_15

LL_HRTIM_FLT_SetPrescaler

Function name

__STATIC_INLINE void LL_HRTIM_FLT_SetPrescaler (HRTIM_TypeDef * HRTIMx, uint32_t Prescaler)

Function description

Set the fault circuitry prescaler.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Prescaler:** This parameter can be one of the following values:
  - LL_HRTIM_FLT_PRESCALER_DIV1
  - LL_HRTIM_FLT_PRESCALER_DIV2
  - LL_HRTIM_FLT_PRESCALER_DIV4
  - LL_HRTIM_FLT_PRESCALER_DIV8

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLTINR2 FLTSD LL_HRTIM_FLT_SetPrescaler

LL_HRTIM_FLT_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_HRTIM_FLT_GetPrescaler (const HRTIM_TypeDef * HRTIMx)

Function description

Get actual fault circuitry prescaler setting.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **Prescaler:** This parameter can be one of the following values:
  - LL_HRTIM_FLT_PRESCALER_DIV1
  - LL_HRTIM_FLT_PRESCALER_DIV2
  - LL_HRTIM_FLT_PRESCALER_DIV4
  - LL_HRTIM_FLT_PRESCALER_DIV8

Reference Manual to LL API cross reference:

- FLTINR2 FLTSD LL_HRTIM_FLT_GetPrescaler

LL_HRTIM_FLT_Lock

Function name

__STATIC_INLINE void LL_HRTIM_FLT_Lock (HRTIM_TypeDef * HRTIMx, uint32_t Fault)

Function description

Lock the fault signal conditioning settings.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLTINR1 FLT1LCK LL_HRTIM_FLT_Lock

LL_HRTIM_FLT_Enable

Function name

__STATIC_INLINE void LL_HRTIM_FLT_Enable (HRTIM_TypeDef * HRTIMx, uint32_t Fault)

Function description

Enable the fault circuitry for the designated fault input.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLTINR1 FLT1E LL_HRTIM_FLT_Enable
- FLTINR1 FLT2E LL_HRTIM_FLT_Enable
- FLTINR1 FLT3E LL_HRTIM_FLT_Enable
- FLTINR1 FLT4E LL_HRTIM_FLT_Enable
- FLTINR2 FLT5E LL_HRTIM_FLT_Enable

LL_HRTIM_FLT_Disable

Function name

__STATIC_INLINE void LL_HRTIM_FLT_Disable (HRTIM_TypeDef * HRTIMx, uint32_t Fault)

Function description

Disable the fault circuitry for for the designated fault input.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLTINR1 FLT1E LL_HRTIM_FLT_Disable
- FLTINR1 FLT2E LL_HRTIM_FLT_Disable
- FLTINR1 FLT3E LL_HRTIM_FLT_Disable
- FLTINR1 FLT4E LL_HRTIM_FLT_Disable
- FLTINR2 FLT5E LL_HRTIM_FLT_Disable

LL_HRTIM_FLT_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_HRTIM_FLT_IsEnabled (const HRTIM_TypeDef * HRTIMx, uint32_t Fault)

Function description

Indicate whether the fault circuitry is enabled for a given fault input.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Fault:** This parameter can be one of the following values:
  - LL_HRTIM_FAULT_1
  - LL_HRTIM_FAULT_2
  - LL_HRTIM_FAULT_3
  - LL_HRTIM_FAULT_4
  - LL_HRTIM_FAULT_5

Return values

- **State:** of FLTxEN bit in HRTIM_FLTINRx register (1 or 0).

Reference Manual to LL API cross reference:

- FLTINR1 FLT1E LL_HRTIM_FLT_IsEnabled
- FLTINR1 FLT2E LL_HRTIM_FLT_IsEnabled
- FLTINR1 FLT3E LL_HRTIM_FLT_IsEnabled
- FLTINR1 FLT4E LL_HRTIM_FLT_IsEnabled
- FLTINR2 FLT5E LL_HRTIM_FLT_IsEnabled

LL_HRTIM_BM_Config

Function name

__STATIC_INLINE void LL_HRTIM_BM_Config (HRTIM_TypeDef * HRTIMx, uint32_t Configuration)

Function description

Configure the burst mode controller.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_HRTIM_BM_MODE_SINGLESHOT or LL_HRTIM_BM_MODE_CONTINOUS
  - LL_HRTIM_BM_CLKSRC_MASTER or ... or LL_HRTIM_BM_CLKSRC_FHRTIM
  - LL_HRTIM_BM_PRESCALER_DIV1 or ... LL_HRTIM_BM_PRESCALER_DIV32768

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMCR BMOM LL_HRTIM_BM_Config
- BMCR BMCLK LL_HRTIM_BM_Config
- BMCR BMPRSC LL_HRTIM_BM_Config

LL_HRTIM_BM_SetMode

Function name

__STATIC_INLINE void LL_HRTIM_BM_SetMode (HRTIM_TypeDef * HRTIMx, uint32_t Mode)

Function description

Set the burst mode controller operating mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Mode:** This parameter can be one of the following values:
  - LL_HRTIM_BM_MODE_SINGLESHOT
  - LL_HRTIM_BM_MODE_CONTINOUS

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMCR BMOM LL_HRTIM_BM_SetMode

LL_HRTIM_BM_GetMode

Function name

__STATIC_INLINE uint32_t LL_HRTIM_BM_GetMode (const HRTIM_TypeDef * HRTIMx)

Function description

Get actual burst mode controller operating mode.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **Mode:** This parameter can be one of the following values:
  - LL_HRTIM_BM_MODE_SINGLESHOT
  - LL_HRTIM_BM_MODE_CONTINOUS

Reference Manual to LL API cross reference:

- BMCR BMOM LL_HRTIM_BM_GetMode

LL_HRTIM_BM_SetClockSrc

Function name

__STATIC_INLINE void LL_HRTIM_BM_SetClockSrc (HRTIM_TypeDef * HRTIMx, uint32_t ClockSrc)

Function description

Set the burst mode controller clock source.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **ClockSrc:** This parameter can be one of the following values:
  - LL_HRTIM_BM_CLKSRC_MASTER
  - LL_HRTIM_BM_CLKSRC_TIMER_A
  - LL_HRTIM_BM_CLKSRC_TIMER_B
  - LL_HRTIM_BM_CLKSRC_TIMER_C
  - LL_HRTIM_BM_CLKSRC_TIMER_D
  - LL_HRTIM_BM_CLKSRC_TIMER_E
  - LL_HRTIM_BM_CLKSRC_TIM16_OC
  - LL_HRTIM_BM_CLKSRC_TIM17_OC
  - LL_HRTIM_BM_CLKSRC_TIM7_TRGO
  - LL_HRTIM_BM_CLKSRC_FHRTIM

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMCR BMCLK LL_HRTIM_BM_SetClockSrc

LL_HRTIM_BM_GetClockSrc

Function name

__STATIC_INLINE uint32_t LL_HRTIM_BM_GetClockSrc (const HRTIM_TypeDef * HRTIMx)

Function description

Get actual burst mode controller clock source.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **ClockSrc:** This parameter can be one of the following values:
  - LL_HRTIM_BM_CLKSRC_MASTER
  - LL_HRTIM_BM_CLKSRC_TIMER_A
  - LL_HRTIM_BM_CLKSRC_TIMER_B
  - LL_HRTIM_BM_CLKSRC_TIMER_C
  - LL_HRTIM_BM_CLKSRC_TIMER_D
  - LL_HRTIM_BM_CLKSRC_TIMER_E
  - LL_HRTIM_BM_CLKSRC_TIM16_OC
  - LL_HRTIM_BM_CLKSRC_TIM17_OC
  - LL_HRTIM_BM_CLKSRC_TIM7_TRGO
  - LL_HRTIM_BM_CLKSRC_FHRTIM
- **ClockSrc:** This parameter can be one of the following values:
  - LL_HRTIM_BM_CLKSRC_MASTER
  - LL_HRTIM_BM_CLKSRC_TIMER_A
  - LL_HRTIM_BM_CLKSRC_TIMER_B
  - LL_HRTIM_BM_CLKSRC_TIMER_C
  - LL_HRTIM_BM_CLKSRC_TIMER_D
  - LL_HRTIM_BM_CLKSRC_TIMER_E
  - LL_HRTIM_BM_CLKSRC_TIM16_OC
  - LL_HRTIM_BM_CLKSRC_TIM17_OC
  - LL_HRTIM_BM_CLKSRC_TIM7_TRGO
  - LL_HRTIM_BM_CLKSRC_FHRTIM

Reference Manual to LL API cross reference:

LL_HRTIM_BM_SetPrescaler

Function name

__STATIC_INLINE void LL_HRTIM_BM_SetPrescaler (HRTIM_TypeDef * HRTIMx, uint32_t Prescaler)

Function description

Set the burst mode controller prescaler.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Prescaler:** This parameter can be one of the following values:
  - LL_HRTIM_BM_PRESCALER_DIV1
  - LL_HRTIM_BM_PRESCALER_DIV2
  - LL_HRTIM_BM_PRESCALER_DIV4
  - LL_HRTIM_BM_PRESCALER_DIV8
  - LL_HRTIM_BM_PRESCALER_DIV16
  - LL_HRTIM_BM_PRESCALER_DIV32
  - LL_HRTIM_BM_PRESCALER_DIV64
  - LL_HRTIM_BM_PRESCALER_DIV128
  - LL_HRTIM_BM_PRESCALER_DIV256
  - LL_HRTIM_BM_PRESCALER_DIV512
  - LL_HRTIM_BM_PRESCALER_DIV1024
  - LL_HRTIM_BM_PRESCALER_DIV2048
  - LL_HRTIM_BM_PRESCALER_DIV4096
  - LL_HRTIM_BM_PRESCALER_DIV8192
  - LL_HRTIM_BM_PRESCALER_DIV16384
  - LL_HRTIM_BM_PRESCALER_DIV32768

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMCR BMPRSC LL_HRTIM_BM_SetPrescaler

LL_HRTIM_BM_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_HRTIM_BM_GetPrescaler (const HRTIM_TypeDef * HRTIMx)

Function description

Get actual burst mode controller prescaler setting.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **Prescaler:** This parameter can be one of the following values:
  - LL_HRTIM_BM_PRESCALER_DIV1
  - LL_HRTIM_BM_PRESCALER_DIV2
  - LL_HRTIM_BM_PRESCALER_DIV4
  - LL_HRTIM_BM_PRESCALER_DIV8
  - LL_HRTIM_BM_PRESCALER_DIV16
  - LL_HRTIM_BM_PRESCALER_DIV32
  - LL_HRTIM_BM_PRESCALER_DIV64
  - LL_HRTIM_BM_PRESCALER_DIV128
  - LL_HRTIM_BM_PRESCALER_DIV256
  - LL_HRTIM_BM_PRESCALER_DIV512
  - LL_HRTIM_BM_PRESCALER_DIV1024
  - LL_HRTIM_BM_PRESCALER_DIV2048
  - LL_HRTIM_BM_PRESCALER_DIV4096

LL_HRTIM_BM_EnablePreload

Function name

__STATIC_INLINE void LL_HRTIM_BM_EnablePreload (HRTIM_TypeDef * HRTIMx)

Function description

Enable burst mode compare and period registers preload.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMCR BMPREN LL_HRTIM_BM_EnablePreload

LL_HRTIM_BM_DisablePreload

Function name

__STATIC_INLINE void LL_HRTIM_BM_DisablePreload (HRTIM_TypeDef * HRTIMx)

Function description

Disable burst mode compare and period registers preload.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMCR BMPREN LL_HRTIM_BM_DisablePreload

LL_HRTIM_BM_IsEnabledPreload

Function name

__STATIC_INLINE uint32_t LL_HRTIM_BM_IsEnabledPreload (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether burst mode compare and period registers are preloaded.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of BMPREN bit in HRTIM_BMCR register (1 or 0).

Reference Manual to LL API cross reference:

- BMCR BMPREN LL_HRTIM_BM_IsEnabledPreload

LL_HRTIM_BM_SetTrig

Function name

__STATIC_INLINE void LL_HRTIM_BM_SetTrig (HRTIM_TypeDef * HRTIMx, uint32_t Trig)

Function description

Set the burst mode controller trigger.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Trig:** This parameter can be a combination of the following values:
  - LL_HRTIM_BM_TRIG_NONE
  - LL_HRTIM_BM_TRIG_MASTER_RESET
  - LL_HRTIM_BM_TRIG_MASTER_REPETITION
  - LL_HRTIM_BM_TRIG_MASTER_CMP1
  - LL_HRTIM_BM_TRIG_MASTER_CMP2

LL_HRTIM_BM_SetCompare

Function name

__STATIC_INLINE void LL_HRTIM_BM_SetCompare (HRTIM_TypeDef * HRTIMx, uint32_t CompareValue)

Function description

Set the burst mode controller compare value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **CompareValue:** Compare value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,...

Return values

- **None:**

Reference Manual to LL API cross reference:

LL_HRTIM_BM_SetPeriod

Function name

__STATIC_INLINE void LL_HRTIM_BM_SetPeriod (HRTIM_TypeDef * HRTIMx, uint32_t Period)

Function description

Set the burst mode controller period.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Period:** The period value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,... The maximum value is 0x0000 FFDF.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMPER BMPER LL_HRTIM_BM_SetPeriod

LL_HRTIM_BM_GetPeriod

Function name

__STATIC_INLINE uint32_t LL_HRTIM_BM_GetPeriod (const HRTIM_TypeDef * HRTIMx)

Function description

Get actual burst mode controller period.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **The:** period value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,... The maximum value is 0x0000 FFDF.

Reference Manual to LL API cross reference:

- BMPER BMPER LL_HRTIM_BM_GetPeriod

LL_HRTIM_BM_Enable

Function name

__STATIC_INLINE void LL_HRTIM_BM_Enable (HRTIM_TypeDef * HRTIMx)

Function description

Enable the burst mode controller.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMCR BME LL_HRTIM_BM_Enable

LL_HRTIM_BM_Disable

Function name

__STATIC_INLINE void LL_HRTIM_BM_Disable (HRTIM_TypeDef * HRTIMx)

Function description

Disable the burst mode controller.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMCR BME LL_HRTIM_BM_Disable

LL_HRTIM_BM_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_HRTIM_BM_IsEnabled (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the burst mode controller is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of BME bit in HRTIM_BMCR register (1 or 0).

Reference Manual to LL API cross reference:

- BMCR BME LL_HRTIM_BM_IsEnabled

LL_HRTIM_BM_Start

Function name

__STATIC_INLINE void LL_HRTIM_BM_Start (HRTIM_TypeDef * HRTIMx)

Function description

Trigger the burst operation (software trigger)

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- BMTRGR SW LL_HRTIM_BM_Start

LL_HRTIM_BM_Stop

Function name

__STATIC_INLINE void LL_HRTIM_BM_Stop (HRTIM_TypeDef * HRTIMx)

Function description

Stop the burst mode operation.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Notes

- Causes a burst mode early termination.

Reference Manual to LL API cross reference:

- BMCR BMSTAT LL_HRTIM_BM_Stop

LL_HRTIM_BM_GetStatus

Function name

__STATIC_INLINE uint32_t LL_HRTIM_BM_GetStatus (const HRTIM_TypeDef * HRTIMx)

Function description

Get actual burst mode status.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **Status:** This parameter can be one of the following values:
  - LL_HRTIM_BM_STATUS_NORMAL
  - LL_HRTIM_BM_STATUS_BURST_ONGOING

Reference Manual to LL API cross reference:

- BMCR BMSTAT LL_HRTIM_BM_GetStatus

LL_HRTIM_ClearFlag_FLT1

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_FLT1 (HRTIM_TypeDef * HRTIMx)

Function description

Clear the Fault 1 interrupt flag.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FLT1C LL_HRTIM_ClearFlag_FLT1

LL_HRTIM_IsActiveFlag_FLT1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_FLT1 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether Fault 1 interrupt occurred.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT1 bit in HRTIM_ISR register (1 or 0).

Reference Manual to LL API cross reference:

- ICR FLT1 LL_HRTIM_IsActiveFlag_FLT1

LL_HRTIM_ClearFlag_FLT2

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_FLT2 (HRTIM_TypeDef * HRTIMx)

Function description

Clear the Fault 2 interrupt flag.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FLT2C LL_HRTIM_ClearFlag_FLT2

LL_HRTIM_IsActiveFlag_FLT2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_FLT2 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether Fault 2 interrupt occurred.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT2 bit in HRTIM_ISR register (1 or 0).

Reference Manual to LL API cross reference:

- ICR FLT2 LL_HRTIM_IsActiveFlag_FLT2

LL_HRTIM_ClearFlag_FLT3

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_FLT3 (HRTIM_TypeDef * HRTIMx)

Function description

Clear the Fault 3 interrupt flag.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FLT3C LL_HRTIM_ClearFlag_FLT3

LL_HRTIM_IsActiveFlag_FLT3

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_FLT3 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether Fault 3 interrupt occurred.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT3 bit in HRTIM_ISR register (1 or 0).

Reference Manual to LL API cross reference:

- ICR FLT3 LL_HRTIM_IsActiveFlag_FLT3

LL_HRTIM_ClearFlag_FLT4

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_FLT4 (HRTIM_TypeDef * HRTIMx)

Function description

Clear the Fault 4 interrupt flag.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FLT4C LL_HRTIM_ClearFlag_FLT4

LL_HRTIM_IsActiveFlag_FLT4

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_FLT4 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether Fault 4 interrupt occurred.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT4 bit in HRTIM_ISR register (1 or 0).

Reference Manual to LL API cross reference:

- ICR FLT4 LL_HRTIM_IsActiveFlag_FLT4

LL_HRTIM_ClearFlag_FLT5

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_FLT5 (HRTIM_TypeDef * HRTIMx)

Function description

Clear the Fault 5 interrupt flag.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FLT5C LL_HRTIM_ClearFlag_FLT5

LL_HRTIM_IsActiveFlag_FLT5

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_FLT5 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether Fault 5 interrupt occurred.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT5 bit in HRTIM_ISR register (1 or 0).

Reference Manual to LL API cross reference:

- ICR FLT5 LL_HRTIM_IsActiveFlag_FLT5

LL_HRTIM_ClearFlag_SYSFLT

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_SYSFLT (HRTIM_TypeDef * HRTIMx)

Function description

Clear the System Fault interrupt flag.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR SYSFLTC LL_HRTIM_ClearFlag_SYSFLT

LL_HRTIM_IsActiveFlag_SYSFLT

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_SYSFLT (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether System Fault interrupt occurred.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of SYSFLT bit in HRTIM_ISR register (1 or 0).

Reference Manual to LL API cross reference:

- ISR SYSFLT LL_HRTIM_IsActiveFlag_SYSFLT

LL_HRTIM_ClearFlag_BMPER

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_BMPER (HRTIM_TypeDef * HRTIMx)

Function description

Clear the Burst Mode period interrupt flag.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR BMPERC LL_HRTIM_ClearFlag_BMPER

LL_HRTIM_IsActiveFlag_BMPER

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_BMPER (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether Burst Mode period interrupt occurred.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of BMPER bit in HRTIM_ISR register (1 or 0).

Reference Manual to LL API cross reference:

- ISR BMPER LL_HRTIM_IsActiveFlag_BMPER

LL_HRTIM_ClearFlag_SYNC

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_SYNC (HRTIM_TypeDef * HRTIMx)

Function description

Clear the Synchronization Input interrupt flag.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- MICR SYNCC LL_HRTIM_ClearFlag_SYNC

LL_HRTIM_IsActiveFlag_SYNC

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_SYNC (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the Synchronization Input interrupt occurred.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of SYNC bit in HRTIM_MISR register (1 or 0).

Reference Manual to LL API cross reference:

- MISR SYNC LL_HRTIM_IsActiveFlag_SYNC

LL_HRTIM_ClearFlag_UPDATE

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_UPDATE (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the update interrupt flag for a given timer (including the master timer) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MICR MUPDC LL_HRTIM_ClearFlag_UPDATE
- TIMxICR UPDC LL_HRTIM_ClearFlag_UPDATE

LL_HRTIM_IsActiveFlag_UPDATE

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_UPDATE (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the update interrupt has occurred for a given timer (including the master timer) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MUPD/UPD bit in HRTIM_MISR/HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- MISR MUPD LL_HRTIM_IsActiveFlag_UPDATE
- TIMxISR UPD LL_HRTIM_IsActiveFlag_UPDATE

LL_HRTIM_ClearFlag_REP

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_REP (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the repetition interrupt flag for a given timer (including the master timer) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MICR MREPC LL_HRTIM_ClearFlag_REP
- TIMxICR REPC LL_HRTIM_ClearFlag_REP

LL_HRTIM_IsActiveFlag_REP

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_REP (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the repetition interrupt has occurred for a given timer (including the master timer) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MREP/REP bit in HRTIM_MISR/HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- MISR MREP LL_HRTIM_IsActiveFlag_REP
- TIMxISR REP LL_HRTIM_IsActiveFlag_REP

LL_HRTIM_ClearFlag_CMP1

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_CMP1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the compare 1 match interrupt for a given timer (including the master timer).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MICR MCMP1C LL_HRTIM_ClearFlag_CMP1
- TIMxICR CMP1C LL_HRTIM_ClearFlag_CMP1

LL_HRTIM_IsActiveFlag_CMP1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_CMP1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare match 1 interrupt has occurred for a given timer (including the master timer) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP1/CMP1 bit in HRTIM_MISR/HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- MISR MCMP1 LL_HRTIM_IsActiveFlag_CMP1
- TIMxISR CMP1 LL_HRTIM_IsActiveFlag_CMP1

LL_HRTIM_ClearFlag_CMP2

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_CMP2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the compare 2 match interrupt for a given timer (including the master timer).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MICR MCMP2C LL_HRTIM_ClearFlag_CMP2
- TIMxICR CMP2C LL_HRTIM_ClearFlag_CMP2

LL_HRTIM_IsActiveFlag_CMP2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_CMP2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare match 2 interrupt has occurred for a given timer (including the master timer) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP2/CMP2 bit in HRTIM_MISR/HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- MISR MCMP2 LL_HRTIM_IsActiveFlag_CMP2
- TIMxISR CMP2 LL_HRTIM_IsActiveFlag_CMP2

LL_HRTIM_ClearFlag_CMP3

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_CMP3 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the compare 3 match interrupt for a given timer (including the master timer).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MICR MCMP3C LL_HRTIM_ClearFlag_CMP3
- TIMxICR CMP3C LL_HRTIM_ClearFlag_CMP3

LL_HRTIM_IsActiveFlag_CMP3

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_CMP3 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare match 3 interrupt has occurred for a given timer (including the master timer) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP3/CMP3 bit in HRTIM_MISR/HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- MISR MCMP3 LL_HRTIM_IsActiveFlag_CMP3
- TIMxISR CMP3 LL_HRTIM_IsActiveFlag_CMP3

LL_HRTIM_ClearFlag_CMP4

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_CMP4 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the compare 4 match interrupt for a given timer (including the master timer).

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MICR MCMP4C LL_HRTIM_ClearFlag_CMP4
- TIMxICR CMP4C LL_HRTIM_ClearFlag_CMP4

LL_HRTIM_IsActiveFlag_CMP4

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_CMP4 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare match 4 interrupt has occurred for a given timer (including the master timer) .

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP4/CMP4 bit in HRTIM_MISR/HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- MISR MCMP4 LL_HRTIM_IsActiveFlag_CMP4
- TIMxISR CMP4 LL_HRTIM_IsActiveFlag_CMP4

LL_HRTIM_ClearFlag_CPT1

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_CPT1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the capture 1 interrupt flag for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxICR CPT1C LL_HRTIM_ClearFlag_CPT1

LL_HRTIM_IsActiveFlag_CPT1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_CPT1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the capture 1 interrupt occurred for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of CPT1 bit in HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxISR CPT1 LL_HRTIM_IsActiveFlag_CPT1

LL_HRTIM_ClearFlag_CPT2

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_CPT2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the capture 2 interrupt flag for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxICR CPT2C LL_HRTIM_ClearFlag_CPT2

LL_HRTIM_IsActiveFlag_CPT2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_CPT2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the capture 2 interrupt occurred for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of CPT2 bit in HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxISR CPT2 LL_HRTIM_IsActiveFlag_CPT2

LL_HRTIM_ClearFlag_SET1

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_SET1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the output 1 set interrupt flag for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxICR SET1C LL_HRTIM_ClearFlag_SET1

LL_HRTIM_IsActiveFlag_SET1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_SET1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 1 set interrupt occurred for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of SETx1 bit in HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxISR SET1 LL_HRTIM_IsActiveFlag_SET1

LL_HRTIM_ClearFlag_RST1

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_RST1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the output 1 reset interrupt flag for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxICR RST1C LL_HRTIM_ClearFlag_RST1

LL_HRTIM_IsActiveFlag_RST1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_RST1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 1 reset interrupt occurred for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of RSTx1 bit in HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxISR RST1 LL_HRTIM_IsActiveFlag_RST1

LL_HRTIM_ClearFlag_SET2

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_SET2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the output 2 set interrupt flag for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxICR SET2C LL_HRTIM_ClearFlag_SET2

LL_HRTIM_IsActiveFlag_SET2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_SET2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 2 set interrupt occurred for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of SETx2 bit in HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxISR SET2 LL_HRTIM_IsActiveFlag_SET2

LL_HRTIM_ClearFlag_RST2

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_RST2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the output 2reset interrupt flag for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxICR RST2C LL_HRTIM_ClearFlag_RST2

LL_HRTIM_IsActiveFlag_RST2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_RST2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 2 reset interrupt occurred for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of RSTx2 bit in HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxISR RST2 LL_HRTIM_IsActiveFlag_RST2

LL_HRTIM_ClearFlag_RST

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_RST (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the reset and/or roll-over interrupt flag for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxICR RSTC LL_HRTIM_ClearFlag_RST

LL_HRTIM_IsActiveFlag_RST

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_RST (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the reset and/or roll-over interrupt occurred for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of RST bit in HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxISR RST LL_HRTIM_IsActiveFlag_RST

LL_HRTIM_ClearFlag_DLYPRT

Function name

__STATIC_INLINE void LL_HRTIM_ClearFlag_DLYPRT (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Clear the delayed protection interrupt flag for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxICR DLYPRTC LL_HRTIM_ClearFlag_DLYPRT

LL_HRTIM_IsActiveFlag_DLYPRT

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_DLYPRT (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the delayed protection interrupt occurred for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of DLYPRT bit in HRTIM_TIMxISR register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxISR DLYPRT LL_HRTIM_IsActiveFlag_DLYPRT

LL_HRTIM_EnableIT_FLT1

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_FLT1 (HRTIM_TypeDef * HRTIMx)

Function description

Enable the fault 1 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT1IE LL_HRTIM_EnableIT_FLT1

LL_HRTIM_DisableIT_FLT1

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_FLT1 (HRTIM_TypeDef * HRTIMx)

Function description

Disable the fault 1 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT1IE LL_HRTIM_DisableIT_FLT1

LL_HRTIM_IsEnabledIT_FLT1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_FLT1 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the fault 1 interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT1IE bit in HRTIM_IER register (1 or 0).

Reference Manual to LL API cross reference:

- IER FLT1IE LL_HRTIM_IsEnabledIT_FLT1

LL_HRTIM_EnableIT_FLT2

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_FLT2 (HRTIM_TypeDef * HRTIMx)

Function description

Enable the fault 2 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT2IE LL_HRTIM_EnableIT_FLT2

LL_HRTIM_DisableIT_FLT2

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_FLT2 (HRTIM_TypeDef * HRTIMx)

Function description

Disable the fault 2 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT2IE LL_HRTIM_DisableIT_FLT2

LL_HRTIM_IsEnabledIT_FLT2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_FLT2 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the fault 2 interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT2IE bit in HRTIM_IER register (1 or 0).

Reference Manual to LL API cross reference:

- IER FLT2IE LL_HRTIM_IsEnabledIT_FLT2

LL_HRTIM_EnableIT_FLT3

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_FLT3 (HRTIM_TypeDef * HRTIMx)

Function description

Enable the fault 3 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT3IE LL_HRTIM_EnableIT_FLT3

LL_HRTIM_DisableIT_FLT3

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_FLT3 (HRTIM_TypeDef * HRTIMx)

Function description

Disable the fault 3 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT3IE LL_HRTIM_DisableIT_FLT3

LL_HRTIM_IsEnabledIT_FLT3

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_FLT3 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the fault 3 interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT3IE bit in HRTIM_IER register (1 or 0).

Reference Manual to LL API cross reference:

- IER FLT3IE LL_HRTIM_IsEnabledIT_FLT3

LL_HRTIM_EnableIT_FLT4

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_FLT4 (HRTIM_TypeDef * HRTIMx)

Function description

Enable the fault 4 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT4IE LL_HRTIM_EnableIT_FLT4

LL_HRTIM_DisableIT_FLT4

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_FLT4 (HRTIM_TypeDef * HRTIMx)

Function description

Disable the fault 4 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT4IE LL_HRTIM_DisableIT_FLT4

LL_HRTIM_IsEnabledIT_FLT4

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_FLT4 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the fault 4 interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT4IE bit in HRTIM_IER register (1 or 0).

Reference Manual to LL API cross reference:

- IER FLT4IE LL_HRTIM_IsEnabledIT_FLT4

LL_HRTIM_EnableIT_FLT5

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_FLT5 (HRTIM_TypeDef * HRTIMx)

Function description

Enable the fault 5 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT5IE LL_HRTIM_EnableIT_FLT5

LL_HRTIM_DisableIT_FLT5

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_FLT5 (HRTIM_TypeDef * HRTIMx)

Function description

Disable the fault 5 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER FLT5IE LL_HRTIM_DisableIT_FLT5

LL_HRTIM_IsEnabledIT_FLT5

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_FLT5 (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the fault 5 interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT5IE bit in HRTIM_IER register (1 or 0).

Reference Manual to LL API cross reference:

- IER FLT5IE LL_HRTIM_IsEnabledIT_FLT5

LL_HRTIM_EnableIT_SYSFLT

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_SYSFLT (HRTIM_TypeDef * HRTIMx)

Function description

Enable the system fault interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER SYSFLTIE LL_HRTIM_EnableIT_SYSFLT

LL_HRTIM_DisableIT_SYSFLT

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_SYSFLT (HRTIM_TypeDef * HRTIMx)

Function description

Disable the system fault interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER SYSFLTIE LL_HRTIM_DisableIT_SYSFLT

LL_HRTIM_IsEnabledIT_SYSFLT

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_SYSFLT (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the system fault interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of SYSFLTIE bit in HRTIM_IER register (1 or 0).

Reference Manual to LL API cross reference:

- IER SYSFLTIE LL_HRTIM_IsEnabledIT_SYSFLT

LL_HRTIM_EnableIT_BMPER

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_BMPER (HRTIM_TypeDef * HRTIMx)

Function description

Enable the burst mode period interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER BMPERIE LL_HRTIM_EnableIT_BMPER

LL_HRTIM_DisableIT_BMPER

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_BMPER (HRTIM_TypeDef * HRTIMx)

Function description

Disable the burst mode period interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER BMPERIE LL_HRTIM_DisableIT_BMPER

LL_HRTIM_IsEnabledIT_BMPER

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_BMPER (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the burst mode period interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of BMPERIE bit in HRTIM_IER register (1 or 0).

Reference Manual to LL API cross reference:

- IER BMPERIE LL_HRTIM_IsEnabledIT_BMPER

LL_HRTIM_EnableIT_SYNC

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_SYNC (HRTIM_TypeDef * HRTIMx)

Function description

Enable the synchronization input interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER SYNCIE LL_HRTIM_EnableIT_SYNC

LL_HRTIM_DisableIT_SYNC

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_SYNC (HRTIM_TypeDef * HRTIMx)

Function description

Disable the synchronization input interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER SYNCIE LL_HRTIM_DisableIT_SYNC

LL_HRTIM_IsEnabledIT_SYNC

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_SYNC (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the synchronization input interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of SYNCIE bit in HRTIM_MDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER SYNCIE LL_HRTIM_IsEnabledIT_SYNC

LL_HRTIM_EnableIT_UPDATE

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_UPDATE (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the update interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MUPDIE LL_HRTIM_EnableIT_UPDATE
- TIMxDIER UPDIE LL_HRTIM_EnableIT_UPDATE

LL_HRTIM_DisableIT_UPDATE

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_UPDATE (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the update interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MUPDIE LL_HRTIM_DisableIT_UPDATE
- TIMxDIER UPDIE LL_HRTIM_DisableIT_UPDATE

LL_HRTIM_IsEnabledIT_UPDATE

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_UPDATE (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the update interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MUPDIE/UPDIE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MUPDIE LL_HRTIM_IsEnabledIT_UPDATE
- TIMxDIER UPDIE LL_HRTIM_IsEnabledIT_UPDATE

LL_HRTIM_EnableIT_REP

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_REP (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the repetition interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MREPIE LL_HRTIM_EnableIT_REP
- TIMxDIER REPIE LL_HRTIM_EnableIT_REP

LL_HRTIM_DisableIT_REP

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_REP (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the repetition interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MREPIE LL_HRTIM_DisableIT_REP
- TIMxDIER REPIE LL_HRTIM_DisableIT_REP

LL_HRTIM_IsEnabledIT_REP

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_REP (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the repetition interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MREPIE/REPIE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MREPIE LL_HRTIM_IsEnabledIT_REP
- TIMxDIER REPIE LL_HRTIM_IsEnabledIT_REP

LL_HRTIM_EnableIT_CMP1

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_CMP1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the compare 1 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP1IE LL_HRTIM_EnableIT_CMP1
- TIMxDIER CMP1IE LL_HRTIM_EnableIT_CMP1

LL_HRTIM_DisableIT_CMP1

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_CMP1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the compare 1 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP1IE LL_HRTIM_DisableIT_CMP1
- TIMxDIER CMP1IE LL_HRTIM_DisableIT_CMP1

LL_HRTIM_IsEnabledIT_CMP1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_CMP1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare 1 interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP1IE/CMP1IE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MCMP1IE LL_HRTIM_IsEnabledIT_CMP1
- TIMxDIER CMP1IE LL_HRTIM_IsEnabledIT_CMP1

LL_HRTIM_EnableIT_CMP2

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_CMP2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the compare 2 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP2IE LL_HRTIM_EnableIT_CMP2
- TIMxDIER CMP2IE LL_HRTIM_EnableIT_CMP2

LL_HRTIM_DisableIT_CMP2

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_CMP2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the compare 2 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP2IE LL_HRTIM_DisableIT_CMP2
- TIMxDIER CMP2IE LL_HRTIM_DisableIT_CMP2

LL_HRTIM_IsEnabledIT_CMP2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_CMP2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare 2 interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP2IE/CMP2IE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MCMP2IE LL_HRTIM_IsEnabledIT_CMP2
- TIMxDIER CMP2IE LL_HRTIM_IsEnabledIT_CMP2

LL_HRTIM_EnableIT_CMP3

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_CMP3 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the compare 3 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP3IE LL_HRTIM_EnableIT_CMP3
- TIMxDIER CMP3IE LL_HRTIM_EnableIT_CMP3

LL_HRTIM_DisableIT_CMP3

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_CMP3 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the compare 3 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP3IE LL_HRTIM_DisableIT_CMP3
- TIMxDIER CMP3IE LL_HRTIM_DisableIT_CMP3

LL_HRTIM_IsEnabledIT_CMP3

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_CMP3 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare 3 interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP3IE/CMP3IE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MCMP3IE LL_HRTIM_IsEnabledIT_CMP3
- TIMxDIER CMP3IE LL_HRTIM_IsEnabledIT_CMP3

LL_HRTIM_EnableIT_CMP4

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_CMP4 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the compare 4 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP4IE LL_HRTIM_EnableIT_CMP4
- TIMxDIER CMP4IE LL_HRTIM_EnableIT_CMP4

LL_HRTIM_DisableIT_CMP4

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_CMP4 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the compare 4 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP4IE LL_HRTIM_DisableIT_CMP4
- TIMxDIER CMP4IE LL_HRTIM_DisableIT_CMP4

LL_HRTIM_IsEnabledIT_CMP4

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_CMP4 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare 4 interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP4IE/CMP4IE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MCMP4IE LL_HRTIM_IsEnabledIT_CMP4
- TIMxDIER CMP4IE LL_HRTIM_IsEnabledIT_CMP4

LL_HRTIM_EnableIT_CPT1

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_CPT1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the capture 1 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER CPT1IE LL_HRTIM_EnableIT_CPT1

LL_HRTIM_DisableIT_CPT1

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_CPT1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the capture 1 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER CPT1IE LL_HRTIM_DisableIT_CPT1

LL_HRTIM_IsEnabledIT_CPT1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_CPT1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the capture 1 interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of CPT1IE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER CPT1IE LL_HRTIM_IsEnabledIT_CPT1

LL_HRTIM_EnableIT_CPT2

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_CPT2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the capture 2 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER CPT2IE LL_HRTIM_EnableIT_CPT2

LL_HRTIM_DisableIT_CPT2

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_CPT2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the capture 2 interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER CPT2IE LL_HRTIM_DisableIT_CPT2

LL_HRTIM_IsEnabledIT_CPT2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_CPT2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the capture 2 interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of CPT2IE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER CPT2IE LL_HRTIM_IsEnabledIT_CPT2

LL_HRTIM_EnableIT_SET1

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_SET1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the output 1 set interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER SET1IE LL_HRTIM_EnableIT_SET1

LL_HRTIM_DisableIT_SET1

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_SET1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the output 1 set interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER SET1IE LL_HRTIM_DisableIT_SET1

LL_HRTIM_IsEnabledIT_SET1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_SET1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 1 set interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of SET1xIE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER SET1IE LL_HRTIM_IsEnabledIT_SET1

LL_HRTIM_EnableIT_RST1

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_RST1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the output 1 reset interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER RST1IE LL_HRTIM_EnableIT_RST1

LL_HRTIM_DisableIT_RST1

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_RST1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the output 1 reset interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER RST1IE LL_HRTIM_DisableIT_RST1

LL_HRTIM_IsEnabledIT_RST1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_RST1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 1 reset interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of RST1xIE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER RST1IE LL_HRTIM_IsEnabledIT_RST1

LL_HRTIM_EnableIT_SET2

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_SET2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the output 2 set interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER SET2IE LL_HRTIM_EnableIT_SET2

LL_HRTIM_DisableIT_SET2

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_SET2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the output 2 set interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER SET2IE LL_HRTIM_DisableIT_SET2

LL_HRTIM_IsEnabledIT_SET2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_SET2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 2 set interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of SET2xIE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER SET2IE LL_HRTIM_IsEnabledIT_SET2

LL_HRTIM_EnableIT_RST2

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_RST2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the output 2 reset interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER RST2IE LL_HRTIM_EnableIT_RST2

LL_HRTIM_DisableIT_RST2

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_RST2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the output 2 reset interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER RST2IE LL_HRTIM_DisableIT_RST2

LL_HRTIM_IsEnabledIT_RST2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_RST2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 2 reset LL_HRTIM_IsEnabledIT_RST2 is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of RST2xIE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER RST2IE LL_HRTIM_DisableIT_RST2

LL_HRTIM_EnableIT_RST

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_RST (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the reset/roll-over interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER RSTIE LL_HRTIM_EnableIT_RST

LL_HRTIM_DisableIT_RST

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_RST (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the reset/roll-over interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER RSTIE LL_HRTIM_DisableIT_RST

LL_HRTIM_IsEnabledIT_RST

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_RST (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the reset/roll-over interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of RSTIE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER RSTIE LL_HRTIM_IsEnabledIT_RST

LL_HRTIM_EnableIT_DLYPRT

Function name

__STATIC_INLINE void LL_HRTIM_EnableIT_DLYPRT (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the delayed protection interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER DLYPRTIE LL_HRTIM_EnableIT_DLYPRT

LL_HRTIM_DisableIT_DLYPRT

Function name

__STATIC_INLINE void LL_HRTIM_DisableIT_DLYPRT (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the delayed protection interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER DLYPRTIE LL_HRTIM_DisableIT_DLYPRT

LL_HRTIM_IsEnabledIT_DLYPRT

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_DLYPRT (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the delayed protection interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of DLYPRTIE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER DLYPRTIE LL_HRTIM_IsEnabledIT_DLYPRT

LL_HRTIM_EnableDMAReq_SYNC

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_SYNC (HRTIM_TypeDef * HRTIMx)

Function description

Enable the synchronization input DMA request.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER SYNCDE LL_HRTIM_EnableDMAReq_SYNC

LL_HRTIM_DisableDMAReq_SYNC

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_SYNC (HRTIM_TypeDef * HRTIMx)

Function description

Disable the synchronization input DMA request.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER SYNCDE LL_HRTIM_DisableDMAReq_SYNC

LL_HRTIM_IsEnabledDMAReq_SYNC

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_SYNC (const HRTIM_TypeDef * HRTIMx)

Function description

Indicate whether the synchronization input DMA request is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of SYNCDE bit in HRTIM_MDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER SYNCDE LL_HRTIM_IsEnabledDMAReq_SYNC

LL_HRTIM_EnableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_UPDATE (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the update DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MUPDDE LL_HRTIM_EnableDMAReq_UPDATE
- TIMxDIER UPDDE LL_HRTIM_EnableDMAReq_UPDATE

LL_HRTIM_DisableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_UPDATE (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the update DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MUPDDE LL_HRTIM_DisableDMAReq_UPDATE
- TIMxDIER UPDDE LL_HRTIM_DisableDMAReq_UPDATE

LL_HRTIM_IsEnabledDMAReq_UPDATE

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_UPDATE (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the update DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MUPDDE/UPDDE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MUPDDE LL_HRTIM_IsEnabledDMAReq_UPDATE
- TIMxDIER UPDDE LL_HRTIM_IsEnabledDMAReq_UPDATE

LL_HRTIM_EnableDMAReq_REP

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_REP (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the repetition DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MREPDE LL_HRTIM_EnableDMAReq_REP
- TIMxDIER REPDE LL_HRTIM_EnableDMAReq_REP

LL_HRTIM_DisableDMAReq_REP

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_REP (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the repetition DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MREPDE LL_HRTIM_DisableDMAReq_REP
- TIMxDIER REPDE LL_HRTIM_DisableDMAReq_REP

LL_HRTIM_IsEnabledDMAReq_REP

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_REP (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the repetition DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MREPDE/REPDE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MREPDE LL_HRTIM_IsEnabledDMAReq_REP
- TIMxDIER REPDE LL_HRTIM_IsEnabledDMAReq_REP

LL_HRTIM_EnableDMAReq_CMP1

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_CMP1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the compare 1 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP1DE LL_HRTIM_EnableDMAReq_CMP1
- TIMxDIER CMP1DE LL_HRTIM_EnableDMAReq_CMP1

LL_HRTIM_DisableDMAReq_CMP1

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_CMP1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the compare 1 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP1DE LL_HRTIM_DisableDMAReq_CMP1
- TIMxDIER CMP1DE LL_HRTIM_DisableDMAReq_CMP1

LL_HRTIM_IsEnabledDMAReq_CMP1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_CMP1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare 1 DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP1DE/CMP1DE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MCMP1DE LL_HRTIM_IsEnabledDMAReq_CMP1
- TIMxDIER CMP1DE LL_HRTIM_IsEnabledDMAReq_CMP1

LL_HRTIM_EnableDMAReq_CMP2

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_CMP2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the compare 2 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP2DE LL_HRTIM_EnableDMAReq_CMP2
- TIMxDIER CMP2DE LL_HRTIM_EnableDMAReq_CMP2

LL_HRTIM_DisableDMAReq_CMP2

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_CMP2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the compare 2 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP2DE LL_HRTIM_DisableDMAReq_CMP2
- TIMxDIER CMP2DE LL_HRTIM_DisableDMAReq_CMP2

LL_HRTIM_IsEnabledDMAReq_CMP2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_CMP2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare 2 DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP2DE/CMP2DE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MCMP2DE LL_HRTIM_IsEnabledDMAReq_CMP2
- TIMxDIER CMP2DE LL_HRTIM_IsEnabledDMAReq_CMP2

LL_HRTIM_EnableDMAReq_CMP3

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_CMP3 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the compare 3 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP3DE LL_HRTIM_EnableDMAReq_CMP3
- TIMxDIER CMP3DE LL_HRTIM_EnableDMAReq_CMP3

LL_HRTIM_DisableDMAReq_CMP3

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_CMP3 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the compare 3 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP3DE LL_HRTIM_DisableDMAReq_CMP3
- TIMxDIER CMP3DE LL_HRTIM_DisableDMAReq_CMP3

LL_HRTIM_IsEnabledDMAReq_CMP3

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_CMP3 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare 3 DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP3DE/CMP3DE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MCMP3DE LL_HRTIM_IsEnabledDMAReq_CMP3
- TIMxDIER CMP3DE LL_HRTIM_IsEnabledDMAReq_CMP3

LL_HRTIM_EnableDMAReq_CMP4

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_CMP4 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the compare 4 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP4DE LL_HRTIM_EnableDMAReq_CMP4
- TIMxDIER CMP4DE LL_HRTIM_EnableDMAReq_CMP4

LL_HRTIM_DisableDMAReq_CMP4

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_CMP4 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the compare 4 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- MDIER MCMP4DE LL_HRTIM_DisableDMAReq_CMP4
- TIMxDIER CMP4DE LL_HRTIM_DisableDMAReq_CMP4

LL_HRTIM_IsEnabledDMAReq_CMP4

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_CMP4 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the compare 4 DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_MASTER
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of MCMP4DE/CMP4DE bit in HRTIM_MDIER/HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- MDIER MCMP4DE LL_HRTIM_IsEnabledDMAReq_CMP4
- TIMxDIER CMP4DE LL_HRTIM_IsEnabledDMAReq_CMP4

LL_HRTIM_EnableDMAReq_CPT1

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_CPT1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the capture 1 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER CPT1DE LL_HRTIM_EnableDMAReq_CPT1

LL_HRTIM_DisableDMAReq_CPT1

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_CPT1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the capture 1 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER CPT1DE LL_HRTIM_DisableDMAReq_CPT1

LL_HRTIM_IsEnabledDMAReq_CPT1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_CPT1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the capture 1 DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of CPT1DE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER CPT1DE LL_HRTIM_IsEnabledDMAReq_CPT1

LL_HRTIM_EnableDMAReq_CPT2

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_CPT2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the capture 2 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER CPT2DE LL_HRTIM_EnableDMAReq_CPT2

LL_HRTIM_DisableDMAReq_CPT2

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_CPT2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the capture 2 DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

- TIMxDIER CPT2DE LL_HRTIM_DisableDMAReq_CPT2

LL_HRTIM_IsEnabledDMAReq_CPT2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_CPT2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the capture 2 DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of CPT2DE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER CPT2DE LL_HRTIM_IsEnabledDMAReq_CPT2

LL_HRTIM_EnableDMAReq_SET1

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_SET1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the output 1 set DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER SET1DE LL_HRTIM_EnableDMAReq_SET1

LL_HRTIM_DisableDMAReq_SET1

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_SET1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the output 1 set DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER SET1DE LL_HRTIM_DisableDMAReq_SET1

LL_HRTIM_IsEnabledDMAReq_SET1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_SET1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 1 set DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of SET1xDE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER SET1DE LL_HRTIM_IsEnabledDMAReq_SET1

LL_HRTIM_EnableDMAReq_RST1

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_RST1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the output 1 reset DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER RST1DE LL_HRTIM_EnableDMAReq_RST1

LL_HRTIM_DisableDMAReq_RST1

Function name

__STATIC_INLINE void LL_HRTIM_DisableDMAReq_RST1 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Disable the output 1 reset DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

Reference Manual to LL API cross reference:

- TIMxDIER RST1DE LL_HRTIM_DisableDMAReq_RST1

LL_HRTIM_IsEnabledDMAReq_RST1

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_RST1 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 1 reset interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of RST1xDE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER RST1DE LL_HRTIM_IsEnabledDMAReq_RST1

LL_HRTIM_EnableDMAReq_SET2

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_SET2 (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the output 2 set DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

LL_HRTIM_IsEnabledDMAReq_RST2

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_RST2 (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the output 2 reset DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of RST2xDE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER RST2DE LL_HRTIM_IsEnabledDMAReq_RST2

LL_HRTIM_EnableDMAReq_RST

Function name

__STATIC_INLINE void LL_HRTIM_EnableDMAReq_RST (HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Enable the reset/roll-over DMA request for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **None:**

- TIMxDIER DLYPRTDE LL_HRTIM_DisableDMAReq_DLYPRT

LL_HRTIM_IsEnabledDMAReq_DLYPRT

Function name

__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_DLYPRT (const HRTIM_TypeDef * HRTIMx, uint32_t Timer)

Function description

Indicate whether the delayed protection DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL_HRTIM_TIMER_A
  - LL_HRTIM_TIMER_B
  - LL_HRTIM_TIMER_C
  - LL_HRTIM_TIMER_D
  - LL_HRTIM_TIMER_E

Return values

- **State:** of DLYPRTDE bit in HRTIM_TIMxDIER register (1 or 0).

Reference Manual to LL API cross reference:

- TIMxDIER DLYPRTDE LL_HRTIM_IsEnabledDMAReq_DLYPRT

LL_HRTIM_DeInit

Function name

ErrorStatus LL_HRTIM_DeInit (HRTIM_TypeDef * HRTIMx)

Function description

Set HRTIM instance registers to their reset values.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **ErrorStatus:** enumeration value:
  - SUCCESS: HRTIMx registers are de-initialized
  - ERROR: invalid HRTIMx instance

LL_HRTIM_ADCTRIG_SRC24_MCMP4

ADC Trigger on master compare 4

LL_HRTIM_ADCTRIG_SRC24_MPER

ADC Trigger on master period

LL_HRTIM_ADCTRIG_SRC24_EEV6

ADC Trigger on external event 6

LL_HRTIM_ADCTRIG_SRC24_EEV7

ADC Trigger on external event 7

LL_HRTIM_ADCTRIG_SRC24_EEV8

ADC Trigger on external event 8

LL_HRTIM_ADCTRIG_SRC24_EEV9

ADC Trigger on external event 9

LL_HRTIM_ADCTRIG_SRC24_EEV10

ADC Trigger on external event 10

LL_HRTIM_ADCTRIG_SRC24_TIMACMP2

ADC Trigger on Timer A compare 2

LL_HRTIM_ADCTRIG_SRC24_TIMACMP3

ADC Trigger on Timer A compare 3

LL_HRTIM_ADCTRIG_SRC24_TIMACMP4

ADC Trigger on Timer A compare 4

LL_HRTIM_ADCTRIG_SRC24_TIMAPER

ADC Trigger on Timer A period

LL_HRTIM_ADCTRIG_SRC24_TIMBCMP2

ADC Trigger on Timer B compare 2

LL_HRTIM_ADCTRIG_SRC24_TIMBCMP3

ADC Trigger on Timer B compare 3

LL_HRTIM_ADCTRIG_SRC24_TIMBCMP4

ADC Trigger on Timer B compare 4

LL_HRTIM_ADCTRIG_SRC24_TIMBPER

ADC Trigger on Timer B period

LL_HRTIM_ADCTRIG_SRC24_TIMCCMP2

ADC Trigger on Timer C compare 2

LL_HRTIM_ADCTRIG_SRC24_TIMCCMP3

ADC Trigger on Timer C compare 3

LL_HRTIM_ADCTRIG_SRC24_TIMCCMP4

ADC Trigger on Timer C compare 4

LL_HRTIM_ADCTRIG_SRC24_TIMCPER

ADC Trigger on Timer C period

LL_HRTIM_ADCTRIG_SRC24_TIMCRST

ADC Trigger on Timer C reset

LL_HRTIM_ADCTRIG_SRC24_TIMDCMP2

ADC Trigger on Timer D compare 2

LL_HRTIM_ADCTRIG_SRC24_TIMDCMP3

ADC Trigger on Timer D compare 3

LL_HRTIM_ADCTRIG_SRC24_TIMDCMP4

ADC Trigger on Timer D compare 4

LL_HRTIM_ADCTRIG_SRC24_TIMDPER

ADC Trigger on Timer D period

LL_HRTIM_ADCTRIG_SRC24_TIMDRST

ADC Trigger on Timer D reset

LL_HRTIM_ADCTRIG_SRC24_TIMECMP2

ADC Trigger on Timer E compare 2

LL_HRTIM_ADCTRIG_SRC24_TIMECMP3

ADC Trigger on Timer E compare 3

LL_HRTIM_ADCTRIG_SRC24_TIMECMP4

ADC Trigger on Timer E compare 4

LL_HRTIM_ADCTRIG_SRC24_TIMERST

ADC Trigger on Timer E reset

ADC TRIGGER UPDATE

LL_HRTIM_ADCTRIG_UPDATE_MASTER

HRTIM_ADCxR register update is triggered by the Master timer

LL_HRTIM_ADCTRIG_UPDATE_TIMER_A

HRTIM_ADCxR register update is triggered by the Timer A

LL_HRTIM_ADCTRIG_UPDATE_TIMER_B

HRTIM_ADCxR register update is triggered by the Timer B

LL_HRTIM_ADCTRIG_UPDATE_TIMER_C

HRTIM_ADCxR register update is triggered by the Timer C

LL_HRTIM_ADCTRIG_UPDATE_TIMER_D

HRTIM_ADCxR register update is triggered by the Timer D

LL_HRTIM_ADCTRIG_UPDATE_TIMER_E

HRTIM_ADCxR register update is triggered by the Timer E

BURST MODE CLOCK SOURCE

LL_HRTIM_BM_CLKSRC_MASTER

Master timer counter reset/roll-over is used as clock source for the burst mode counter

LL_HRTIM_BM_CLKSRC_TIMER_A

Timer A counter reset/roll-over is used as clock source for the burst mode counter

LL_HRTIM_BM_CLKSRC_TIMER_B

Timer B counter reset/roll-over is used as clock source for the burst mode counter

LL_HRTIM_BM_CLKSRC_TIMER_C

Timer C counter reset/roll-over is used as clock source for the burst mode counter

LL_HRTIM_BM_CLKSRC_TIMER_D

Timer D counter reset/roll-over is used as clock source for the burst mode counter

LL_HRTIM_BM_CLKSRC_TIMER_E

Timer E counter reset/roll-over is used as clock source for the burst mode counter

LL_HRTIM_BM_CLKSRC_TIM16_OC

On-chip Event 1 (BMClk[1]), acting as a burst mode counter clock

LL_HRTIM_BM_CLKSRC_TIM17_OC

On-chip Event 2 (BMClk[2]), acting as a burst mode counter clock

LL_HRTIM_BM_CLKSRC_TIM7_TRGO

On-chip Event 3 (BMClk[3]), acting as a burst mode counter clock

LL_HRTIM_BM_CLKSRC_FHRTIM

Prescaled fHRTIM clock is used as clock source for the burst mode counter

BURST MODE OPERATING MODE

LL_HRTIM_BM_MODE_SINGLESHOT

Burst mode operates in single shot mode

LL_HRTIM_BM_MODE_CONTINOUS

Burst mode operates in continuous mode

BURST MODE PRESCALER

LL_HRTIM_BM_PRESCALER_DIV1

fBRST = fHRTIM

LL_HRTIM_BM_PRESCALER_DIV2

fBRST = fHRTIM/2

LL_HRTIM_BM_PRESCALER_DIV4

fBRST = fHRTIM/4

LL_HRTIM_BM_PRESCALER_DIV8

fBRST = fHRTIM/8

LL_HRTIM_BM_PRESCALER_DIV16

fBRST = fHRTIM/16

LL_HRTIM_BM_PRESCALER_DIV32

fBRST = fHRTIM/32

LL_HRTIM_BM_PRESCALER_DIV64

fBRST = fHRTIM/64

LL_HRTIM_BM_PRESCALER_DIV128

fBRST = fHRTIM/128

LL_HRTIM_BM_PRESCALER_DIV256

fBRST = fHRTIM/256

LL_HRTIM_BM_PRESCALER_DIV512

fBRST = fHRTIM/512

LL_HRTIM_BM_PRESCALER_DIV1024

fBRST = fHRTIM/1024

LL_HRTIM_BM_PRESCALER_DIV2048

fBRST = fHRTIM/2048

LL_HRTIM_BM_PRESCALER_DIV4096

fBRST = fHRTIM/4096

LL_HRTIM_BM_PRESCALER_DIV8192

fBRST = fHRTIM/8192

LL_HRTIM_BM_PRESCALER_DIV16384

fBRST = fHRTIM/16384

LL_HRTIM_BM_PRESCALER_DIV32768

fBRST = fHRTIM/32768

HRTIM BURST MODE STATUS

LL_HRTIM_BM_STATUS_NORMAL

Normal operation

LL_HRTIM_BM_STATUS_BURST_ONGOING

Burst operation on-going

HRTIM BURST MODE TRIGGER

LL_HRTIM_BM_TRIG_NONE

No trigger

LL_HRTIM_BM_TRIG_MASTER_RESET

Master timer reset event is starting the burst mode operation

LL_HRTIM_BM_TRIG_MASTER_REPETITION

Master timer repetition event is starting the burst mode operation

LL_HRTIM_BM_TRIG_MASTER_CMP1

Master timer compare 1 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_MASTER_CMP2

Master timer compare 2 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_MASTER_CMP3

Master timer compare 3 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_MASTER_CMP4

Master timer compare 4 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMA_RESET

Timer A reset event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMA_REPETITION

Timer A repetition event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMA_CMP1

Timer A compare 1 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMA_CMP2

Timer A compare 2 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMB_RESET

Timer B reset event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMB_REPETITION

Timer B repetition event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMB_CMP1

Timer B compare 1 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMB_CMP2

Timer B compare 2 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMC_RESET

Timer C resetevent is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMC_REPETITION

Timer C repetition event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMC_CMP1

Timer C compare 1 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMC_CMP2

Timer C compare 2 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMD_RESET

Timer D reset event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMD_REPETITION

Timer D repetition event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMD_CMP1

Timer D compare 1 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMD_CMP2

Timer D compare 2 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIME_RESET

Timer E reset event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIME_REPETITION

Timer E repetition event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIME_CMP1

Timer E compare 1 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIME_CMP2

Timer E compare 2 event is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMA_EVENT7

Timer A period following an external event 7 (conditioned by TIMA filters) is starting the burst mode operation

LL_HRTIM_BM_TRIG_TIMD_EVENT8

Timer D period following an external event 8 (conditioned by TIMD filters) is starting the burst mode operation

LL_HRTIM_BM_TRIG_EVENT_7

External event 7 conditioned by TIMA filters is starting the burst mode operation

LL_HRTIM_BM_TRIG_EVENT_8

External event 8 conditioned by TIMD filters is starting the burst mode operation

LL_HRTIM_BM_TRIG_EVENT_ONCHIP

A rising edge on an on-chip Event (for instance from GP timer or comparator) triggers the burst mode operation

BURST DMA

LL_HRTIM_BURSTDMA_NONE

No register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_MCR

MCR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_MICR

MICR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_MDIER

MDIER register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_MCNT

MCNTR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_MPER

MPER register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_MREP

MREPR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_MCMP1

MCMP1R register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_MCMP2

MCMP2R register is updated by Burst DMA accesses

MCMP3R register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_MCMP4

MCMP4R register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMMCR

TIMxCR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMICR

TIMxICR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMDIER

TIMxDIER register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMCNT

CNTxCR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMPER

PERxR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMREP

REPxR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMCMP1

CMP1xR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMCMP2

CMP2xR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMCMP3

CMP3xR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMCMP4

CMP4xR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMDTR

DTxR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMSET1R

SET1R register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMRST1R

RST1R register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMSET2R

SET2R register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMRST2R

RST1R register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMEEFR1

EEFxR1 register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMEEFR2

EEFxR2 register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMRSTR

RSTxR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMCHPR

CHPxR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMOUTR

OUTxR register is updated by Burst DMA accesses

LL_HRTIM_BURSTDMA_TIMFLTR

FLTxR register is updated by Burst DMA accesses

BURST MODE

LL_HRTIM_BURSTMODE_MAINTAINCLOCK

Timer counter clock is maintained and the timer operates normally

LL_HRTIM_BURSTMODE_RESETCOUNTER

Timer counter clock is stopped and the counter is reset

CAPTURE TRIGGER

LL_HRTIM_CAPTURETRIG_NONE

Capture trigger is disabled

LL_HRTIM_CAPTURETRIG_UPDATE

The update event triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_1

The External event 1 triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_2

The External event 2 triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_3

The External event 3 triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_4

The External event 4 triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_5

The External event 5 triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_6

The External event 6 triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_7

The External event 7 triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_8

The External event 8 triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_9

The External event 9 triggers the Capture

LL_HRTIM_CAPTURETRIG_EEV_10

The External event 10 triggers the Capture

LL_HRTIM_CAPTURETRIG_TA1_SET

Capture is triggered by TA1 output inactive to active transition

LL_HRTIM_CAPTURETRIG_TA1_RESET

Capture is triggered by TA1 output active to inactive transition

LL_HRTIM_CAPTURETRIG_TIMA_CMP1

Timer A Compare 1 triggers Capture

LL_HRTIM_CAPTURETRIG_TIMA_CMP2

Timer A Compare 2 triggers Capture

LL_HRTIM_CAPTURETRIG_TB1_SET

Capture is triggered by TB1 output inactive to active transition

LL_HRTIM_CAPTURETRIG_TB1_RESET

Capture is triggered by TB1 output active to inactive transition

LL_HRTIM_CAPTURETRIG_TIMB_CMP1

Timer B Compare 1 triggers Capture

LL_HRTIM_CAPTURETRIG_TIMB_CMP2

Timer B Compare 2 triggers Capture

LL_HRTIM_CAPTURETRIG_TC1_SET

Capture is triggered by TC1 output inactive to active transition

LL_HRTIM_CAPTURETRIG_TC1_RESET

Capture is triggered by TC1 output active to inactive transition

LL_HRTIM_CAPTURETRIG_TIMC_CMP1

Timer C Compare 1 triggers Capture

LL_HRTIM_CAPTURETRIG_TIMC_CMP2

Timer C Compare 2 triggers Capture

LL_HRTIM_CAPTURETRIG_TD1_SET

Capture is triggered by TD1 output inactive to active transition

LL_HRTIM_CAPTURETRIG_TD1_RESET

Capture is triggered by TD1 output active to inactive transition

LL_HRTIM_CAPTURETRIG_TIMD_CMP1

Timer D Compare 1 triggers Capture

LL_HRTIM_CAPTURETRIG_TIMD_CMP2

Timer D Compare 2 triggers Capture

LL_HRTIM_CAPTURETRIG_TE1_SET

Capture is triggered by TE1 output inactive to active transition

LL_HRTIM_CAPTURETRIG_TE1_RESET

Capture is triggered by TE1 output active to inactive transition

LL_HRTIM_CAPTURETRIG_TIME_CMP1

Timer E Compare 1 triggers Capture

LL_HRTIM_CAPTURETRIG_TIME_CMP2

Timer E Compare 2 triggers Capture

CAPTURE UNIT ID

LL_HRTIM_CAPTUREUNIT_1

Capture unit 1 identifier

LL_HRTIM_CAPTUREUNIT_2

Capture unit 2 identifier

CHOPPER MODE DUTY CYCLE

LL_HRTIM_CHP_DUTYCYCLE_0

Only 1st pulse is present

LL_HRTIM_CHP_DUTYCYCLE_125

Duty cycle of the carrier signal is 12.5 %

LL_HRTIM_CHP_DUTYCYCLE_250

Duty cycle of the carrier signal is 25 %

LL_HRTIM_CHP_DUTYCYCLE_375

Duty cycle of the carrier signal is 37.5 %

LL_HRTIM_CHP_DUTYCYCLE_500

Duty cycle of the carrier signal is 50 %

LL_HRTIM_CHP_DUTYCYCLE_625

Duty cycle of the carrier signal is 62.5 %

LL_HRTIM_CHP_DUTYCYCLE_750

Duty cycle of the carrier signal is 75 %

LL_HRTIM_CHP_DUTYCYCLE_875

Duty cycle of the carrier signal is 87.5 %

CHOPPER MODE PRESCALER

LL_HRTIM_CHP_PRESCALER_DIV16

tSTPW = tHRTIM x 256

COMPARE MODE

LL_HRTIM_COMPAREMODE_REGULAR

standard compare mode

LL_HRTIM_COMPAREMODE_DELAY_NOTIMEOUT

Compare event generated only if a capture has occurred

LL_HRTIM_COMPAREMODE_DELAY_CMP1

Compare event generated if a capture has occurred or after a Compare 1 match (timeout if capture event is missing)

LL_HRTIM_COMPAREMODE_DELAY_CMP3

Compare event generated if a capture has occurred or after a Compare 3 match (timeout if capture event is missing)

COMPARE UNIT ID

LL_HRTIM_COMPAREUNIT_2

Compare unit 2 identifier

LL_HRTIM_COMPAREUNIT_4

Compare unit 4 identifier

CURRENT PUSH-PULL STATUS

LL_HRTIM_CPPSTAT_OUTPUT1

Signal applied on output 1 and output 2 forced inactive

LL_HRTIM_CPPSTAT_OUTPUT2

Signal applied on output 2 and output 1 forced inactive

CROSSBAR INPUT

LL_HRTIM_CROSSBAR_NONE

Reset the output set crossbar

LL_HRTIM_CROSSBAR_RESYNC

Timer reset event coming solely from software or SYNC input forces an output level transition

LL_HRTIM_CROSSBAR_TIMPER

Timer period event forces an output level transition

LL_HRTIM_CROSSBAR_TIMCMP1

Timer compare 1 event forces an output level transition

LL_HRTIM_CROSSBAR_TIMCMP2

Timer compare 2 event forces an output level transition

LL_HRTIM_CROSSBAR_TIMCMP3

Timer compare 3 event forces an output level transition

LL_HRTIM_CROSSBAR_TIMCMP4

Timer compare 4 event forces an output level transition

LL_HRTIM_CROSSBAR_MASTERPER

The master timer period event forces an output level transition

LL_HRTIM_CROSSBAR_MASTERCMP1

Master Timer compare 1 event forces an output level transition

LL_HRTIM_CROSSBAR_MASTERCMP2

Master Timer compare 2 event forces an output level transition

LL_HRTIM_CROSSBAR_MASTERCMP3

Master Timer compare 3 event forces an output level transition

LL_HRTIM_CROSSBAR_MASTERCMP4

Master Timer compare 4 event forces an output level transition

LL_HRTIM_CROSSBAR_TIMEV_1

Timer event 1 forces an output level transition

LL_HRTIM_CROSSBAR_TIMEV_2

Timer event 2 forces an output level transition

LL_HRTIM_CROSSBAR_TIMEV_3

Timer event 3 forces an output level transition

LL_HRTIM_CROSSBAR_TIMEV_4

Timer event 4 forces an output level transition

LL_HRTIM_CROSSBAR_TIMEV_5

Timer event 5 forces an output level transition

LL_HRTIM_CROSSBAR_TIMEV_6

Timer event 6 forces an output level transition

LL_HRTIM_CROSSBAR_TIMEV_7

Timer event 7 forces an output level transition

LL_HRTIM_CROSSBAR_TIMEV_8

Timer event 8 forces an output level transition

LL_HRTIM_CROSSBAR_TIMEV_9

Timer event 9 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_1

External event 1 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_2

External event 2 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_3

External event 3 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_4

External event 4 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_5

External event 5 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_6

External event 6 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_7

External event 7 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_8

External event 8 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_9

External event 9 forces an output level transition

LL_HRTIM_CROSSBAR_EEV_10

External event 10 forces an output level transition

LL_HRTIM_CROSSBAR_UPDATE

Timer register update event forces an output level transition

DAC TRIGGER

LL_HRTIM_DACTRIG_NONE

No DAC synchronization event generated

LL_HRTIM_DACTRIG_DACTRIGOUT_1

DAC synchronization event generated on DACTrigOut1 output upon timer update

LL_HRTIM_DACTRIG_DACTRIGOUT_2

DAC synchronization event generated on DACTrigOut2 output upon timer update

LL_HRTIM_DACTRIG_DACTRIGOUT_3

DAC synchronization event generated on DACTrigOut3 output upon timer update

DELAYED PROTECTION (DLYPRT) MODE

LL_HRTIM_DLYPRT_DELAYOUT1_EEV6

Timers A, B, C: Output 1 delayed Idle on external Event 6

LL_HRTIM_DLYPRT_DELAYOUT2_EEV6

Timers A, B, C: Output 2 delayed Idle on external Event 6

LL_HRTIM_DLYPRT_DELAYBOTH_EEV6

Timers A, B, C: Output 1 and output 2 delayed Idle on external Event 6

LL_HRTIM_DLYPRT_BALANCED_EEV6

Timers A, B, C: Balanced Idle on external Event 6

LL_HRTIM_DLYPRT_DELAYOUT1_EEV7

Timers A, B, C: Output 1 delayed Idle on external Event 7

LL_HRTIM_DLYPRT_DELAYOUT2_EEV7

Timers A, B, C: Output 2 delayed Idle on external Event 7

LL_HRTIM_DLYPRT_DELAYBOTH_EEV7

Timers A, B, C: Output 1 and output2 delayed Idle on external Event 7

LL_HRTIM_DLYPRT_BALANCED_EEV7

Timers A, B, C: Balanced Idle on external Event 7

LL_HRTIM_DLYPRT_DELAYOUT1_EEV8

Timers D, E: Output 1 delayed Idle on external Event 8

LL_HRTIM_DLYPRT_DELAYOUT2_EEV8

Timers D, E: Output 2 delayed Idle on external Event 8

LL_HRTIM_DLYPRT_DELAYBOTH_EEV8

Timers D, E: Output 1 and output 2 delayed Idle on external Event 8

LL_HRTIM_DLYPRT_BALANCED_EEV8

Timers D, E: Balanced Idle on external Event 8

LL_HRTIM_DLYPRT_DELAYOUT1_EEV9

Timers D, E: Output 1 delayed Idle on external Event 9

LL_HRTIM_DLYPRT_DELAYOUT2_EEV9

Timers D, E: Output 2 delayed Idle on external Event 9

LL_HRTIM_DLYPRT_DELAYBOTH_EEV9

Timers D, E: Output 1 and output2 delayed Idle on external Event 9

LL_HRTIM_DLYPRT_BALANCED_EEV9

Timers D, E: Balanced Idle on external Event 9

DEADTIME FALLING SIGN

LL_HRTIM_DT_FALLING_POSITIVE

Positive deadtime on falling edge

LL_HRTIM_DT_FALLING_NEGATIVE

Negative deadtime on falling edge

DEADTIME PRESCALER

LL_HRTIM_DT_PRESCALER_MUL8

fDTG = fHRTIM * 8

LL_HRTIM_DT_PRESCALER_MUL4

fDTG = fHRTIM * 4

LL_HRTIM_DT_PRESCALER_MUL2

fDTG = fHRTIM * 2

LL_HRTIM_DT_PRESCALER_DIV1

fDTG = fHRTIM

LL_HRTIM_DT_PRESCALER_DIV2

fDTG = fHRTIM / 2

LL_HRTIM_DT_PRESCALER_DIV4

fDTG = fHRTIM / 4

LL_HRTIM_DT_PRESCALER_DIV8

fDTG = fHRTIM / 8

LL_HRTIM_DT_PRESCALER_DIV16

fDTG = fHRTIM / 16

DEADTIME RISING SIGN

LL_HRTIM_DT_RISING_POSITIVE

Positive deadtime on rising edge

LL_HRTIM_DT_RISING_NEGATIVE

Negative deadtime on rising edge

EXTERNAL EVENT FAST MODE

LL_HRTIM_EE_FASTMODE_DISABLE

External Event is re-synchronized by the HRTIM logic before acting on outputs

LL_HRTIM_EE_FASTMODE_ENABLE

External Event is acting asynchronously on outputs (low latency mode)

EXTERNAL EVENT DIGITAL FILTER

LL_HRTIM_EE_FILTER_NONE

Filter disabled

LL_HRTIM_EE_FILTER_1

fSAMPLING = fHRTIM, N=2

LL_HRTIM_EE_FILTER_2

fSAMPLING = fHRTIM, N=4

LL_HRTIM_EE_FILTER_3

LL_HRTIM_OUTPUT_TD2

Timer D - Output 2 identifier

LL_HRTIM_OUTPUT_TE1

Timer E - Output 1 identifier

LL_HRTIM_OUTPUT_TE2

Timer E - Output 2 identifier

OUTPUT STATE

LL_HRTIM_OUTPUTSTATE_IDLE

Main operating mode, where the output can take the active or inactive level as programmed in the crossbar unit

LL_HRTIM_OUTPUTSTATE_RUN

Default operating state (e.g. after an HRTIM reset, when the outputs are disabled by software or during a burst mode operation)

LL_HRTIM_OUTPUTSTATE_FAULT

Safety state, entered in case of a shut-down request on FAULTx inputs

OUTPUT BURST MODE ENTRY MODE

LL_HRTIM_OUT_BM_ENTRYMODE_REGULAR

The programmed Idle state is applied immediately to the Output

LL_HRTIM_OUT_BM_ENTRYMODE_DELAYED

Deadtime is inserted on output before entering the idle mode

OUTPUT CHOPPER MODE

LL_HRTIM_OUT_CHOPPERMODE_DISABLED

Output signal is not altered

LL_HRTIM_OUT_CHOPPERMODE_ENABLED

Output signal is chopped by a carrier signal

OUTPUT FAULT STATE

LL_HRTIM_OUT_FAULTSTATE_NO_ACTION

The output is not affected by the fault input

LL_HRTIM_OUT_FAULTSTATE_ACTIVE

Output at active level when in FAULT state

LL_HRTIM_OUT_FAULTSTATE_INACTIVE

Output at inactive level when in FAULT state

LL_HRTIM_OUT_FAULTSTATE_HIGHZ

Output is tri-stated when in FAULT state

OUTPUT IDLE LEVEL

LL_HRTIM_OUT_IDLELEVEL_INACTIVE

Output at inactive level when in IDLE state

LL_HRTIM_OUT_IDLELEVEL_ACTIVE

Output at active level when in IDLE state

OUTPUT IDLE MODE

LL_HRTIM_OUT_NO_IDLE

The output is not affected by the burst mode operation

LL_HRTIM_OUT_IDLE_WHEN_BURST

The output is in idle state when requested by the burst mode controller

OUTPUT LEVEL

LL_HRTIM_OUT_LEVEL_INACTIVE

Corresponds to a logic level 0 for a positive polarity (High) and to a logic level 1 for a negative polarity (Low)

LL_HRTIM_OUT_LEVEL_ACTIVE

Corresponds to a logic level 1 for a positive polarity (High) and to a logic level 0 for a negative polarity (Low)

OUPUT_POLARITY

LL_HRTIM_OUT_POSITIVE_POLARITY

Output is active HIGH

LL_HRTIM_OUT_NEGATIVE_POLARITY

Output is active LOW

PRESCALER RATIO

LL_HRTIM_PRESCALERRATIO_DIV1

fHRCK: fHRTIM = 144 MHz - Resolution: 6.95 ns - Min PWM frequency: 2.2 kHz (fHRTIM=144MHz)

LL_HRTIM_PRESCALERRATIO_DIV2

fHRCK: fHRTIM / 2 = 72 MHz - Resolution: 13.88 ns- Min PWM frequency: 1.1 kHz (fHRTIM=144MHz)

LL_HRTIM_PRESCALERRATIO_DIV4

fHRCK: fHRTIM / 4 = 36 MHz - Resolution: 27.7 ns- Min PWM frequency: 550Hz (fHRTIM=144MHz)

RESET TRIGGER

LL_HRTIM_RESETTRIG_NONE

No counter reset trigger

LL_HRTIM_RESETTRIG_UPDATE

The timer counter is reset upon update event

LL_HRTIM_RESETTRIG_CMP2

The timer counter is reset upon Timer Compare 2 event

LL_HRTIM_RESETTRIG_CMP4

The timer counter is reset upon Timer Compare 4 event

LL_HRTIM_RESETTRIG_MASTER_PER

The timer counter is reset upon master timer period event

LL_HRTIM_RESETTRIG_MASTER_CMP1

The timer counter is reset upon master timer Compare 1 event

LL_HRTIM_RESETTRIG_MASTER_CMP2

The timer counter is reset upon master timer Compare 2 event

LL_HRTIM_RESETTRIG_MASTER_CMP3

The timer counter is reset upon master timer Compare 3 event

LL_HRTIM_RESETTRIG_MASTER_CMP4

The timer counter is reset upon master timer Compare 4 event

LL_HRTIM_RESETTRIG_EEV_1

The timer counter is reset upon external event 1

LL_HRTIM_RESETTRIG_EEV_2

The timer counter is reset upon external event 2

LL_HRTIM_RESETTRIG_EEV_3

The timer counter is reset upon external event 3

LL_HRTIM_RESETTRIG_EEV_4

The timer counter is reset upon external event 4

LL_HRTIM_RESETTRIG_EEV_5

The timer counter is reset upon external event 5

LL_HRTIM_RESETTRIG_EEV_6

The timer counter is reset upon external event 6

LL_HRTIM_RESETTRIG_EEV_7

The timer counter is reset upon external event 7

LL_HRTIM_RESETTRIG_EEV_8

The timer counter is reset upon external event 8

LL_HRTIM_RESETTRIG_EEV_9

The timer counter is reset upon external event 9

LL_HRTIM_RESETTRIG_EEV_10

The timer counter is reset upon external event 10

LL_HRTIM_RESETTRIG_OTHER1_CMP1

The timer counter is reset upon other timer Compare 1 event

LL_HRTIM_RESETTRIG_OTHER1_CMP2

The timer counter is reset upon other timer Compare 2 event

LL_HRTIM_RESETTRIG_OTHER1_CMP4

The timer counter is reset upon other timer Compare 4 event

LL_HRTIM_RESETTRIG_OTHER2_CMP1

The timer counter is reset upon other timer Compare 1 event

LL_HRTIM_RESETTRIG_OTHER2_CMP2

The timer counter is reset upon other timer Compare 2 event

LL_HRTIM_RESETTRIG_OTHER2_CMP4

The timer counter is reset upon other timer Compare 4 event

LL_HRTIM_RESETTRIG_OTHER3_CMP1

The timer counter is reset upon other timer Compare 1 event

LL_HRTIM_RESETTRIG_OTHER3_CMP2

The timer counter is reset upon other timer Compare 2 event

LL_HRTIM_RESETTRIG_OTHER3_CMP4

The timer counter is reset upon other timer Compare 4 event

LL_HRTIM_RESETTRIG_OTHER4_CMP1

The timer counter is reset upon other timer Compare 1 event

LL_HRTIM_RESETTRIG_OTHER4_CMP2

The timer counter is reset upon other timer Compare 2 event

LL_HRTIM_RESETTRIG_OTHER4_CMP4

The timer counter is reset upon other timer Compare 4 event

SYNCHRONIZATION INPUT SOURCE

LL_HRTIM_SYNCIN_SRC_NONE

HRTIM is not synchronized and runs in standalone mode

LL_HRTIM_SYNCIN_SRC_TIM_EVENT

The HRTIM is synchronized with the on-chip timer

LL_HRTIM_SYNCIN_SRC_EXTERNAL_EVENT

A positive pulse on SYNCIN input triggers the HRTIM

SYNCHRONIZATION OUTPUT POLARITY

LL_HRTIM_SYNCOUT_DISABLED

Synchronization output event is disabled

LL_HRTIM_SYNCOUT_POSITIVE_PULSE

SCOUT pin has a low idle level and issues a positive pulse of 16 fHRTIM clock cycles length for the synchronization

LL_HRTIM_SYNCOUT_NEGATIVE_PULSE

SCOUT pin has a high idle level and issues a negative pulse of 16 fHRTIM clock cycles length for the synchronization

SYNCHRONIZATION OUTPUT SOURCE

LL_HRTIM_SYNCOUT_SRC_MASTER_START

A pulse is sent on HRTIM_SCOUT output and hrtim_out_sync2 upon master timer start event

LL_HRTIM_SYNCOUT_SRC_MASTER_CMP1

A pulse is sent on HRTIM_SCOUT output and hrtim_out_sync2 upon master timer compare 1 event

LL_HRTIM_SYNCOUT_SRC_TIMA_START

A pulse is sent on HRTIM_SCOUT output and hrtim_out_sync2 upon timer A start or reset events

LL_HRTIM_SYNCOUT_SRC_TIMA_CMP1

A pulse is sent on HRTIM_SCOUT output and hrtim_out_sync2 upon timer A compare 1 event

TIMER ID

LL_HRTIM_TIMER_NONE

Master timer identifier

LL_HRTIM_TIMER_MASTER

Master timer identifier

LL_HRTIM_TIMER_A

Timer A identifier

LL_HRTIM_TIMER_B

Timer B identifier

LL_HRTIM_TIMER_C

Timer C identifier

LL_HRTIM_TIMER_D

Timer D identifier

LL_HRTIM_TIMER_E

Timer E identifier

LL_HRTIM_TIMER_X

LL_HRTIM_TIMER_ALL

TIMER EXTERNAL EVENT FILTER

LL_HRTIM_EEFLTR_NONE

LL_HRTIM_EEFLTR_BLANKINGCMP1

Blanking from counter reset/roll-over to Compare 1

LL_HRTIM_EEFLTR_BLANKINGCMP2

Blanking from counter reset/roll-over to Compare 2

LL_HRTIM_EEFLTR_BLANKINGCMP3

Blanking from counter reset/roll-over to Compare 3

LL_HRTIM_EEFLTR_BLANKINGCMP4

Blanking from counter reset/roll-over to Compare 4

LL_HRTIM_EEFLTR_BLANKINGFLTR1

Blanking from another timing unit: TIMFLTR1 source

LL_HRTIM_EEFLTR_BLANKINGFLTR2

Blanking from another timing unit: TIMFLTR2 source

LL_HRTIM_EEFLTR_BLANKINGFLTR3

Blanking from another timing unit: TIMFLTR3 source

LL_HRTIM_EEFLTR_BLANKINGFLTR4

Blanking from another timing unit: TIMFLTR4 source

LL_HRTIM_EEFLTR_BLANKINGFLTR5

Blanking from another timing unit: TIMFLTR5 source

LL_HRTIM_EEFLTR_BLANKINGFLTR6

Blanking from another timing unit: TIMFLTR6 source

LL_HRTIM_EEFLTR_BLANKINGFLTR7

Blanking from another timing unit: TIMFLTR7 source

LL_HRTIM_EEFLTR_BLANKINGFLTR8

Blanking from another timing unit: TIMFLTR8 source

LL_HRTIM_EEFLTR_WINDOWINGCMP2

Windowing from counter reset/roll-over to Compare 2

LL_HRTIM_EEFLTR_WINDOWINGCMP3

Windowing from counter reset/roll-over to Compare 3

LL_HRTIM_EEFLTR_WINDOWINGTIM

Windowing from another timing unit: TIMWIN source

TIMER EXTERNAL EVENT LATCH STATUS

LL_HRTIM_EELATCH_DISABLED

Event is ignored if it happens during a blank, or passed through during a window

LL_HRTIM_EELATCH_ENABLED

Event is latched and delayed till the end of the blanking or windowing period

UPDATE GATING

LL_HRTIM_UPDATEGATING_INDEPENDENT

Update done independently from the DMA burst transfer completion

LL_HRTIM_UPDATEGATING_DMABURST

Update done when the DMA burst transfer is completed

LL_HRTIM_UPDATEGATING_DMABURST_UPDATE

Update done on timer roll-over following a DMA burst transfer completion

LL_HRTIM_UPDATEGATING_UPDEN1

Slave timer only - Update done on a rising edge of HRTIM update enable input 1

LL_HRTIM_UPDATEGATING_UPDEN2

Slave timer only - Update done on a rising edge of HRTIM update enable input 2

LL_HRTIM_UPDATEGATING_UPDEN3

Slave timer only - Update done on a rising edge of HRTIM update enable input 3

LL_HRTIM_UPDATEGATING_UPDEN1_UPDATE

Slave timer only - Update done on the update event following a rising edge of HRTIM update enable input 1

LL_HRTIM_UPDATEGATING_UPDEN2_UPDATE

Slave timer only - Update done on the update event following a rising edge of HRTIM update enable input 2

LL_HRTIM_UPDATEGATING_UPDEN3_UPDATE

Slave timer only - Update done on the update event following a rising edge of HRTIM update enable input 3

UPDATE TRIGGER

LL_HRTIM_UPDATETRIG_NONE

Register update is disabled

LL_HRTIM_UPDATETRIG_MASTER

Register update is triggered by the master timer update

LL_HRTIM_UPDATETRIG_TIMER_A

Register update is triggered by the timer A update

LL_HRTIM_UPDATETRIG_TIMER_B

Register update is triggered by the timer B update

LL_HRTIM_UPDATETRIG_TIMER_C

Register update is triggered by the timer C update

LL_HRTIM_UPDATETRIG_TIMER_D

Register update is triggered by the timer D update

LL_HRTIM_UPDATETRIG_TIMER_E

Register update is triggered by the timer E update

LL_HRTIM_UPDATETRIG_REPETITION

Register update is triggered when the counter rolls over and HRTIM_REPx = 0

LL_HRTIM_UPDATETRIG_RESET

Register update is triggered by counter reset or roll-over to 0 after reaching the period value in continuous mode

Exported_Macros

__LL_HRTIM_GET_OUTPUT_STATE

Description:

- HELPER macro returning the output state from output enable/disable status.

Parameters:

- __OUTPUT_STATUS_EN__: output enable status
- __OUTPUT_STATUS_DIS__: output Disable status

Return value:

- Returned: value can be one of the following values:
  - LL_HRTIM_OUTPUTSTATE_IDLE
  - LL_HRTIM_OUTPUTSTATE_RUN
  - LL_HRTIM_OUTPUTSTATE_FAULT

Common Write and read registers Macros

LL_HRTIM_WriteReg

Description:

- Write a value in HRTIM register.

Parameters:

- __INSTANCE__: HRTIM Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_HRTIM_ReadReg

Description:

- Read a value in HRTIM register.

Parameters:

- __INSTANCE__: HRTIM Instance
- __REG__: Register to be read

Return value:

- Register: value

112 LL HSEM Generic Driver

112.1 HSEM Firmware driver API description

The following section lists the various functions of the HSEM library.

112.1.1 Detailed description of functions

LL_HSEM_IsSemaphoreLocked

Function name

__STATIC_INLINE uint32_t LL_HSEM_IsSemaphoreLocked (HSEM_TypeDef * HSEMx, uint32_t Semaphore)

Function description

Return 1 if the semaphore is locked, else return 0.

Parameters

- **HSEMx:** HSEM Instance.
- **Semaphore:** Semaphore number. Value between Min_Data=0 and Max_Data=31

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- R LOCK LL_HSEM_IsSemaphoreLocked

LL_HSEM_GetCoreId

Function name

__STATIC_INLINE uint32_t LL_HSEM_GetCoreId (HSEM_TypeDef * HSEMx, uint32_t Semaphore)

Function description

Get core id.

Parameters

- **HSEMx:** HSEM Instance.
- **Semaphore:** Semaphore number. Value between Min_Data=0 and Max_Data=31

Return values

- **Returned:** value can be one of the following values:
  - LL_HSEM_COREID_NONE
  - LL_HSEM_COREID_CPU1
  - LL_HSEM_COREID_CPU2

Reference Manual to LL API cross reference:

- R COREID LL_HSEM_GetCoreId

LL_HSEM_GetProcessId

Function name

__STATIC_INLINE uint32_t LL_HSEM_GetProcessId (HSEM_TypeDef * HSEMx, uint32_t Semaphore)

Function description

Get process id.

Parameters

- **HSEMx:** HSEM Instance.
- **Semaphore:** Semaphore number. Value between Min_Data=0 and Max_Data=31

Return values

- **Process:** number. Value between Min_Data=0 and Max_Data=255

Reference Manual to LL API cross reference:

- R PROCID LL_HSEM_GetProcessId

LL_HSEM_SetLock

Function name

__STATIC_INLINE void LL_HSEM_SetLock (HSEM_TypeDef * HSEMx, uint32_t Semaphore, uint32_t process)

Function description

Get the lock by writing in R register.

Parameters

- **HSEMx:** HSEM Instance.
- **Semaphore:** Semaphore number. Value between Min_Data=0 and Max_Data=31
- **process:** Process id. Value between Min_Data=0 and Max_Data=255

Return values

- **None:**

Notes

- The R register has to be read to determined if the lock is taken.

Reference Manual to LL API cross reference:

- R LOCK LL_HSEM_SetLock
- R COREID LL_HSEM_SetLock
- R PROCID LL_HSEM_SetLock

LL_HSEM_2StepLock

Function name

__STATIC_INLINE uint32_t LL_HSEM_2StepLock (HSEM_TypeDef * HSEMx, uint32_t Semaphore, uint32_t process)

Function description

Get the lock with 2-step lock.

Parameters

- **HSEMx:** HSEM Instance.
- **Semaphore:** Semaphore number. Value between Min_Data=0 and Max_Data=31
- **process:** Process id. Value between Min_Data=0 and Max_Data=255

Return values

- **1:** lock fail, 0 lock successful or already locked by same process and core

Reference Manual to LL API cross reference:

- R LOCK LL_HSEM_2StepLock
- R COREID LL_HSEM_2StepLock
- R PROCID LL_HSEM_2StepLock

LL_HSEM_1StepLock

Function name

__STATIC_INLINE uint32_t LL_HSEM_1StepLock (HSEM_TypeDef * HSEMx, uint32_t Semaphore)

Function description

Get the lock with 1-step lock.

Parameters

- **HSEMx:** HSEM Instance.
- **Semaphore:** Semaphore number. Value between Min_Data=0 and Max_Data=31

Return values

- **1:** lock fail, 0 lock successful or already locked by same core

Reference Manual to LL API cross reference:

- RLR LOCK LL_HSEM_1StepLock
- RLR COREID LL_HSEM_1StepLock
- RLR PROCID LL_HSEM_1StepLock

LL_HSEM_ReleaseLock

Function name

__STATIC_INLINE void LL_HSEM_ReleaseLock (HSEM_TypeDef * HSEMx, uint32_t Semaphore, uint32_t process)

Function description

Release the lock of the semaphore.

Parameters

- **HSEMx:** HSEM Instance.
- **Semaphore:** Semaphore number. Value between Min_Data=0 and Max_Data=31
- **process:** Process number. Value between Min_Data=0 and Max_Data=255

Return values

- **None:**

Notes

- In case of LL_HSEM_1StepLock usage to lock a semaphore, the process is 0.

Reference Manual to LL API cross reference:

- R LOCK LL_HSEM_ReleaseLock

LL_HSEM_GetStatus

Function name

__STATIC_INLINE uint32_t LL_HSEM_GetStatus (HSEM_TypeDef * HSEMx, uint32_t Semaphore)

Function description

Get the lock status of the semaphore.

Parameters

- **HSEMx:** HSEM Instance.
- **Semaphore:** Semaphore number. Value between Min_Data=0 and Max_Data=31

Return values

- **0:** semaphore is free, 1 semaphore is locked

Reference Manual to LL API cross reference:

- R LOCK LL_HSEM_GetStatus

LL_HSEM_SetKey

Function name

__STATIC_INLINE void LL_HSEM_SetKey (HSEM_TypeDef * HSEMx, uint32_t key)

Function description

Set the key.

Parameters

- **HSEMx:** HSEM Instance.
- **key:** Key value.

Return values

- **None:**

Reference Manual to LL API cross reference:

- KEYR KEY LL_HSEM_SetKey

LL_HSEM_GetKey

Function name

__STATIC_INLINE uint32_t LL_HSEM_GetKey (HSEM_TypeDef * HSEMx)

Function description

Get the key.

Parameters

- **HSEMx:** HSEM Instance.

Return values

- **key:** to unlock all semaphore from the same core

Reference Manual to LL API cross reference:

- KEYR KEY LL_HSEM_GetKey

LL_HSEM_ResetAllLock

Function name

__STATIC_INLINE void LL_HSEM_ResetAllLock (HSEM_TypeDef * HSEMx, uint32_t key, uint32_t core)

Function description

Release all semaphore with the same core id.

Parameters

- **HSEMx:** HSEM Instance.
- **key:** Key value.
- **core:** This parameter can be one of the following values:
  - LL_HSEM_COREID_CPU1
  - LL_HSEM_COREID_CPU2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR KEY LL_HSEM_ResetAllLock
- CR SEC LL_HSEM_ResetAllLock
- CR PRIV LL_HSEM_ResetAllLock

LL_HSEM_EnableIT_C1IER

Function name

__STATIC_INLINE void LL_HSEM_EnableIT_C1IER (HSEM_TypeDef * HSEMx, uint32_t SemaphoreMask)

Function description

Enable interrupt.

Parameters

- **HSEMx:** HSEM Instance.
- **SemaphoreMask:** This parameter can be a combination of the following values:
  - LL_HSEM_SEMAPHORE_0
  - LL_HSEM_SEMAPHORE_1
  - LL_HSEM_SEMAPHORE_2
  - LL_HSEM_SEMAPHORE_3

LL_HSEM_WriteReg

Description:

- Write a value in HSEM register.

Parameters:

- __INSTANCE__: HSEM Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_HSEM_ReadReg

Description:

- Read a value in HSEM register.

Parameters:

- __INSTANCE__: HSEM Instance
- __REG__: Register to be read

Return value:

- Register: value

113 LL I2C Generic Driver

113.1 I2C Firmware driver registers structures

113.1.1 LL_I2C_InitTypeDef

LL_I2C_InitTypeDef is defined in the stm32h7xx_ll_i2c.h

Data Fields

- ***uint32_t PeripheralMode***
- ***uint32_t Timing***
- ***uint32_t AnalogFilter***
- ***uint32_t DigitalFilter***
- ***uint32_t OwnAddress1***
- ***uint32_t TypeAcknowledge***
- ***uint32_t OwnAddrSize***

Field Documentation

- ***uint32_t LL_I2C_InitTypeDef::PeripheralMode***

  Specifies the peripheral mode. This parameter can be a value of ***I2C_LL_EC_PERIPHERAL_MODE***.This feature can be modified afterwards using unitary function **LL_I2C_SetMode()**.
- ***uint32_t LL_I2C_InitTypeDef::Timing***

  Specifies the SDA setup, hold time and the SCL high, low period values. This parameter must be set by referring to the STM32CubeMX Tool and the helper macro **__LL_I2C_CONVERT_TIMINGS()**.This feature can be modified afterwards using unitary function **LL_I2C_SetTiming()**.
- ***uint32_t LL_I2C_InitTypeDef::AnalogFilter***

  Enables or disables analog noise filter. This parameter can be a value of ***I2C_LL_EC_ANALOGFILTER_SELECTION***.This feature can be modified afterwards using unitary functions **LL_I2C_EnableAnalogFilter()** or **LL_I2C_DisableAnalogFilter()**.
- ***uint32_t LL_I2C_InitTypeDef::DigitalFilter***

  Configures the digital noise filter. This parameter can be a number between Min_Data = 0x00 and Max_Data = 0x0F.This feature can be modified afterwards using unitary function **LL_I2C_SetDigitalFilter()**.
- ***uint32_t LL_I2C_InitTypeDef::OwnAddress1***

  Specifies the device own address 1. This parameter must be a value between Min_Data = 0x00 and Max_Data = 0x3FF.This feature can be modified afterwards using unitary function **LL_I2C_SetOwnAddress1()**.
- ***uint32_t LL_I2C_InitTypeDef::TypeAcknowledge***

  Specifies the ACKnowledge or Non ACKnowledge condition after the address receive match code or next received byte. This parameter can be a value of ***I2C_LL_EC_I2C_ACKNOWLEDGE***.This feature can be modified afterwards using unitary function **LL_I2C_AcknowledgeNextData()**.
- ***uint32_t LL_I2C_InitTypeDef::OwnAddrSize***

  Specifies the device own address 1 size (7-bit or 10-bit). This parameter can be a value of ***I2C_LL_EC_OWNADDRESS1***.This feature can be modified afterwards using unitary function **LL_I2C_SetOwnAddress1()**.

113.2 I2C Firmware driver API description

The following section lists the various functions of the I2C library.

113.2.1 Detailed description of functions

LL_I2C_Enable

Function name

__STATIC_INLINE void LL_I2C_Enable (I2C_TypeDef * I2Cx)

Function description

Enable I2C peripheral (PE = 1).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PE LL_I2C_Enable

LL_I2C_Disable

Function name

__STATIC_INLINE void LL_I2C_Disable (I2C_TypeDef * I2Cx)

Function description

Disable I2C peripheral (PE = 0).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- When PE = 0, the I2C SCL and SDA lines are released. Internal state machines and status bits are put back to their reset value. When cleared, PE must be kept low for at least 3 APB clock cycles.

Reference Manual to LL API cross reference:

- CR1 PE LL_I2C_Disable

LL_I2C_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabled (I2C_TypeDef * I2Cx)

Function description

Check if the I2C peripheral is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 PE LL_I2C_IsEnabled

LL_I2C_ConfigFilters

Function name

__STATIC_INLINE void LL_I2C_ConfigFilters (I2C_TypeDef * I2Cx, uint32_t AnalogFilter, uint32_t DigitalFilter)

Function description

Configure Noise Filters (Analog and Digital).

Parameters

- **I2Cx:** I2C Instance.
- **AnalogFilter:** This parameter can be one of the following values:
  - LL_I2C_ANALOGFILTER_ENABLE
  - LL_I2C_ANALOGFILTER_DISABLE
- **DigitalFilter:** This parameter must be a value between Min_Data=0x00 (Digital filter disabled) and Max_Data=0x0F (Digital filter enabled and filtering capability up to 15*ti2cclk). This parameter is used to configure the digital noise filter on SDA and SCL input. The digital filter will filter spikes with a length of up to DNF[3:0]*ti2cclk.

Return values

- **None:**

Notes

- If the analog filter is also enabled, the digital filter is added to analog filter. The filters can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 ANFOFF LL_I2C_ConfigFilters
- CR1 DNF LL_I2C_ConfigFilters

LL_I2C_SetDigitalFilter

Function name

__STATIC_INLINE void LL_I2C_SetDigitalFilter (I2C_TypeDef * I2Cx, uint32_t DigitalFilter)

Function description

Configure Digital Noise Filter.

Parameters

- **I2Cx:** I2C Instance.
- **DigitalFilter:** This parameter must be a value between Min_Data=0x00 (Digital filter disabled) and Max_Data=0x0F (Digital filter enabled and filtering capability up to 15*ti2cclk). This parameter is used to configure the digital noise filter on SDA and SCL input. The digital filter will filter spikes with a length of up to DNF[3:0]*ti2cclk.

Return values

- **None:**

Notes

- If the analog filter is also enabled, the digital filter is added to analog filter. This filter can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 DNF LL_I2C_SetDigitalFilter

LL_I2C_GetDigitalFilter

Function name

__STATIC_INLINE uint32_t LL_I2C_GetDigitalFilter (I2C_TypeDef * I2Cx)

Function description

Get the current Digital Noise Filter configuration.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xF

Reference Manual to LL API cross reference:

- CR1 DNF LL_I2C_GetDigitalFilter

LL_I2C_EnableAnalogFilter

Function name

__STATIC_INLINE void LL_I2C_EnableAnalogFilter (I2C_TypeDef * I2Cx)

Function description

Enable Analog Noise Filter.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This filter can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 ANFOFF LL_I2C_EnableAnalogFilter

LL_I2C_DisableAnalogFilter

Function name

__STATIC_INLINE void LL_I2C_DisableAnalogFilter (I2C_TypeDef * I2Cx)

Function description

Disable Analog Noise Filter.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This filter can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 ANFOFF LL_I2C_DisableAnalogFilter

LL_I2C_IsEnabledAnalogFilter

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAnalogFilter (I2C_TypeDef * I2Cx)

Function description

Check if Analog Noise Filter is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ANFOFF LL_I2C_IsEnabledAnalogFilter

LL_I2C_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_I2C_EnableDMAReq_TX (I2C_TypeDef * I2Cx)

Function description

Enable DMA transmission requests.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXDMAEN LL_I2C_EnableDMAReq_TX

LL_I2C_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_I2C_DisableDMAReq_TX (I2C_TypeDef * I2Cx)

Function description

Disable DMA transmission requests.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXDMAEN LL_I2C_DisableDMAReq_TX

LL_I2C_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledDMAReq_TX (I2C_TypeDef * I2Cx)

Function description

Check if DMA transmission requests are enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TXDMAEN LL_I2C_IsEnabledDMAReq_TX

LL_I2C_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_I2C_EnableDMAReq_RX (I2C_TypeDef * I2Cx)

Function description

Enable DMA reception requests.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXDMAEN LL_I2C_EnableDMAReq_RX

LL_I2C_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_I2C_DisableDMAReq_RX (I2C_TypeDef * I2Cx)

Function description

Disable DMA reception requests.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXDMAEN LL_I2C_DisableDMAReq_RX

LL_I2C_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledDMAReq_RX (I2C_TypeDef * I2Cx)

Function description

Check if DMA reception requests are enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RXDMAEN LL_I2C_IsEnabledDMAReq_RX

LL_I2C_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_I2C_DMA_GetRegAddr (I2C_TypeDef * I2Cx, uint32_t Direction)

Function description

Get the data register address used for DMA transfer.

Parameters

- **I2Cx:** I2C Instance
- **Direction:** This parameter can be one of the following values:
  - LL_I2C_DMA_REG_DATA_TRANSMIT
  - LL_I2C_DMA_REG_DATA_RECEIVE

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- TXDR TXDATA LL_I2C_DMA_GetRegAddr
- RXDR RXDATA LL_I2C_DMA_GetRegAddr

LL_I2C_EnableClockStretching

Function name

__STATIC_INLINE void LL_I2C_EnableClockStretching (I2C_TypeDef * I2Cx)

Function description

Enable Clock stretching.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This bit can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 NOSTRETCH LL_I2C_EnableClockStretching

LL_I2C_DisableClockStretching

Function name

__STATIC_INLINE void LL_I2C_DisableClockStretching (I2C_TypeDef * I2Cx)

Function description

Disable Clock stretching.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This bit can only be programmed when the I2C is disabled (PE = 0).

Reference Manual to LL API cross reference:

- CR1 NOSTRETCH LL_I2C_DisableClockStretching

LL_I2C_IsEnabledClockStretching

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledClockStretching (I2C_TypeDef * I2Cx)

Function description

Check if Clock stretching is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 NOSTRETCH LL_I2C_IsEnabledClockStretching

LL_I2C_EnableSlaveByteControl

Function name

__STATIC_INLINE void LL_I2C_EnableSlaveByteControl (I2C_TypeDef * I2Cx)

Function description

Enable hardware byte control in slave mode.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SBC LL_I2C_EnableSlaveByteControl

LL_I2C_DisableSlaveByteControl

Function name

__STATIC_INLINE void LL_I2C_DisableSlaveByteControl (I2C_TypeDef * I2Cx)

Function description

Disable hardware byte control in slave mode.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SBC LL_I2C_DisableSlaveByteControl

LL_I2C_IsEnabledSlaveByteControl

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSlaveByteControl (I2C_TypeDef * I2Cx)

Function description

Check if hardware byte control in slave mode is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 SBC LL_I2C_IsEnabledSlaveByteControl

LL_I2C_EnableWakeUpFromStop

Function name

__STATIC_INLINE void LL_I2C_EnableWakeUpFromStop (I2C_TypeDef * I2Cx)

Function description

Enable Wakeup from STOP.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_I2C_WAKEUP_FROMSTOP_INSTANCE(I2Cx) can be used to check whether or not WakeUpFromStop feature is supported by the I2Cx Instance.
- This bit can only be programmed when Digital Filter is disabled.

Reference Manual to LL API cross reference:

- CR1 WUPEN LL_I2C_EnableWakeUpFromStop

LL_I2C_DisableWakeUpFromStop

Function name

__STATIC_INLINE void LL_I2C_DisableWakeUpFromStop (I2C_TypeDef * I2Cx)

Function description

Disable Wakeup from STOP.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_I2C_WAKEUP_FROMSTOP_INSTANCE(I2Cx) can be used to check whether or not WakeUpFromStop feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 WUPEN LL_I2C_DisableWakeUpFromStop

LL_I2C_IsEnabledWakeUpFromStop

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledWakeUpFromStop (I2C_TypeDef * I2Cx)

Function description

Check if Wakeup from STOP is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_I2C_WAKEUP_FROMSTOP_INSTANCE(I2Cx) can be used to check whether or not WakeUpFromStop feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 WUPEN LL_I2C_IsEnabledWakeUpFromStop

LL_I2C_EnableGeneralCall

Function name

__STATIC_INLINE void LL_I2C_EnableGeneralCall (I2C_TypeDef * I2Cx)

Function description

Enable General Call.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- When enabled the Address 0x00 is ACKed.

Reference Manual to LL API cross reference:

- CR1 GCEN LL_I2C_EnableGeneralCall

LL_I2C_DisableGeneralCall

Function name

__STATIC_INLINE void LL_I2C_DisableGeneralCall (I2C_TypeDef * I2Cx)

Function description

Disable General Call.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- When disabled the Address 0x00 is NACKed.

Reference Manual to LL API cross reference:

- CR1 GCEN LL_I2C_DisableGeneralCall

LL_I2C_IsEnabledGeneralCall

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledGeneralCall (I2C_TypeDef * I2Cx)

Function description

Check if General Call is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 GCEN LL_I2C_IsEnabledGeneralCall

LL_I2C_SetMasterAddressingMode

Function name

__STATIC_INLINE void LL_I2C_SetMasterAddressingMode (I2C_TypeDef * I2Cx, uint32_t AddressingMode)

Function description

Configure the Master to operate in 7-bit or 10-bit addressing mode.

Parameters

- **I2Cx:** I2C Instance.
- **AddressingMode:** This parameter can be one of the following values:
  - LL_I2C_ADDRESSING_MODE_7BIT
  - LL_I2C_ADDRESSING_MODE_10BIT

Return values

- **None:**

Notes

- Changing this bit is not allowed, when the START bit is set.

Reference Manual to LL API cross reference:

- CR2 ADD10 LL_I2C_SetMasterAddressingMode

LL_I2C_GetMasterAddressingMode

Function name

__STATIC_INLINE uint32_t LL_I2C_GetMasterAddressingMode (I2C_TypeDef * I2Cx)

Function description

Get the Master addressing mode.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_ADDRESSING_MODE_7BIT
  - LL_I2C_ADDRESSING_MODE_10BIT

Reference Manual to LL API cross reference:

- CR2 ADD10 LL_I2C_GetMasterAddressingMode

LL_I2C_SetOwnAddress1

Function name

__STATIC_INLINE void LL_I2C_SetOwnAddress1 (I2C_TypeDef * I2Cx, uint32_t OwnAddress1, uint32_t OwnAddrSize)

Function description

Set the Own Address1.

Parameters

- **I2Cx:** I2C Instance.
- **OwnAddress1:** This parameter must be a value between Min_Data=0 and Max_Data=0x3FF.
- **OwnAddrSize:** This parameter can be one of the following values:
  - LL_I2C_OWNADDRESS1_7BIT
  - LL_I2C_OWNADDRESS1_10BIT

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR1 OA1 LL_I2C_SetOwnAddress1
- OAR1 OA1MODE LL_I2C_SetOwnAddress1

LL_I2C_EnableOwnAddress1

Function name

__STATIC_INLINE void LL_I2C_EnableOwnAddress1 (I2C_TypeDef * I2Cx)

Function description

Enable acknowledge on Own Address1 match address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR1 OA1EN LL_I2C_EnableOwnAddress1

LL_I2C_DisableOwnAddress1

Function name

__STATIC_INLINE void LL_I2C_DisableOwnAddress1 (I2C_TypeDef * I2Cx)

Function description

Disable acknowledge on Own Address1 match address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR1 OA1EN LL_I2C_DisableOwnAddress1

LL_I2C_IsEnabledOwnAddress1

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledOwnAddress1 (I2C_TypeDef * I2Cx)

Function description

Check if Own Address1 acknowledge is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- OAR1 OA1EN LL_I2C_IsEnabledOwnAddress1

LL_I2C_SetOwnAddress2

Function name

__STATIC_INLINE void LL_I2C_SetOwnAddress2 (I2C_TypeDef * I2Cx, uint32_t OwnAddress2, uint32_t OwnAddrMask)

Function description

Set the 7bits Own Address2.

Parameters

- **I2Cx:** I2C Instance.
- **OwnAddress2:** Value between Min_Data=0 and Max_Data=0x7F.
- **OwnAddrMask:** This parameter can be one of the following values:
  - LL_I2C_OWNADDRESS2_NOMASK
  - LL_I2C_OWNADDRESS2_MASK01
  - LL_I2C_OWNADDRESS2_MASK02
  - LL_I2C_OWNADDRESS2_MASK03
  - LL_I2C_OWNADDRESS2_MASK04
  - LL_I2C_OWNADDRESS2_MASK05
  - LL_I2C_OWNADDRESS2_MASK06
  - LL_I2C_OWNADDRESS2_MASK07

Return values

- **None:**

Notes

- This action has no effect if own address2 is enabled.

Reference Manual to LL API cross reference:

- OAR2 OA2 LL_I2C_SetOwnAddress2
- OAR2 OA2MSK LL_I2C_SetOwnAddress2

LL_I2C_EnableOwnAddress2

Function name

__STATIC_INLINE void LL_I2C_EnableOwnAddress2 (I2C_TypeDef * I2Cx)

Function description

Enable acknowledge on Own Address2 match address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR2 OA2EN LL_I2C_EnableOwnAddress2

LL_I2C_DisableOwnAddress2

Function name

__STATIC_INLINE void LL_I2C_DisableOwnAddress2 (I2C_TypeDef * I2Cx)

Function description

Disable acknowledge on Own Address2 match address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- OAR2 OA2EN LL_I2C_DisableOwnAddress2

LL_I2C_IsEnabledOwnAddress2

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledOwnAddress2 (I2C_TypeDef * I2Cx)

Function description

Check if Own Address1 acknowledge is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- OAR2 OA2EN LL_I2C_IsEnabledOwnAddress2

LL_I2C_SetTiming

Function name

__STATIC_INLINE void LL_I2C_SetTiming (I2C_TypeDef * I2Cx, uint32_t Timing)

Function description

Configure the SDA setup, hold time and the SCL high, low period.

Parameters

- **I2Cx:** I2C Instance.
- **Timing:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFFFFFFF.

Return values

- **None:**

Notes

- This bit can only be programmed when the I2C is disabled (PE = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to LL API cross reference:

- TIMINGR TIMINGR LL_I2C_SetTiming

LL_I2C_GetTimingPrescaler

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTimingPrescaler (I2C_TypeDef * I2Cx)

Function description

Get the Timing Prescaler setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xF

Reference Manual to LL API cross reference:

- TIMINGR PRESC LL_I2C_GetTimingPrescaler

LL_I2C_GetClockLowPeriod

Function name

__STATIC_INLINE uint32_t LL_I2C_GetClockLowPeriod (I2C_TypeDef * I2Cx)

Function description

Get the SCL low period setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- TIMINGR SCLL LL_I2C_GetClockLowPeriod

LL_I2C_GetClockHighPeriod

Function name

__STATIC_INLINE uint32_t LL_I2C_GetClockHighPeriod (I2C_TypeDef * I2Cx)

Function description

Get the SCL high period setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- TIMINGR SCLH LL_I2C_GetClockHighPeriod

LL_I2C_GetDataHoldTime

Function name

__STATIC_INLINE uint32_t LL_I2C_GetDataHoldTime (I2C_TypeDef * I2Cx)

Function description

Get the SDA hold time.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xF

Reference Manual to LL API cross reference:

- TIMINGR SDADEL LL_I2C_GetDataHoldTime

LL_I2C_GetDataSetupTime

Function name

__STATIC_INLINE uint32_t LL_I2C_GetDataSetupTime (I2C_TypeDef * I2Cx)

Function description

Get the SDA setup time.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xF

Reference Manual to LL API cross reference:

- TIMINGR SCLDEL LL_I2C_GetDataSetupTime

LL_I2C_SetMode

Function name

__STATIC_INLINE void LL_I2C_SetMode (I2C_TypeDef * I2Cx, uint32_t PeripheralMode)

Function description

Configure peripheral mode.

Parameters

- **I2Cx:** I2C Instance.
- **PeripheralMode:** This parameter can be one of the following values:
  - LL_I2C_MODE_I2C
  - LL_I2C_MODE_SMBUS_HOST
  - LL_I2C_MODE_SMBUS_DEVICE
  - LL_I2C_MODE_SMBUS_DEVICE_ARP

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 SMBHEN LL_I2C_SetMode
- CR1 SMBDEN LL_I2C_SetMode

LL_I2C_GetMode

Function name

__STATIC_INLINE uint32_t LL_I2C_GetMode (I2C_TypeDef * I2Cx)

Function description

Get peripheral mode.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_MODE_I2C
  - LL_I2C_MODE_SMBUS_HOST
  - LL_I2C_MODE_SMBUS_DEVICE
  - LL_I2C_MODE_SMBUS_DEVICE_ARP

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 SMBHEN LL_I2C_GetMode
- CR1 SMBDEN LL_I2C_GetMode

LL_I2C_EnableSMBusAlert

Function name

__STATIC_INLINE void LL_I2C_EnableSMBusAlert (I2C_TypeDef * I2Cx)

Function description

Enable SMBus alert (Host or Device mode)

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- SMBus Device mode: SMBus Alert pin is drived low and Alert Response Address Header acknowledge is enabled. SMBus Host mode:SMBus Alert pin management is supported.

Reference Manual to LL API cross reference:

- CR1 ALERTEN LL_I2C_EnableSMBusAlert

LL_I2C_DisableSMBusAlert

Function name

__STATIC_INLINE void LL_I2C_DisableSMBusAlert (I2C_TypeDef * I2Cx)

Function description

Disable SMBus alert (Host or Device mode)

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- SMBus Device mode: SMBus Alert pin is not drived (can be used as a standard GPIO) and Alert Response Address Header acknowledge is disabled. SMBus Host mode:SMBus Alert pin management is not supported.

Reference Manual to LL API cross reference:

- CR1 ALERTEN LL_I2C_DisableSMBusAlert

LL_I2C_IsEnabledSMBusAlert

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSMBusAlert (I2C_TypeDef * I2Cx)

Function description

Check if SMBus alert (Host or Device mode) is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 ALERTEN LL_I2C_IsEnabledSMBusAlert

LL_I2C_EnableSMBusPEC

Function name

__STATIC_INLINE void LL_I2C_EnableSMBusPEC (I2C_TypeDef * I2Cx)

Function description

Enable SMBus Packet Error Calculation (PEC).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 PECEN LL_I2C_EnableSMBusPEC

LL_I2C_DisableSMBusPEC

Function name

__STATIC_INLINE void LL_I2C_DisableSMBusPEC (I2C_TypeDef * I2Cx)

Function description

Disable SMBus Packet Error Calculation (PEC).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 PECEN LL_I2C_DisableSMBusPEC

LL_I2C_IsEnabledSMBusPEC

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSMBusPEC (I2C_TypeDef * I2Cx)

Function description

Check if SMBus Packet Error Calculation (PEC) is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR1 PECEN LL_I2C_IsEnabledSMBusPEC

LL_I2C_ConfigSMBusTimeout

Function name

__STATIC_INLINE void LL_I2C_ConfigSMBusTimeout (I2C_TypeDef * I2Cx, uint32_t TimeoutA, uint32_t TimeoutAMode, uint32_t TimeoutB)

Function description

Configure the SMBus Clock Timeout.

Parameters

- **I2Cx:** I2C Instance.
- **TimeoutA:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFF.
- **TimeoutAMode:** This parameter can be one of the following values:
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SCL_LOW
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SDA_SCL_HIGH
- **TimeoutB:**

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- This configuration can only be programmed when associated Timeout is disabled (TimeoutA and/ orTimeoutB).

Reference Manual to LL API cross reference:

- TIMEOUTR TIDLE LL_I2C_ConfigSMBusTimeout
- TIMEOUTR TIMEOUTB LL_I2C_ConfigSMBusTimeout

LL_I2C_SetSMBusTimeoutA

Function name

__STATIC_INLINE void LL_I2C_SetSMBusTimeoutA (I2C_TypeDef * I2Cx, uint32_t TimeoutA)

Function description

Configure the SMBus Clock TimeoutA (SCL low timeout or SCL and SDA high timeout depends on TimeoutA mode).

Parameters

- **I2Cx:** I2C Instance.
- **TimeoutA:** This parameter must be a value between Min_Data=0 and Max_Data=0xFFF.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- These bits can only be programmed when TimeoutA is disabled.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMEOUTA LL_I2C_SetSMBusTimeoutA

LL_I2C_GetSMBusTimeoutA

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSMBusTimeoutA (I2C_TypeDef * I2Cx)

Function description

Get the SMBus Clock TimeoutA setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFFF

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMEOUTA LL_I2C_GetSMBusTimeoutA

LL_I2C_SetSMBusTimeoutAMode

Function name

__STATIC_INLINE void LL_I2C_SetSMBusTimeoutAMode (I2C_TypeDef * I2Cx, uint32_t TimeoutAMode)

Function description

Set the SMBus Clock TimeoutA mode.

Parameters

- **I2Cx:** I2C Instance.
- **TimeoutAMode:** This parameter can be one of the following values:
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SCL_LOW
  - LL_I2C_SMBUS_TIMEOUTA_MODE_SDA_SCL_HIGH

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- This bit can only be programmed when TimeoutA is disabled.

LL_I2C_GetSMBusTimeoutB

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSMBusTimeoutB (I2C_TypeDef * I2Cx)

Function description

Get the SMBus Extended Cumulative Clock TimeoutB setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0 and Max_Data=0xFFF

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- TIMEOUTR TIMEOUTB LL_I2C_GetSMBusTimeoutB

LL_I2C_EnableSMBusTimeout

Function name

__STATIC_INLINE void LL_I2C_EnableSMBusTimeout (I2C_TypeDef * I2Cx, uint32_t ClockTimeout)

Function description

Enable the SMBus Clock Timeout.

Parameters

- **I2Cx:** I2C Instance.
- **ClockTimeout:** This parameter can be one of the following values:
  - LL_I2C_SMBUS_TIMEOUTA
  - LL_I2C_SMBUS_TIMEOUTB
  - LL_I2C_SMBUS_ALL_TIMEOUT

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

LL_I2C_EnableIT_TX

Function name

__STATIC_INLINE void LL_I2C_EnableIT_TX (I2C_TypeDef * I2Cx)

Function description

Enable TXIS interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXIE LL_I2C_EnableIT_TX

LL_I2C_DisableIT_TX

Function name

__STATIC_INLINE void LL_I2C_DisableIT_TX (I2C_TypeDef * I2Cx)

Function description

Disable TXIS interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXIE LL_I2C_DisableIT_TX

LL_I2C_IsEnabledIT_TX

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_TX (I2C_TypeDef * I2Cx)

Function description

Check if the TXIS Interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TXIE LL_I2C_IsEnabledIT_TX

LL_I2C_EnableIT_RX

Function name

__STATIC_INLINE void LL_I2C_EnableIT_RX (I2C_TypeDef * I2Cx)

Function description

Enable RXNE interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXIE LL_I2C_EnableIT_RX

LL_I2C_DisableIT_RX

Function name

__STATIC_INLINE void LL_I2C_DisableIT_RX (I2C_TypeDef * I2Cx)

Function description

Disable RXNE interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXIE LL_I2C_DisableIT_RX

LL_I2C_IsEnabledIT_RX

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_RX (I2C_TypeDef * I2Cx)

Function description

Check if the RXNE Interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RXIE LL_I2C_IsEnabledIT_RX

LL_I2C_EnableIT_ADDR

Function name

__STATIC_INLINE void LL_I2C_EnableIT_ADDR (I2C_TypeDef * I2Cx)

Function description

Enable Address match interrupt (slave mode only).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ADDRIE LL_I2C_EnableIT_ADDR

LL_I2C_DisableIT_ADDR

Function name

__STATIC_INLINE void LL_I2C_DisableIT_ADDR (I2C_TypeDef * I2Cx)

Function description

Disable Address match interrupt (slave mode only).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ADDRIE LL_I2C_DisableIT_ADDR

LL_I2C_IsEnabledIT_ADDR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_ADDR (I2C_TypeDef * I2Cx)

Function description

Check if Address match interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ADDRIE LL_I2C_IsEnabledIT_ADDR

LL_I2C_EnableIT_NACK

Function name

__STATIC_INLINE void LL_I2C_EnableIT_NACK (I2C_TypeDef * I2Cx)

Function description

Enable Not acknowledge received interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 NACKIE LL_I2C_EnableIT_NACK

LL_I2C_DisableIT_NACK

Function name

__STATIC_INLINE void LL_I2C_DisableIT_NACK (I2C_TypeDef * I2Cx)

Function description

Disable Not acknowledge received interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 NACKIE LL_I2C_DisableIT_NACK

LL_I2C_IsEnabledIT_NACK

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_NACK (I2C_TypeDef * I2Cx)

Function description

Check if Not acknowledge received interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 NACKIE LL_I2C_IsEnabledIT_NACK

LL_I2C_EnableIT_STOP

Function name

__STATIC_INLINE void LL_I2C_EnableIT_STOP (I2C_TypeDef * I2Cx)

Function description

Enable STOP detection interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 STOPIE LL_I2C_EnableIT_STOP

LL_I2C_DisableIT_STOP

Function name

__STATIC_INLINE void LL_I2C_DisableIT_STOP (I2C_TypeDef * I2Cx)

Function description

Disable STOP detection interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 STOPIE LL_I2C_DisableIT_STOP

LL_I2C_IsEnabledIT_STOP

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_STOP (I2C_TypeDef * I2Cx)

Function description

Check if STOP detection interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 STOPIE LL_I2C_IsEnabledIT_STOP

LL_I2C_EnableIT_TC

Function name

__STATIC_INLINE void LL_I2C_EnableIT_TC (I2C_TypeDef * I2Cx)

Function description

Enable Transfer Complete interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Any of these events will generate interrupt : Transfer Complete (TC) Transfer Complete Reload (TCR)

Reference Manual to LL API cross reference:

- CR1 TCIE LL_I2C_EnableIT_TC

LL_I2C_DisableIT_TC

Function name

__STATIC_INLINE void LL_I2C_DisableIT_TC (I2C_TypeDef * I2Cx)

Function description

Disable Transfer Complete interrupt.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Any of these events will generate interrupt : Transfer Complete (TC) Transfer Complete Reload (TCR)

Reference Manual to LL API cross reference:

- CR1 TCIE LL_I2C_DisableIT_TC

LL_I2C_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_TC (I2C_TypeDef * I2Cx)

Function description

Check if Transfer Complete interrupt is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TCIE LL_I2C_IsEnabledIT_TC

LL_I2C_EnableIT_ERR

Function name

__STATIC_INLINE void LL_I2C_EnableIT_ERR (I2C_TypeDef * I2Cx)

Function description

Enable Error interrupts.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- Any of these errors will generate interrupt : Arbitration Loss (ARLO) Bus Error detection (BERR) Overrun/ Underrun (OVR) SMBus Timeout detection (TIMEOUT) SMBus PEC error detection (PECERR) SMBus Alert pin event detection (ALERT)

Reference Manual to LL API cross reference:

- CR1 ERRIE LL_I2C_EnableIT_ERR

LL_I2C_DisableIT_ERR

Function name

__STATIC_INLINE void LL_I2C_DisableIT_ERR (I2C_TypeDef * I2Cx)

Function description

Disable Error interrupts.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- Any of these errors will generate interrupt : Arbitration Loss (ARLO) Bus Error detection (BERR) Overrun/ Underrun (OVR) SMBus Timeout detection (TIMEOUT) SMBus PEC error detection (PECERR) SMBus Alert pin event detection (ALERT)

Reference Manual to LL API cross reference:

LL_I2C_IsEnabledIT_ERR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledIT_ERR (I2C_TypeDef * I2Cx)

Function description

Check if Error interrupts are enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ERRIE LL_I2C_IsEnabledIT_ERR

LL_I2C_IsActiveFlag_TXE

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TXE (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transmit data register empty flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: When next data is written in Transmit data register. SET: When Transmit data register is empty.

Reference Manual to LL API cross reference:

- ISR TXE LL_I2C_IsActiveFlag_TXE

LL_I2C_IsActiveFlag_TXIS

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TXIS (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transmit interrupt flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: When next data is written in Transmit data register. SET: When Transmit data register is empty.

Reference Manual to LL API cross reference:

- ISR TXIS LL_I2C_IsActiveFlag_TXIS

LL_I2C_IsActiveFlag_RXNE

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_RXNE (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Receive data register not empty flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: When Receive data register is read. SET: When the received data is copied in Receive data register.

Reference Manual to LL API cross reference:

- ISR RXNE LL_I2C_IsActiveFlag_RXNE

LL_I2C_IsActiveFlag_ADDR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_ADDR (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Address matched flag (slave mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When the received slave address matched with one of the enabled slave address.

Reference Manual to LL API cross reference:

- ISR ADDR LL_I2C_IsActiveFlag_ADDR

LL_I2C_IsActiveFlag_NACK

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_NACK (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Not Acknowledge received flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a NACK is received after a byte transmission.

Reference Manual to LL API cross reference:

- ISR NACKF LL_I2C_IsActiveFlag_NACK

LL_I2C_IsActiveFlag_STOP

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_STOP (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Stop detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a Stop condition is detected.

Reference Manual to LL API cross reference:

- ISR STOPF LL_I2C_IsActiveFlag_STOP

LL_I2C_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TC (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transfer complete flag (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When RELOAD=0, AUTOEND=0 and NBYTES date have been transferred.

Reference Manual to LL API cross reference:

- ISR TC LL_I2C_IsActiveFlag_TC

LL_I2C_IsActiveFlag_TCR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_TCR (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Transfer complete flag (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When RELOAD=1 and NBYTES date have been transferred.

Reference Manual to LL API cross reference:

- ISR TCR LL_I2C_IsActiveFlag_TCR

LL_I2C_IsActiveFlag_BERR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_BERR (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Bus error flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a misplaced Start or Stop condition is detected.

Reference Manual to LL API cross reference:

- ISR BERR LL_I2C_IsActiveFlag_BERR

LL_I2C_IsActiveFlag_ARLO

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_ARLO (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Arbitration lost flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When arbitration lost.

Reference Manual to LL API cross reference:

- ISR ARLO LL_I2C_IsActiveFlag_ARLO

LL_I2C_IsActiveFlag_OVR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_OVR (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Overrun/Underrun flag (slave mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When an overrun/underrun error occurs (Clock Stretching Disabled).

Reference Manual to LL API cross reference:

- ISR OVR LL_I2C_IsActiveFlag_OVR

LL_I2C_IsActiveSMBusFlag_PECERR

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveSMBusFlag_PECERR (I2C_TypeDef * I2Cx)

Function description

Indicate the status of SMBus PEC error flag in reception.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- RESET: Clear default value. SET: When the received PEC does not match with the PEC register content.

Reference Manual to LL API cross reference:

- ISR PECERR LL_I2C_IsActiveSMBusFlag_PECERR

LL_I2C_IsActiveSMBusFlag_TIMEOUT

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveSMBusFlag_TIMEOUT (I2C_TypeDef * I2Cx)

Function description

Indicate the status of SMBus Timeout detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- RESET: Clear default value. SET: When a timeout or extended clock timeout occurs.

Reference Manual to LL API cross reference:

- ISR TIMEOUT LL_I2C_IsActiveSMBusFlag_TIMEOUT

LL_I2C_IsActiveSMBusFlag_ALERT

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveSMBusFlag_ALERT (I2C_TypeDef * I2Cx)

Function description

Indicate the status of SMBus alert flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- RESET: Clear default value. SET: When SMBus host configuration, SMBus alert enabled and a falling edge event occurs on SMBA pin.

Reference Manual to LL API cross reference:

- ISR ALERT LL_I2C_IsActiveSMBusFlag_ALERT

LL_I2C_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_I2C_IsActiveFlag_BUSY (I2C_TypeDef * I2Cx)

Function description

Indicate the status of Bus Busy flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- RESET: Clear default value. SET: When a Start condition is detected.

Reference Manual to LL API cross reference:

- ISR BUSY LL_I2C_IsActiveFlag_BUSY

LL_I2C_ClearFlag_ADDR

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_ADDR (I2C_TypeDef * I2Cx)

Function description

Clear Address Matched flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ADDRCF LL_I2C_ClearFlag_ADDR

LL_I2C_ClearFlag_NACK

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_NACK (I2C_TypeDef * I2Cx)

Function description

Clear Not Acknowledge flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR NACKCF LL_I2C_ClearFlag_NACK

LL_I2C_ClearFlag_STOP

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_STOP (I2C_TypeDef * I2Cx)

Function description

Clear Stop detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR STOPCF LL_I2C_ClearFlag_STOP

LL_I2C_ClearFlag_TXE

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_TXE (I2C_TypeDef * I2Cx)

Function description

Clear Transmit data register empty flag (TXE).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- This bit can be clear by software in order to flush the transmit data register (TXDR).

Reference Manual to LL API cross reference:

- ISR TXE LL_I2C_ClearFlag_TXE

LL_I2C_ClearFlag_BERR

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_BERR (I2C_TypeDef * I2Cx)

Function description

Clear Bus error flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR BERRCF LL_I2C_ClearFlag_BERR

LL_I2C_ClearFlag_ARLO

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_ARLO (I2C_TypeDef * I2Cx)

Function description

Clear Arbitration lost flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ARLOCF LL_I2C_ClearFlag_ARLO

LL_I2C_ClearFlag_OVR

Function name

__STATIC_INLINE void LL_I2C_ClearFlag_OVR (I2C_TypeDef * I2Cx)

Function description

Clear Overrun/Underrun flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR OVRCF LL_I2C_ClearFlag_OVR

LL_I2C_ClearSMBusFlag_PECERR

Function name

__STATIC_INLINE void LL_I2C_ClearSMBusFlag_PECERR (I2C_TypeDef * I2Cx)

Function description

Clear SMBus PEC error flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- ICR PECCF LL_I2C_ClearSMBusFlag_PECERR

LL_I2C_ClearSMBusFlag_TIMEOUT

Function name

__STATIC_INLINE void LL_I2C_ClearSMBusFlag_TIMEOUT (I2C_TypeDef * I2Cx)

Function description

Clear SMBus Timeout detection flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- ICR TIMOUTCF LL_I2C_ClearSMBusFlag_TIMEOUT

LL_I2C_ClearSMBusFlag_ALERT

Function name

__STATIC_INLINE void LL_I2C_ClearSMBusFlag_ALERT (I2C_TypeDef * I2Cx)

Function description

Clear SMBus Alert flag.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- ICR ALERTCF LL_I2C_ClearSMBusFlag_ALERT

LL_I2C_EnableAutoEndMode

Function name

__STATIC_INLINE void LL_I2C_EnableAutoEndMode (I2C_TypeDef * I2Cx)

Function description

Enable automatic STOP condition generation (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Automatic end mode : a STOP condition is automatically sent when NBYTES data are transferred. This bit has no effect in slave mode or when RELOAD bit is set.

Reference Manual to LL API cross reference:

- CR2 AUTOEND LL_I2C_EnableAutoEndMode

LL_I2C_DisableAutoEndMode

Function name

__STATIC_INLINE void LL_I2C_DisableAutoEndMode (I2C_TypeDef * I2Cx)

Function description

Disable automatic STOP condition generation (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- Software end mode : TC flag is set when NBYTES data are transferre, stretching SCL low.

Reference Manual to LL API cross reference:

- CR2 AUTOEND LL_I2C_DisableAutoEndMode

LL_I2C_IsEnabledAutoEndMode

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAutoEndMode (I2C_TypeDef * I2Cx)

Function description

Check if automatic STOP condition is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 AUTOEND LL_I2C_IsEnabledAutoEndMode

LL_I2C_EnableReloadMode

Function name

__STATIC_INLINE void LL_I2C_EnableReloadMode (I2C_TypeDef * I2Cx)

Function description

Enable reload mode (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The transfer is not completed after the NBYTES data transfer, NBYTES will be reloaded when TCR flag is set.

Reference Manual to LL API cross reference:

- CR2 RELOAD LL_I2C_EnableReloadMode

LL_I2C_DisableReloadMode

Function name

__STATIC_INLINE void LL_I2C_DisableReloadMode (I2C_TypeDef * I2Cx)

Function description

Disable reload mode (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The transfer is completed after the NBYTES data transfer(STOP or RESTART will follow).

Reference Manual to LL API cross reference:

- CR2 RELOAD LL_I2C_DisableReloadMode

LL_I2C_IsEnabledReloadMode

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledReloadMode (I2C_TypeDef * I2Cx)

Function description

Check if reload mode is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 RELOAD LL_I2C_IsEnabledReloadMode

LL_I2C_SetTransferSize

Function name

__STATIC_INLINE void LL_I2C_SetTransferSize (I2C_TypeDef * I2Cx, uint32_t TransferSize)

Function description

Configure the number of bytes for transfer.

Parameters

- **I2Cx:** I2C Instance.
- **TransferSize:** This parameter must be a value between Min_Data=0x00 and Max_Data=0xFF.

Return values

- **None:**

Notes

- Changing these bits when START bit is set is not allowed.

Reference Manual to LL API cross reference:

- CR2 NBYTES LL_I2C_SetTransferSize

LL_I2C_GetTransferSize

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTransferSize (I2C_TypeDef * I2Cx)

Function description

Get the number of bytes configured for transfer.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- CR2 NBYTES LL_I2C_GetTransferSize

LL_I2C_AcknowledgeNextData

Function name

__STATIC_INLINE void LL_I2C_AcknowledgeNextData (I2C_TypeDef * I2Cx, uint32_t TypeAcknowledge)

Function description

Prepare the generation of a ACKnowledge or Non ACKnowledge condition after the address receive match code or next received byte.

Parameters

- **I2Cx:** I2C Instance.
- **TypeAcknowledge:** This parameter can be one of the following values:
  - LL_I2C_ACK
  - LL_I2C_NACK

Return values

- **None:**

Notes

- Usage in Slave mode only.

Reference Manual to LL API cross reference:

- CR2 NACK LL_I2C_AcknowledgeNextData

LL_I2C_GenerateStartCondition

Function name

__STATIC_INLINE void LL_I2C_GenerateStartCondition (I2C_TypeDef * I2Cx)

Function description

Generate a START or RESTART condition.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The START bit can be set even if bus is BUSY or I2C is in slave mode. This action has no effect when RELOAD is set.

Reference Manual to LL API cross reference:

- CR2 START LL_I2C_GenerateStartCondition

LL_I2C_GenerateStopCondition

Function name

__STATIC_INLINE void LL_I2C_GenerateStopCondition (I2C_TypeDef * I2Cx)

Function description

Generate a STOP condition after the current byte transfer (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 STOP LL_I2C_GenerateStopCondition

LL_I2C_EnableAuto10BitRead

Function name

__STATIC_INLINE void LL_I2C_EnableAuto10BitRead (I2C_TypeDef * I2Cx)

Function description

Enable automatic RESTART Read request condition for 10bit address header (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The master sends the complete 10bit slave address read sequence : Start + 2 bytes 10bit address in Write direction + Restart + first 7 bits of 10bit address in Read direction.

Reference Manual to LL API cross reference:

- CR2 HEAD10R LL_I2C_EnableAuto10BitRead

LL_I2C_DisableAuto10BitRead

Function name

__STATIC_INLINE void LL_I2C_DisableAuto10BitRead (I2C_TypeDef * I2Cx)

Function description

Disable automatic RESTART Read request condition for 10bit address header (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The master only sends the first 7 bits of 10bit address in Read direction.

Reference Manual to LL API cross reference:

- CR2 HEAD10R LL_I2C_DisableAuto10BitRead

LL_I2C_IsEnabledAuto10BitRead

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledAuto10BitRead (I2C_TypeDef * I2Cx)

Function description

Check if automatic RESTART Read request condition for 10bit address header is enabled or disabled.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 HEAD10R LL_I2C_IsEnabledAuto10BitRead

LL_I2C_SetTransferRequest

Function name

__STATIC_INLINE void LL_I2C_SetTransferRequest (I2C_TypeDef * I2Cx, uint32_t TransferRequest)

Function description

Configure the transfer direction (master mode).

Parameters

- **I2Cx:** I2C Instance.
- **TransferRequest:** This parameter can be one of the following values:
  - LL_I2C_REQUEST_WRITE
  - LL_I2C_REQUEST_READ

Return values

- **None:**

Notes

- Changing these bits when START bit is set is not allowed.

Reference Manual to LL API cross reference:

- CR2 RD_WRN LL_I2C_SetTransferRequest

LL_I2C_GetTransferRequest

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTransferRequest (I2C_TypeDef * I2Cx)

Function description

Get the transfer direction requested (master mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_REQUEST_WRITE
  - LL_I2C_REQUEST_READ

Reference Manual to LL API cross reference:

- CR2 RD_WRN LL_I2C_GetTransferRequest

LL_I2C_SetSlaveAddr

Function name

__STATIC_INLINE void LL_I2C_SetSlaveAddr (I2C_TypeDef * I2Cx, uint32_t SlaveAddr)

Function description

Configure the slave address for transfer (master mode).

Parameters

- **I2Cx:** I2C Instance.
- **SlaveAddr:** This parameter must be a value between Min_Data=0x00 and Max_Data=0x3F.

Return values

- **None:**

Notes

- Changing these bits when START bit is set is not allowed.

Reference Manual to LL API cross reference:

- CR2 SADD LL_I2C_SetSlaveAddr

LL_I2C_GetSlaveAddr

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSlaveAddr (I2C_TypeDef * I2Cx)

Function description

Get the slave address programmed for transfer.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x0 and Max_Data=0x3F

Reference Manual to LL API cross reference:

- CR2 SADD LL_I2C_GetSlaveAddr

LL_I2C_HandleTransfer

Function name

__STATIC_INLINE void LL_I2C_HandleTransfer (I2C_TypeDef * I2Cx, uint32_t SlaveAddr, uint32_t SlaveAddrSize, uint32_t TransferSize, uint32_t EndMode, uint32_t Request)

Function description

Handles I2Cx communication when starting transfer or during transfer (TC or TCR flag are set).

Parameters

- **I2Cx:** I2C Instance.
- **SlaveAddr:** Specifies the slave address to be programmed.
- **SlaveAddrSize:** This parameter can be one of the following values:
  - LL_I2C_ADDRSLAVE_7BIT
  - LL_I2C_ADDRSLAVE_10BIT
- **TransferSize:** Specifies the number of bytes to be programmed. This parameter must be a value between Min_Data=0 and Max_Data=255.
- **EndMode:** This parameter can be one of the following values:
  - LL_I2C_MODE_RELOAD
  - LL_I2C_MODE_AUTOEND
  - LL_I2C_MODE_SOFTEND
  - LL_I2C_MODE_SMBUS_RELOAD
  - LL_I2C_MODE_SMBUS_AUTOEND_NO_PEC
  - LL_I2C_MODE_SMBUS_SOFTEND_NO_PEC
  - LL_I2C_MODE_SMBUS_AUTOEND_WITH_PEC
  - LL_I2C_MODE_SMBUS_SOFTEND_WITH_PEC
- **Request:** This parameter can be one of the following values:
  - LL_I2C_GENERATE_NOSTARTSTOP
  - LL_I2C_GENERATE_STOP
  - LL_I2C_GENERATE_START_READ
  - LL_I2C_GENERATE_START_WRITE
  - LL_I2C_GENERATE_RESTART_7BIT_READ
  - LL_I2C_GENERATE_RESTART_7BIT_WRITE
  - LL_I2C_GENERATE_RESTART_10BIT_READ
  - LL_I2C_GENERATE_RESTART_10BIT_WRITE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SADD LL_I2C_HandleTransfer
- CR2 ADD10 LL_I2C_HandleTransfer
- CR2 RD_WRN LL_I2C_HandleTransfer
- CR2 START LL_I2C_HandleTransfer
- CR2 STOP LL_I2C_HandleTransfer
- CR2 RELOAD LL_I2C_HandleTransfer
- CR2 NBYTES LL_I2C_HandleTransfer
- CR2 AUTOEND LL_I2C_HandleTransfer
- CR2 HEAD10R LL_I2C_HandleTransfer

LL_I2C_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_I2C_GetTransferDirection (I2C_TypeDef * I2Cx)

Function description

Indicate the value of transfer direction (slave mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Returned:** value can be one of the following values:
  - LL_I2C_DIRECTION_WRITE
  - LL_I2C_DIRECTION_READ

Notes

- RESET: Write transfer, Slave enters in receiver mode. SET: Read transfer, Slave enters in transmitter mode.

Reference Manual to LL API cross reference:

- ISR DIR LL_I2C_GetTransferDirection

LL_I2C_GetAddressMatchCode

Function name

__STATIC_INLINE uint32_t LL_I2C_GetAddressMatchCode (I2C_TypeDef * I2Cx)

Function description

Return the slave matched address.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x3F

Reference Manual to LL API cross reference:

- ISR ADDCODE LL_I2C_GetAddressMatchCode

LL_I2C_EnableSMBusPECCompare

Function name

__STATIC_INLINE void LL_I2C_EnableSMBusPECCompare (I2C_TypeDef * I2Cx)

Function description

Enable internal comparison of the SMBus Packet Error byte (transmission or reception mode).

Parameters

- **I2Cx:** I2C Instance.

Return values

- **None:**

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.
- This feature is cleared by hardware when the PEC byte is transferred, or when a STOP condition or an Address Matched is received. This bit has no effect when RELOAD bit is set. This bit has no effect in device mode when SBC bit is not set.

Reference Manual to LL API cross reference:

- CR2 PECBYTE LL_I2C_EnableSMBusPECCompare

LL_I2C_IsEnabledSMBusPECCompare

Function name

__STATIC_INLINE uint32_t LL_I2C_IsEnabledSMBusPECCompare (I2C_TypeDef * I2Cx)

Function description

Check if the SMBus Packet Error byte internal comparison is requested or not.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- CR2 PECBYTE LL_I2C_IsEnabledSMBusPECCompare

LL_I2C_GetSMBusPEC

Function name

__STATIC_INLINE uint32_t LL_I2C_GetSMBusPEC (I2C_TypeDef * I2Cx)

Function description

Get the SMBus Packet Error byte calculated.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Notes

- The macro IS_SMBUS_ALL_INSTANCE(I2Cx) can be used to check whether or not SMBus feature is supported by the I2Cx Instance.

Reference Manual to LL API cross reference:

- PECR PEC LL_I2C_GetSMBusPEC

LL_I2C_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_I2C_ReceiveData8 (I2C_TypeDef * I2Cx)

Function description

Read Receive Data register.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RXDR RXDATA LL_I2C_ReceiveData8

LL_I2C_TransmitData8

Function name

__STATIC_INLINE void LL_I2C_TransmitData8 (I2C_TypeDef * I2Cx, uint8_t Data)

Function description

Write in Transmit Data Register .

Parameters

- **I2Cx:** I2C Instance.
- **Data:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR TXDATA LL_I2C_TransmitData8

LL_I2C_Init

Function name

ErrorStatus LL_I2C_Init (I2C_TypeDef * I2Cx, LL_I2C_InitTypeDef * I2C_InitStruct)

Function description

Initialize the I2C registers according to the specified parameters in I2C_InitStruct.

Parameters

- **I2Cx:** I2C Instance.
- **I2C_InitStruct:** pointer to a LL_I2C_InitTypeDef structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: I2C registers are initialized
  - ERROR: Not applicable

LL_I2C_DeInit

Function name

ErrorStatus LL_I2C_DeInit (I2C_TypeDef * I2Cx)

Function description

De-initialize the I2C registers to their default reset values.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: I2C registers are de-initialized
  - ERROR: I2C registers are not de-initialized

LL_I2C_StructInit

Function name

void LL_I2C_StructInit (LL_I2C_InitTypeDef * I2C_InitStruct)

Function description

Set each LL_I2C_InitTypeDef field to default value.

Parameters

- **I2C_InitStruct:** Pointer to a LL_I2C_InitTypeDef structure.

Return values

- **None:**

113.3 I2C Firmware driver defines

The following section lists the various define and macros of the module.

113.3.1 I2C

I2C

Master Addressing Mode

LL_I2C_ADDRESSING_MODE_7BIT

Master operates in 7-bit addressing mode.

LL_I2C_ADDRESSING_MODE_10BIT

Master operates in 10-bit addressing mode.

Slave Address Length

LL_I2C_ADDRSLAVE_7BIT

Slave Address in 7-bit.

LL_I2C_ADDRSLAVE_10BIT

Slave Address in 10-bit.

Analog Filter Selection

LL_I2C_ANALOGFILTER_ENABLE

Analog filter is enabled.

LL_I2C_ANALOGFILTER_DISABLE

Analog filter is disabled.

Clear Flags Defines

LL_I2C_ICR_ADDRCF

Address Matched flag

LL_I2C_ICR_NACKCF

Not Acknowledge flag

LL_I2C_ICR_STOPCF

Stop detection flag

LL_I2C_ICR_BERRCF

Bus error flag

LL_I2C_ICR_ARLOCF

Arbitration Lost flag

LL_I2C_ICR_OVRCF

Overrun/Underrun flag

LL_I2C_ICR_PECCF

PEC error flag

LL_I2C_ICR_TIMOUTCF

Timeout detection flag

LL_I2C_ICR_ALERTCF

Alert flag

Read Write Direction

LL_I2C_DIRECTION_WRITE

Write transfer request by master, slave enters receiver mode.

LL_I2C_DIRECTION_READ

Read transfer request by master, slave enters transmitter mode.

DMA Register Data

LL_I2C_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_I2C_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

Start And Stop Generation

LL_I2C_GENERATE_NOSTARTSTOP

Don't Generate Stop and Start condition.

LL_I2C_GENERATE_STOP

Generate Stop condition (Size should be set to 0).

LL_I2C_GENERATE_START_READ

Generate Start for read request.

LL_I2C_GENERATE_START_WRITE

Generate Start for write request.

LL_I2C_GENERATE_RESTART_7BIT_READ

Generate Restart for read request, slave 7Bit address.

LL_I2C_GENERATE_RESTART_7BIT_WRITE

Generate Restart for write request, slave 7Bit address.

LL_I2C_GENERATE_RESTART_10BIT_READ

Generate Restart for read request, slave 10Bit address.

LL_I2C_GENERATE_RESTART_10BIT_WRITE

Generate Restart for write request, slave 10Bit address.

Get Flags Defines

LL_I2C_ISR_TXE

Transmit data register empty

LL_I2C_ISR_TXIS

Transmit interrupt status

LL_I2C_ISR_RXNE

Receive data register not empty

LL_I2C_ISR_ADDR

Address matched (slave mode)

LL_I2C_ISR_NACKF

Not Acknowledge received flag

LL_I2C_ISR_STOPF

Stop detection flag

LL_I2C_ISR_TC

Transfer Complete (master mode)

LL_I2C_ISR_TCR

Transfer Complete Reload

LL_I2C_ISR_BERR

Bus error

LL_I2C_ISR_ARLO

Arbitration lost

LL_I2C_ISR_OVR

Overrun/Underrun (slave mode)

LL_I2C_ISR_PECERR

PEC Error in reception (SMBus mode)

LL_I2C_ISR_TIMEOUT

Timeout detection flag (SMBus mode)

LL_I2C_ISR_ALERT

SMBus alert (SMBus mode)

LL_I2C_ISR_BUSY

Bus busy

Acknowledge Generation

LL_I2C_ACK

ACK is sent after current received byte.

LL_I2C_NACK

NACK is sent after current received byte.

IT Defines

LL_I2C_CR1_TXIE

TX Interrupt enable

LL_I2C_CR1_RXIE

RX Interrupt enable

LL_I2C_CR1_ADDRIE

Address match Interrupt enable (slave only)

LL_I2C_CR1_NACKIE

Not acknowledge received Interrupt enable

LL_I2C_CR1_STOPIE

STOP detection Interrupt enable

LL_I2C_CR1_TCIE

Transfer Complete interrupt enable

LL_I2C_CR1_ERRIE

Error interrupts enable

Transfer End Mode

LL_I2C_MODE_RELOAD

Enable I2C Reload mode.

LL_I2C_MODE_AUTOEND

Enable I2C Automatic end mode with no HW PEC comparison.

LL_I2C_MODE_SOFTEND

Enable I2C Software end mode with no HW PEC comparison.

LL_I2C_MODE_SMBUS_RELOAD

Enable SMBUS Automatic end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_AUTOEND_NO_PEC

Enable SMBUS Automatic end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_SOFTEND_NO_PEC

Enable SMBUS Software end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_AUTOEND_WITH_PEC

Enable SMBUS Automatic end mode with HW PEC comparison.

LL_I2C_MODE_SMBUS_SOFTEND_WITH_PEC

Enable SMBUS Software end mode with HW PEC comparison.

Own Address 1 Length

LL_I2C_OWNADDRESS1_7BIT

Own address 1 is a 7-bit address.

LL_I2C_OWNADDRESS1_10BIT

Own address 1 is a 10-bit address.

Own Address 2 Masks

LL_I2C_OWNADDRESS2_NOMASK

Own Address2 No mask.

LL_I2C_OWNADDRESS2_MASK01

Only Address2 bits[7:2] are compared.

LL_I2C_OWNADDRESS2_MASK02

Only Address2 bits[7:3] are compared.

LL_I2C_OWNADDRESS2_MASK03

Only Address2 bits[7:4] are compared.

LL_I2C_OWNADDRESS2_MASK04

Only Address2 bits[7:5] are compared.

LL_I2C_OWNADDRESS2_MASK05

Only Address2 bits[7:6] are compared.

LL_I2C_OWNADDRESS2_MASK06

Only Address2 bits[7] are compared.

LL_I2C_OWNADDRESS2_MASK07

No comparison is done. All Address2 are acknowledged.

Peripheral Mode

LL_I2C_MODE_I2C

I2C Master or Slave mode

LL_I2C_MODE_SMBUS_HOST

SMBus Host address acknowledge

LL_I2C_MODE_SMBUS_DEVICE

SMBus Device default mode (Default address not acknowledge)

LL_I2C_MODE_SMBUS_DEVICE_ARP

SMBus Device Default address acknowledge

Transfer Request Direction

LL_I2C_REQUEST_WRITE

Master request a write transfer.

LL_I2C_REQUEST_READ

Master request a read transfer.

SMBus TimeoutA Mode SCL SDA Timeout

LL_I2C_SMBUS_TIMEOUTA_MODE_SCL_LOW

TimeoutA is used to detect SCL low level timeout.

LL_I2C_SMBUS_TIMEOUTA_MODE_SDA_SCL_HIGH

TimeoutA is used to detect both SCL and SDA high level timeout.

SMBus Timeout Selection

LL_I2C_SMBUS_TIMEOUTA

TimeoutA enable bit

LL_I2C_SMBUS_TIMEOUTB

TimeoutB (extended clock) enable bit

LL_I2C_SMBUS_ALL_TIMEOUT

TimeoutA and TimeoutB (extended clock) enable bits

Convert SDA SCL timings

__LL_I2C_CONVERT_TIMINGS

Description:

- Configure the SDA setup, hold time and the SCL high, low period.

Parameters:

- __PRESCALER__: This parameter must be a value between Min_Data=0 and Max_Data=0xF.
- __SETUP_TIME__: This parameter must be a value between Min_Data=0 and Max_Data=0xF. (tscldel = (SCLDEL+1)xtpresc)
- __HOLD_TIME__: This parameter must be a value between Min_Data=0 and Max_Data=0xF. (tsdadel = SDADELxtpresc)
- __SCLH_PERIOD__: This parameter must be a value between Min_Data=0 and Max_Data=0xFF. (tsclh = (SCLH+1)xtpresc)
- __SCLL_PERIOD__: This parameter must be a value between Min_Data=0 and Max_Data=0xFF. (tscll = (SCLL+1)xtpresc)

Return value:

- Value: between Min_Data=0 and Max_Data=0xFFFFFFFF

Common Write and read registers Macros

LL_I2C_WriteReg

Description:

- Write a value in I2C register.

Parameters:

- __INSTANCE__: I2C Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_I2C_ReadReg

Description:

- Read a value in I2C register.

Parameters:

- __INSTANCE__: I2C Instance
- __REG__: Register to be read

Return value:

- Register: value

114 LL IWDG Generic Driver

114.1 IWDG Firmware driver API description

The following section lists the various functions of the IWDG library.

114.1.1 Detailed description of functions

LL_IWDG_Enable

Function name

__STATIC_INLINE void LL_IWDG_Enable (IWDG_TypeDef * IWDGx)

Function description

Start the Independent Watchdog.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Notes

- Except if the hardware watchdog option is selected

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_Enable

LL_IWDG_ReloadCounter

Function name

__STATIC_INLINE void LL_IWDG_ReloadCounter (IWDG_TypeDef * IWDGx)

Function description

Reloads IWDG counter with value defined in the reload register.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_ReloadCounter

LL_IWDG_EnableWriteAccess

Function name

__STATIC_INLINE void LL_IWDG_EnableWriteAccess (IWDG_TypeDef * IWDGx)

Function description

Enable write access to IWDG_PR, IWDG_RLR and IWDG_WINR registers.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_EnableWriteAccess

LL_IWDG_DisableWriteAccess

Function name

__STATIC_INLINE void LL_IWDG_DisableWriteAccess (IWDG_TypeDef * IWDGx)

Function description

Disable write access to IWDG_PR, IWDG_RLR and IWDG_WINR registers.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- KR KEY LL_IWDG_DisableWriteAccess

LL_IWDG_SetPrescaler

Function name

__STATIC_INLINE void LL_IWDG_SetPrescaler (IWDG_TypeDef * IWDGx, uint32_t Prescaler)

Function description

Select the prescaler of the IWDG.

Parameters

- **IWDGx:** IWDG Instance
- **Prescaler:** This parameter can be one of the following values:
  - LL_IWDG_PRESCALER_4
  - LL_IWDG_PRESCALER_8
  - LL_IWDG_PRESCALER_16
  - LL_IWDG_PRESCALER_32
  - LL_IWDG_PRESCALER_64
  - LL_IWDG_PRESCALER_128
  - LL_IWDG_PRESCALER_256

Return values

- **None:**

Reference Manual to LL API cross reference:

- PR PR LL_IWDG_SetPrescaler

LL_IWDG_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetPrescaler (IWDG_TypeDef * IWDGx)

Function description

Get the selected prescaler of the IWDG.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_IWDG_PRESCALER_4
  - LL_IWDG_PRESCALER_8
  - LL_IWDG_PRESCALER_16
  - LL_IWDG_PRESCALER_32
  - LL_IWDG_PRESCALER_64
  - LL_IWDG_PRESCALER_128
  - LL_IWDG_PRESCALER_256

Reference Manual to LL API cross reference:

- PR PR LL_IWDG_GetPrescaler

LL_IWDG_SetReloadCounter

Function name

__STATIC_INLINE void LL_IWDG_SetReloadCounter (IWDG_TypeDef * IWDGx, uint32_t Counter)

Function description

Specify the IWDG down-counter reload value.

Parameters

- **IWDGx:** IWDG Instance
- **Counter:** Value between Min_Data=0 and Max_Data=0x0FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RLR RL LL_IWDG_SetReloadCounter

LL_IWDG_GetReloadCounter

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetReloadCounter (IWDG_TypeDef * IWDGx)

Function description

Get the specified IWDG down-counter reload value.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Value:** between Min_Data=0 and Max_Data=0x0FFF

Reference Manual to LL API cross reference:

- RLR RL LL_IWDG_GetReloadCounter

LL_IWDG_SetWindow

Function name

__STATIC_INLINE void LL_IWDG_SetWindow (IWDG_TypeDef * IWDGx, uint32_t Window)

Function description

Specify high limit of the window value to be compared to the down-counter.

Parameters

- **IWDGx:** IWDG Instance
- **Window:** Value between Min_Data=0 and Max_Data=0x0FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- WINR WIN LL_IWDG_SetWindow

LL_IWDG_GetWindow

Function name

__STATIC_INLINE uint32_t LL_IWDG_GetWindow (IWDG_TypeDef * IWDGx)

Function description

Get the high limit of the window value specified.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **Value:** between Min_Data=0 and Max_Data=0x0FFF

Reference Manual to LL API cross reference:

- WINR WIN LL_IWDG_GetWindow

LL_IWDG_IsActiveFlag_PVU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_PVU (IWDG_TypeDef * IWDGx)

Function description

Check if flag Prescaler Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR PVU LL_IWDG_IsActiveFlag_PVU

LL_IWDG_IsActiveFlag_RVU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_RVU (IWDG_TypeDef * IWDGx)

Function description

Check if flag Reload Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR RVU LL_IWDG_IsActiveFlag_RVU

LL_IWDG_IsActiveFlag_WVU

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsActiveFlag_WVU (IWDG_TypeDef * IWDGx)

Function description

Check if flag Window Value Update is set or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR WVU LL_IWDG_IsActiveFlag_WVU

LL_IWDG_IsReady

Function name

__STATIC_INLINE uint32_t LL_IWDG_IsReady (IWDG_TypeDef * IWDGx)

Function description

Check if all flags Prescaler, Reload & Window Value Update are reset or not.

Parameters

- **IWDGx:** IWDG Instance

Return values

- **State:** of bits (1 or 0).

Reference Manual to LL API cross reference:

- SR PVU LL_IWDG_IsReady
- SR RVU LL_IWDG_IsReady
- SR WVU LL_IWDG_IsReady

114.2 IWDG Firmware driver defines

The following section lists the various define and macros of the module.

114.2.1 IWDG

IWDG

Get Flags Defines

LL_IWDG_SR_PVU

Watchdog prescaler value update

LL_IWDG_SR_RVU

Watchdog counter reload value update

LL_IWDG_SR_WVU

Watchdog counter window value update

Prescaler Divider

LL_IWDG_PRESCALER_4

Divider by 4

LL_IWDG_PRESCALER_8

Common Write and read registers Macros

LL_IWDG_WriteReg

Description:

- Write a value in IWDG register.

Parameters:

- __INSTANCE__: IWDG Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_IWDG_ReadReg

Description:

- Read a value in IWDG register.

Parameters:

- __INSTANCE__: IWDG Instance
- __REG__: Register to be read

Return value:

- Register: value

115 LL LPTIM Generic Driver

115.1 LPTIM Firmware driver registers structures

115.1.1 LL_LPTIM_InitTypeDef

LL_LPTIM_InitTypeDef is defined in the stm32h7xx_ll_lptim.h

Data Fields

- ***uint32_t ClockSource***
- ***uint32_t Prescaler***
- ***uint32_t Waveform***
- ***uint32_t Polarity***

Field Documentation

- ***uint32_t LL_LPTIM_InitTypeDef::ClockSource***

  Specifies the source of the clock used by the LPTIM instance. This parameter can be a value of ***LPTIM_LL_EC_CLK_SOURCE***.This feature can be modified afterwards using unitary function **LL_LPTIM_SetClockSource()**.
- ***uint32_t LL_LPTIM_InitTypeDef::Prescaler***

  Specifies the prescaler division ratio. This parameter can be a value of ***LPTIM_LL_EC_PRESCALER***.This feature can be modified afterwards using using unitary function **LL_LPTIM_SetPrescaler()**.
- ***uint32_t LL_LPTIM_InitTypeDef::Waveform***

  Specifies the waveform shape. This parameter can be a value of ***LPTIM_LL_EC_OUTPUT_WAVEFORM***.This feature can be modified afterwards using unitary function **LL_LPTIM_ConfigOutput()**.
- ***uint32_t LL_LPTIM_InitTypeDef::Polarity***

  Specifies waveform polarity. This parameter can be a value of ***LPTIM_LL_EC_OUTPUT_POLARITY***.This feature can be modified afterwards using unitary function **LL_LPTIM_ConfigOutput()**.

115.2 LPTIM Firmware driver API description

The following section lists the various functions of the LPTIM library.

115.2.1 Detailed description of functions

LL_LPTIM_DeInit

Function name

ErrorStatus LL_LPTIM_DeInit (LPTIM_TypeDef * LPTIMx)

Function description

Set LPTIMx registers to their reset values.

Parameters

- **LPTIMx:** LP Timer instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPTIMx registers are de-initialized
  - ERROR: invalid LPTIMx instance

LL_LPTIM_StructInit

Function name

void LL_LPTIM_StructInit (LL_LPTIM_InitTypeDef * LPTIM_InitStruct)

Function description

Set each fields of the LPTIM_InitStruct structure to its default value.

Parameters

- **LPTIM_InitStruct:** pointer to a LL_LPTIM_InitTypeDef structure

Return values

- **None:**

LL_LPTIM_Init

Function name

ErrorStatus LL_LPTIM_Init (LPTIM_TypeDef * LPTIMx, const LL_LPTIM_InitTypeDef * LPTIM_InitStruct)

Function description

Configure the LPTIMx peripheral according to the specified parameters.

Parameters

- **LPTIMx:** LP Timer Instance
- **LPTIM_InitStruct:** pointer to a LL_LPTIM_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPTIMx instance has been initialized
  - ERROR: LPTIMx instance hasn't been initialized

Notes

- LL_LPTIM_Init can only be called when the LPTIM instance is disabled.
- LPTIMx can be disabled using unitary function LL_LPTIM_Disable().

LL_LPTIM_Disable

Function name

void LL_LPTIM_Disable (LPTIM_TypeDef * LPTIMx)

Function description

Disable the LPTIM instance.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- The following sequence is required to solve LPTIM disable HW limitation. Please check Errata Sheet ES0335 for more details under "MCU may remain stuck in LPTIM interrupt when entering Stop mode" section.

Reference Manual to LL API cross reference:

- CR ENABLE LL_LPTIM_Disable

LL_LPTIM_Enable

Function name

__STATIC_INLINE void LL_LPTIM_Enable (LPTIM_TypeDef * LPTIMx)

Function description

Enable the LPTIM instance.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- After setting the ENABLE bit, a delay of two counter clock is needed before the LPTIM instance is actually enabled.

Reference Manual to LL API cross reference:

- CR ENABLE LL_LPTIM_Enable

LL_LPTIM_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabled (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the LPTIM instance is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ENABLE LL_LPTIM_IsEnabled

LL_LPTIM_StartCounter

Function name

__STATIC_INLINE void LL_LPTIM_StartCounter (LPTIM_TypeDef * LPTIMx, uint32_t OperatingMode)

Function description

Starts the LPTIM counter in the desired mode.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **OperatingMode:** This parameter can be one of the following values:
  - LL_LPTIM_OPERATING_MODE_CONTINUOUS
  - LL_LPTIM_OPERATING_MODE_ONESHOT

Return values

- **None:**

Notes

- LPTIM instance must be enabled before starting the counter.
- It is possible to change on the fly from One Shot mode to Continuous mode.

Reference Manual to LL API cross reference:

- CR CNTSTRT LL_LPTIM_StartCounter
- CR SNGSTRT LL_LPTIM_StartCounter

LL_LPTIM_EnableResetAfterRead

Function name

__STATIC_INLINE void LL_LPTIM_EnableResetAfterRead (LPTIM_TypeDef * LPTIMx)

Function description

Enable reset after read.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- After calling this function any read access to LPTIM_CNT register will asynchronously reset the LPTIM_CNT register content.

Reference Manual to LL API cross reference:

- CR RSTARE LL_LPTIM_EnableResetAfterRead

LL_LPTIM_DisableResetAfterRead

Function name

__STATIC_INLINE void LL_LPTIM_DisableResetAfterRead (LPTIM_TypeDef * LPTIMx)

Function description

Disable reset after read.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RSTARE LL_LPTIM_DisableResetAfterRead

LL_LPTIM_IsEnabledResetAfterRead

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledResetAfterRead (const LPTIM_TypeDef * LPTIMx)

Function description

Indicate whether the reset after read feature is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RSTARE LL_LPTIM_IsEnabledResetAfterRead

LL_LPTIM_ResetCounter

Function name

__STATIC_INLINE void LL_LPTIM_ResetCounter (LPTIM_TypeDef * LPTIMx)

Function description

Reset of the LPTIM_CNT counter register (synchronous).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- Due to the synchronous nature of this reset, it only takes place after a synchronization delay of 3 LPTIM core clock cycles (LPTIM core clock may be different from APB clock).
- COUNTRST is automatically cleared by hardware

Reference Manual to LL API cross reference:

- CR COUNTRST LL_LPTIM_ResetCounter
-

LL_LPTIM_SetUpdateMode

Function name

__STATIC_INLINE void LL_LPTIM_SetUpdateMode (LPTIM_TypeDef * LPTIMx, uint32_t UpdateMode)

Function description

Set the LPTIM registers update mode (enable/disable register preload)

Parameters

- **LPTIMx:** Low-Power Timer instance
- **UpdateMode:** This parameter can be one of the following values:
  - LL_LPTIM_UPDATE_MODE_IMMEDIATE
  - LL_LPTIM_UPDATE_MODE_ENDOFPERIOD

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR PRELOAD LL_LPTIM_SetUpdateMode

LL_LPTIM_GetUpdateMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetUpdateMode (const LPTIM_TypeDef * LPTIMx)

Function description

Get the LPTIM registers update mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_UPDATE_MODE_IMMEDIATE
  - LL_LPTIM_UPDATE_MODE_ENDOFPERIOD

Reference Manual to LL API cross reference:

- CFGR PRELOAD LL_LPTIM_GetUpdateMode

LL_LPTIM_SetAutoReload

Function name

__STATIC_INLINE void LL_LPTIM_SetAutoReload (LPTIM_TypeDef * LPTIMx, uint32_t AutoReload)

Function description

Set the auto reload value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **AutoReload:** Value between Min_Data=0x0001 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- The LPTIMx_ARR register content must only be modified when the LPTIM is enabled
- After a write to the LPTIMx_ARR register a new write operation to the same register can only be performed when the previous write operation is completed. Any successive write before the ARROK flag is set, will lead to unpredictable results.
- autoreload value be strictly greater than the compare value.

Reference Manual to LL API cross reference:

- ARR ARR LL_LPTIM_SetAutoReload

LL_LPTIM_GetAutoReload

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetAutoReload (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual auto reload value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **AutoReload:** Value between Min_Data=0x0001 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- ARR ARR LL_LPTIM_GetAutoReload

LL_LPTIM_SetCompare

Function name

__STATIC_INLINE void LL_LPTIM_SetCompare (LPTIM_TypeDef * LPTIMx, uint32_t CompareValue)

Function description

Set the compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- After a write to the LPTIMx_CMP register a new write operation to the same register can only be performed when the previous write operation is completed. Any successive write before the CMPOK flag is set, will lead to unpredictable results.

Reference Manual to LL API cross reference:

- CMP CMP LL_LPTIM_SetCompare

LL_LPTIM_GetCompare

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetCompare (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual compare value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **CompareValue:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- CMP CMP LL_LPTIM_GetCompare

LL_LPTIM_GetCounter

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetCounter (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual counter value.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Counter:** value

Notes

- When the LPTIM instance is running with an asynchronous clock, reading the LPTIMx_CNT register may return unreliable values. So in this case it is necessary to perform two consecutive read accesses and verify that the two returned values are identical.

Reference Manual to LL API cross reference:

- CNT CNT LL_LPTIM_GetCounter

LL_LPTIM_SetCounterMode

Function name

__STATIC_INLINE void LL_LPTIM_SetCounterMode (LPTIM_TypeDef * LPTIMx, uint32_t CounterMode)

Function description

Set the counter mode (selection of the LPTIM counter clock source).

Parameters

- **LPTIMx:** Low-Power Timer instance
- **CounterMode:** This parameter can be one of the following values:
  - LL_LPTIM_COUNTER_MODE_INTERNAL
  - LL_LPTIM_COUNTER_MODE_EXTERNAL

Return values

- **None:**

Notes

- The counter mode can be set only when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR COUNTMODE LL_LPTIM_SetCounterMode

LL_LPTIM_GetCounterMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetCounterMode (const LPTIM_TypeDef * LPTIMx)

Function description

Get the counter mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_COUNTER_MODE_INTERNAL
  - LL_LPTIM_COUNTER_MODE_EXTERNAL

Reference Manual to LL API cross reference:

- CFGR COUNTMODE LL_LPTIM_GetCounterMode

LL_LPTIM_ConfigOutput

Function name

__STATIC_INLINE void LL_LPTIM_ConfigOutput (LPTIM_TypeDef * LPTIMx, uint32_t Waveform, uint32_t Polarity)

Function description

Configure the LPTIM instance output (LPTIMx_OUT)

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Waveform:** This parameter can be one of the following values:
  - LL_LPTIM_OUTPUT_WAVEFORM_PWM
  - LL_LPTIM_OUTPUT_WAVEFORM_SETONCE
- **Polarity:** This parameter can be one of the following values:
  - LL_LPTIM_OUTPUT_POLARITY_REGULAR
  - LL_LPTIM_OUTPUT_POLARITY_INVERSE

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- Regarding the LPTIM output polarity the change takes effect immediately, so the output default value will change immediately after the polarity is re-configured, even before the timer is enabled.

Reference Manual to LL API cross reference:

- CFGR WAVE LL_LPTIM_ConfigOutput
- CFGR WAVPOL LL_LPTIM_ConfigOutput

LL_LPTIM_SetWaveform

Function name

__STATIC_INLINE void LL_LPTIM_SetWaveform (LPTIM_TypeDef * LPTIMx, uint32_t Waveform)

Function description

Set waveform shape.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Waveform:** This parameter can be one of the following values:
  - LL_LPTIM_OUTPUT_WAVEFORM_PWM
  - LL_LPTIM_OUTPUT_WAVEFORM_SETONCE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR WAVE LL_LPTIM_SetWaveform

LL_LPTIM_GetWaveform

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetWaveform (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual waveform shape.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_OUTPUT_WAVEFORM_PWM
  - LL_LPTIM_OUTPUT_WAVEFORM_SETONCE

Reference Manual to LL API cross reference:

- CFGR WAVE LL_LPTIM_GetWaveform

LL_LPTIM_SetPolarity

Function name

__STATIC_INLINE void LL_LPTIM_SetPolarity (LPTIM_TypeDef * LPTIMx, uint32_t Polarity)

Function description

Set output polarity.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Polarity:** This parameter can be one of the following values:
  - LL_LPTIM_OUTPUT_POLARITY_REGULAR
  - LL_LPTIM_OUTPUT_POLARITY_INVERSE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR WAVPOL LL_LPTIM_SetPolarity

LL_LPTIM_GetPolarity

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetPolarity (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual output polarity.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_OUTPUT_POLARITY_REGULAR
  - LL_LPTIM_OUTPUT_POLARITY_INVERSE

Reference Manual to LL API cross reference:

- CFGR WAVPOL LL_LPTIM_GetPolarity

LL_LPTIM_SetPrescaler

Function name

__STATIC_INLINE void LL_LPTIM_SetPrescaler (LPTIM_TypeDef * LPTIMx, uint32_t Prescaler)

Function description

Set actual prescaler division ratio.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Prescaler:** This parameter can be one of the following values:
  - LL_LPTIM_PRESCALER_DIV1
  - LL_LPTIM_PRESCALER_DIV2
  - LL_LPTIM_PRESCALER_DIV4
  - LL_LPTIM_PRESCALER_DIV8
  - LL_LPTIM_PRESCALER_DIV16
  - LL_LPTIM_PRESCALER_DIV32
  - LL_LPTIM_PRESCALER_DIV64
  - LL_LPTIM_PRESCALER_DIV128

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- When the LPTIM is configured to be clocked by an internal clock source and the LPTIM counter is configured to be updated by active edges detected on the LPTIM external Input1, the internal clock provided to the LPTIM must be not be prescaled.

Reference Manual to LL API cross reference:

- CFGR PRESC LL_LPTIM_SetPrescaler

LL_LPTIM_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetPrescaler (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual prescaler division ratio.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_PRESCALER_DIV1
  - LL_LPTIM_PRESCALER_DIV2
  - LL_LPTIM_PRESCALER_DIV4
  - LL_LPTIM_PRESCALER_DIV8
  - LL_LPTIM_PRESCALER_DIV16
  - LL_LPTIM_PRESCALER_DIV32
  - LL_LPTIM_PRESCALER_DIV64
  - LL_LPTIM_PRESCALER_DIV128

Reference Manual to LL API cross reference:

- CFGR PRESC LL_LPTIM_GetPrescaler

LL_LPTIM_SetInput1Src

Function name

__STATIC_INLINE void LL_LPTIM_SetInput1Src (LPTIM_TypeDef * LPTIMx, uint32_t Src)

Function description

Set LPTIM input 1 source (default GPIO).

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Src:** This parameter can be one of the following values:
  - LL_LPTIM_INPUT1_SRC_GPIO
  - LL_LPTIM_INPUT1_SRC_COMP1
  - LL_LPTIM_INPUT1_SRC_COMP2
  - LL_LPTIM_INPUT1_SRC_COMP1_COMP2
  - LL_LPTIM_INPUT1_SRC_SAI4_FS_A
  - LL_LPTIM_INPUT1_SRC_SAI4_FS_B

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 IN1SEL LL_LPTIM_SetInput1Src

LL_LPTIM_SetInput2Src

Function name

__STATIC_INLINE void LL_LPTIM_SetInput2Src (LPTIM_TypeDef * LPTIMx, uint32_t Src)

Function description

Set LPTIM input 2 source (default GPIO).

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Src:** This parameter can be one of the following values:
  - LL_LPTIM_INPUT2_SRC_GPIO
  - LL_LPTIM_INPUT2_SRC_COMP2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR2 IN2SEL LL_LPTIM_SetInput2Src

LL_LPTIM_EnableTimeout

Function name

__STATIC_INLINE void LL_LPTIM_EnableTimeout (LPTIM_TypeDef * LPTIMx)

Function description

Enable the timeout function.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- The first trigger event will start the timer, any successive trigger event will reset the counter and the timer will restart.
- The timeout value corresponds to the compare value; if no trigger occurs within the expected time frame, the MCU is waked-up by the compare match event.

Reference Manual to LL API cross reference:

- CFGR TIMOUT LL_LPTIM_EnableTimeout

LL_LPTIM_DisableTimeout

Function name

__STATIC_INLINE void LL_LPTIM_DisableTimeout (LPTIM_TypeDef * LPTIMx)

Function description

Disable the timeout function.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- A trigger event arriving when the timer is already started will be ignored.

Reference Manual to LL API cross reference:

- CFGR TIMOUT LL_LPTIM_DisableTimeout

LL_LPTIM_IsEnabledTimeout

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledTimeout (const LPTIM_TypeDef * LPTIMx)

Function description

Indicate whether the timeout function is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR TIMOUT LL_LPTIM_IsEnabledTimeout

LL_LPTIM_TrigSw

Function name

__STATIC_INLINE void LL_LPTIM_TrigSw (LPTIM_TypeDef * LPTIMx)

Function description

Start the LPTIM counter.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR TRIGEN LL_LPTIM_TrigSw

LL_LPTIM_ConfigTrigger

Function name

__STATIC_INLINE void LL_LPTIM_ConfigTrigger (LPTIM_TypeDef * LPTIMx, uint32_t Source, uint32_t Filter, uint32_t Polarity)

Function description

Configure the external trigger used as a trigger event for the LPTIM.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **Source:** This parameter can be one of the following values:
  - LL_LPTIM_TRIG_SOURCE_GPIO
  - LL_LPTIM_TRIG_SOURCE_RTCALARMA
  - LL_LPTIM_TRIG_SOURCE_RTCALARMB
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP1
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP2
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP3
  - LL_LPTIM_TRIG_SOURCE_COMP1
  - LL_LPTIM_TRIG_SOURCE_COMP2
  - LL_LPTIM_TRIG_SOURCE_LPTIM2 (*)
  - LL_LPTIM_TRIG_SOURCE_LPTIM3 (*)
  - LL_LPTIM_TRIG_SOURCE_LPTIM4 (*)
  - LL_LPTIM_TRIG_SOURCE_LPTIM5 (*)
  - LL_LPTIM_TRIG_SOURCE_SAI1_FS_A (*)
  - LL_LPTIM_TRIG_SOURCE_SAI1_FS_B (*)
  - LL_LPTIM_TRIG_SOURCE_SAI2_FS_A (*)
  - LL_LPTIM_TRIG_SOURCE_SAI2_FS_B (*)
  - LL_LPTIM_TRIG_SOURCE_SAI4_FS_A (*)
  - LL_LPTIM_TRIG_SOURCE_SAI4_FS_B (*)
  - LL_LPTIM_TRIG_SOURCE_DFSDM2_BRK (*)

  (*) Value not defined in all devices.
-
- **Filter:** This parameter can be one of the following values:
  - LL_LPTIM_TRIG_FILTER_NONE
  - LL_LPTIM_TRIG_FILTER_2
  - LL_LPTIM_TRIG_FILTER_4
  - LL_LPTIM_TRIG_FILTER_8
- **Polarity:** This parameter can be one of the following values:
  - LL_LPTIM_TRIG_POLARITY_RISING
  - LL_LPTIM_TRIG_POLARITY_FALLING
  - LL_LPTIM_TRIG_POLARITY_RISING_FALLING

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- An internal clock source must be present when a digital filter is required for the trigger.

Reference Manual to LL API cross reference:

- CFGR TRIGSEL LL_LPTIM_ConfigTrigger
- CFGR TRGFLT LL_LPTIM_ConfigTrigger
- CFGR TRIGEN LL_LPTIM_ConfigTrigger

LL_LPTIM_GetTriggerSource

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetTriggerSource (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual external trigger source.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_TRIG_SOURCE_GPIO
  - LL_LPTIM_TRIG_SOURCE_RTCALARMA
  - LL_LPTIM_TRIG_SOURCE_RTCALARMB
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP1
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP2
  - LL_LPTIM_TRIG_SOURCE_RTCTAMP3
  - LL_LPTIM_TRIG_SOURCE_COMP1
  - LL_LPTIM_TRIG_SOURCE_COMP2
  - LL_LPTIM_TRIG_SOURCE_LPTIM2 (*)
  - LL_LPTIM_TRIG_SOURCE_LPTIM3 (*)
  - LL_LPTIM_TRIG_SOURCE_LPTIM4 (*)
  - LL_LPTIM_TRIG_SOURCE_LPTIM5 (*)
  - LL_LPTIM_TRIG_SOURCE_SAI1_FS_A (*)
  - LL_LPTIM_TRIG_SOURCE_SAI1_FS_B (*)
  - LL_LPTIM_TRIG_SOURCE_SAI2_FS_A (*)
  - LL_LPTIM_TRIG_SOURCE_SAI2_FS_B (*)
  - LL_LPTIM_TRIG_SOURCE_SAI4_FS_A (*)
  - LL_LPTIM_TRIG_SOURCE_SAI4_FS_B (*)
  - LL_LPTIM_TRIG_SOURCE_DFSDM2_BRK (*)

  (*) Value not defined in all devices.
-

Reference Manual to LL API cross reference:

- CFGR TRIGSEL LL_LPTIM_GetTriggerSource

LL_LPTIM_GetTriggerFilter

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetTriggerFilter (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual external trigger filter.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_TRIG_FILTER_NONE
  - LL_LPTIM_TRIG_FILTER_2
  - LL_LPTIM_TRIG_FILTER_4
  - LL_LPTIM_TRIG_FILTER_8

Reference Manual to LL API cross reference:

- CFGR TRGFLT LL_LPTIM_GetTriggerFilter

LL_LPTIM_GetTriggerPolarity

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetTriggerPolarity (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual external trigger polarity.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_TRIG_POLARITY_RISING
  - LL_LPTIM_TRIG_POLARITY_FALLING
  - LL_LPTIM_TRIG_POLARITY_RISING_FALLING

Reference Manual to LL API cross reference:

- CFGR TRIGEN LL_LPTIM_GetTriggerPolarity

LL_LPTIM_SetClockSource

Function name

__STATIC_INLINE void LL_LPTIM_SetClockSource (LPTIM_TypeDef * LPTIMx, uint32_t ClockSource)

Function description

Set the source of the clock used by the LPTIM instance.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **ClockSource:** This parameter can be one of the following values:
  - LL_LPTIM_CLK_SOURCE_INTERNAL
  - LL_LPTIM_CLK_SOURCE_EXTERNAL

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR CKSEL LL_LPTIM_SetClockSource

LL_LPTIM_GetClockSource

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetClockSource (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual LPTIM instance clock source.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_CLK_SOURCE_INTERNAL
  - LL_LPTIM_CLK_SOURCE_EXTERNAL

Reference Manual to LL API cross reference:

- CFGR CKSEL LL_LPTIM_GetClockSource

LL_LPTIM_ConfigClock

Function name

__STATIC_INLINE void LL_LPTIM_ConfigClock (LPTIM_TypeDef * LPTIMx, uint32_t ClockFilter, uint32_t ClockPolarity)

Function description

Configure the active edge or edges used by the counter when the LPTIM is clocked by an external clock source.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **ClockFilter:** This parameter can be one of the following values:
  - LL_LPTIM_CLK_FILTER_NONE
  - LL_LPTIM_CLK_FILTER_2
  - LL_LPTIM_CLK_FILTER_4
  - LL_LPTIM_CLK_FILTER_8
- **ClockPolarity:** This parameter can be one of the following values:
  - LL_LPTIM_CLK_POLARITY_RISING
  - LL_LPTIM_CLK_POLARITY_FALLING
  - LL_LPTIM_CLK_POLARITY_RISING_FALLING

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- When both external clock signal edges are considered active ones, the LPTIM must also be clocked by an internal clock source with a frequency equal to at least four times the external clock frequency.
- An internal clock source must be present when a digital filter is required for external clock.

Reference Manual to LL API cross reference:

- CFGR CKFLT LL_LPTIM_ConfigClock
- CFGR CKPOL LL_LPTIM_ConfigClock

LL_LPTIM_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetClockPolarity (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual clock polarity.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_CLK_POLARITY_RISING
  - LL_LPTIM_CLK_POLARITY_FALLING
  - LL_LPTIM_CLK_POLARITY_RISING_FALLING

Reference Manual to LL API cross reference:

- CFGR CKPOL LL_LPTIM_GetClockPolarity

LL_LPTIM_GetClockFilter

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetClockFilter (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual clock digital filter.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_CLK_FILTER_NONE
  - LL_LPTIM_CLK_FILTER_2
  - LL_LPTIM_CLK_FILTER_4
  - LL_LPTIM_CLK_FILTER_8

Reference Manual to LL API cross reference:

- CFGR CKFLT LL_LPTIM_GetClockFilter

LL_LPTIM_SetEncoderMode

Function name

__STATIC_INLINE void LL_LPTIM_SetEncoderMode (LPTIM_TypeDef * LPTIMx, uint32_t EncoderMode)

Function description

Configure the encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance
- **EncoderMode:** This parameter can be one of the following values:
  - LL_LPTIM_ENCODER_MODE_RISING
  - LL_LPTIM_ENCODER_MODE_FALLING
  - LL_LPTIM_ENCODER_MODE_RISING_FALLING

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR CKPOL LL_LPTIM_SetEncoderMode

LL_LPTIM_GetEncoderMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_GetEncoderMode (const LPTIM_TypeDef * LPTIMx)

Function description

Get actual encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPTIM_ENCODER_MODE_RISING
  - LL_LPTIM_ENCODER_MODE_FALLING
  - LL_LPTIM_ENCODER_MODE_RISING_FALLING

Reference Manual to LL API cross reference:

- CFGR CKPOL LL_LPTIM_GetEncoderMode

LL_LPTIM_EnableEncoderMode

Function name

__STATIC_INLINE void LL_LPTIM_EnableEncoderMode (LPTIM_TypeDef * LPTIMx)

Function description

Enable the encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.
- In this mode the LPTIM instance must be clocked by an internal clock source. Also, the prescaler division ratio must be equal to 1.
- LPTIM instance must be configured in continuous mode prior enabling the encoder mode.

Reference Manual to LL API cross reference:

- CFGR ENC LL_LPTIM_EnableEncoderMode

LL_LPTIM_DisableEncoderMode

Function name

__STATIC_INLINE void LL_LPTIM_DisableEncoderMode (LPTIM_TypeDef * LPTIMx)

Function description

Disable the encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Notes

- This function must be called when the LPTIM instance is disabled.

Reference Manual to LL API cross reference:

- CFGR ENC LL_LPTIM_DisableEncoderMode

LL_LPTIM_IsEnabledEncoderMode

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledEncoderMode (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the LPTIM operates in encoder mode.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFGR ENC LL_LPTIM_IsEnabledEncoderMode

LL_LPTIM_ClearFlag_CMPM

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CMPM (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare match flag (CMPMCF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMPMCF LL_LPTIM_ClearFlag_CMPM

LL_LPTIM_IsActiveFlag_CMPM

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CMPM (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a compare match interrupt has occurred.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMPM LL_LPTIM_IsActiveFlag_CMPM

LL_LPTIM_ClearFlag_ARRM

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_ARRM (LPTIM_TypeDef * LPTIMx)

Function description

Clear the autoreload match flag (ARRMCF)

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ARRMCF LL_LPTIM_ClearFlag_ARRM

LL_LPTIM_IsActiveFlag_ARRM

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_ARRM (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a autoreload match interrupt has occurred.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ARRM LL_LPTIM_IsActiveFlag_ARRM

LL_LPTIM_ClearFlag_EXTTRIG

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_EXTTRIG (LPTIM_TypeDef * LPTIMx)

Function description

Clear the external trigger valid edge flag(EXTTRIGCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR EXTTRIGCF LL_LPTIM_ClearFlag_EXTTRIG

LL_LPTIM_IsActiveFlag_EXTTRIG

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_EXTTRIG (const LPTIM_TypeDef * LPTIMx)

Function description

Inform application whether a valid edge on the selected external trigger input has occurred.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR EXTTRIG LL_LPTIM_IsActiveFlag_EXTTRIG

LL_LPTIM_ClearFlag_CMPOK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_CMPOK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the compare register update interrupt flag (CMPOKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMPOKCF LL_LPTIM_ClearFlag_CMPOK

LL_LPTIM_IsActiveFlag_CMPOK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_CMPOK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_CMP register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMPOK LL_LPTIM_IsActiveFlag_CMPOK

LL_LPTIM_ClearFlag_ARROK

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_ARROK (LPTIM_TypeDef * LPTIMx)

Function description

Clear the autoreload register update interrupt flag (ARROKCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ARROKCF LL_LPTIM_ClearFlag_ARROK

LL_LPTIM_IsActiveFlag_ARROK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_ARROK (const LPTIM_TypeDef * LPTIMx)

Function description

Informs application whether the APB bus write operation to the LPTIMx_ARR register has been successfully completed.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ARROK LL_LPTIM_IsActiveFlag_ARROK

LL_LPTIM_ClearFlag_UP

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_UP (LPTIM_TypeDef * LPTIMx)

Function description

Clear the counter direction change to up interrupt flag (UPCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR UPCF LL_LPTIM_ClearFlag_UP

LL_LPTIM_IsActiveFlag_UP

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_UP (const LPTIM_TypeDef * LPTIMx)

Function description

Informs the application whether the counter direction has changed from down to up (when the LPTIM instance operates in encoder mode).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR UP LL_LPTIM_IsActiveFlag_UP

LL_LPTIM_ClearFlag_DOWN

Function name

__STATIC_INLINE void LL_LPTIM_ClearFlag_DOWN (LPTIM_TypeDef * LPTIMx)

Function description

Clear the counter direction change to down interrupt flag (DOWNCF).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR DOWNCF LL_LPTIM_ClearFlag_DOWN

LL_LPTIM_IsActiveFlag_DOWN

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsActiveFlag_DOWN (const LPTIM_TypeDef * LPTIMx)

Function description

Informs the application whether the counter direction has changed from up to down (when the LPTIM instance operates in encoder mode).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR DOWN LL_LPTIM_IsActiveFlag_DOWN

LL_LPTIM_EnableIT_CMPM

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CMPM (LPTIM_TypeDef * LPTIMx)

Function description

Enable compare match interrupt (CMPMIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMPMIE LL_LPTIM_EnableIT_CMPM

LL_LPTIM_DisableIT_CMPM

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CMPM (LPTIM_TypeDef * LPTIMx)

Function description

Disable compare match interrupt (CMPMIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMPMIE LL_LPTIM_DisableIT_CMPM

LL_LPTIM_IsEnabledIT_CMPM

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CMPM (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the compare match interrupt (CMPMIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER CMPMIE LL_LPTIM_IsEnabledIT_CMPM

LL_LPTIM_EnableIT_ARRM

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_ARRM (LPTIM_TypeDef * LPTIMx)

Function description

Enable autoreload match interrupt (ARRMIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ARRMIE LL_LPTIM_EnableIT_ARRM

LL_LPTIM_DisableIT_ARRM

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_ARRM (LPTIM_TypeDef * LPTIMx)

Function description

Disable autoreload match interrupt (ARRMIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ARRMIE LL_LPTIM_DisableIT_ARRM

LL_LPTIM_IsEnabledIT_ARRM

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_ARRM (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the autoreload match interrupt (ARRMIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER ARRMIE LL_LPTIM_IsEnabledIT_ARRM

LL_LPTIM_EnableIT_EXTTRIG

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_EXTTRIG (LPTIM_TypeDef * LPTIMx)

Function description

Enable external trigger valid edge interrupt (EXTTRIGIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EXTTRIGIE LL_LPTIM_EnableIT_EXTTRIG

LL_LPTIM_DisableIT_EXTTRIG

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_EXTTRIG (LPTIM_TypeDef * LPTIMx)

Function description

Disable external trigger valid edge interrupt (EXTTRIGIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EXTTRIGIE LL_LPTIM_DisableIT_EXTTRIG

LL_LPTIM_IsEnabledIT_EXTTRIG

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_EXTTRIG (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates external trigger valid edge interrupt (EXTTRIGIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER EXTTRIGIE LL_LPTIM_IsEnabledIT_EXTTRIG

LL_LPTIM_EnableIT_CMPOK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_CMPOK (LPTIM_TypeDef * LPTIMx)

Function description

Enable compare register write completed interrupt (CMPOKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMPOKIE LL_LPTIM_EnableIT_CMPOK

LL_LPTIM_DisableIT_CMPOK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_CMPOK (LPTIM_TypeDef * LPTIMx)

Function description

Disable compare register write completed interrupt (CMPOKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CMPOKIE LL_LPTIM_DisableIT_CMPOK

LL_LPTIM_IsEnabledIT_CMPOK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_CMPOK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the compare register write completed interrupt (CMPOKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER CMPOKIE LL_LPTIM_IsEnabledIT_CMPOK

LL_LPTIM_EnableIT_ARROK

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_ARROK (LPTIM_TypeDef * LPTIMx)

Function description

Enable autoreload register write completed interrupt (ARROKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ARROKIE LL_LPTIM_EnableIT_ARROK

LL_LPTIM_DisableIT_ARROK

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_ARROK (LPTIM_TypeDef * LPTIMx)

Function description

Disable autoreload register write completed interrupt (ARROKIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER ARROKIE LL_LPTIM_DisableIT_ARROK

LL_LPTIM_IsEnabledIT_ARROK

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_ARROK (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the autoreload register write completed interrupt (ARROKIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- IER ARROKIE LL_LPTIM_IsEnabledIT_ARROK

LL_LPTIM_EnableIT_UP

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_UP (LPTIM_TypeDef * LPTIMx)

Function description

Enable direction change to up interrupt (UPIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UPIE LL_LPTIM_EnableIT_UP

LL_LPTIM_DisableIT_UP

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_UP (LPTIM_TypeDef * LPTIMx)

Function description

Disable direction change to up interrupt (UPIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UPIE LL_LPTIM_DisableIT_UP

LL_LPTIM_IsEnabledIT_UP

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_UP (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the direction change to up interrupt (UPIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- IER UPIE LL_LPTIM_IsEnabledIT_UP

LL_LPTIM_EnableIT_DOWN

Function name

__STATIC_INLINE void LL_LPTIM_EnableIT_DOWN (LPTIM_TypeDef * LPTIMx)

Function description

Enable direction change to down interrupt (DOWNIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DOWNIE LL_LPTIM_EnableIT_DOWN

LL_LPTIM_DisableIT_DOWN

Function name

__STATIC_INLINE void LL_LPTIM_DisableIT_DOWN (LPTIM_TypeDef * LPTIMx)

Function description

Disable direction change to down interrupt (DOWNIE).

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DOWNIE LL_LPTIM_DisableIT_DOWN

LL_LPTIM_IsEnabledIT_DOWN

Function name

__STATIC_INLINE uint32_t LL_LPTIM_IsEnabledIT_DOWN (const LPTIM_TypeDef * LPTIMx)

Function description

Indicates whether the direction change to down interrupt (DOWNIE) is enabled.

Parameters

- **LPTIMx:** Low-Power Timer instance

Return values

- **State:** of bit(1 or 0).

Reference Manual to LL API cross reference:

- IER DOWNIE LL_LPTIM_IsEnabledIT_DOWN

115.3 LPTIM Firmware driver defines

The following section lists the various define and macros of the module.

115.3.1 LPTIM

LPTIM

Input1 Source

LL_LPTIM_INPUT1_SRC_GPIO

For LPTIM1 and LPTIM2

LL_LPTIM_INPUT1_SRC_COMP1

For LPTIM1 and LPTIM2

LL_LPTIM_INPUT1_SRC_COMP2

For LPTIM2

LL_LPTIM_INPUT1_SRC_COMP1_COMP2

For LPTIM2

LL_LPTIM_INPUT1_SRC_SAI4_FS_A

For LPTIM3

LL_LPTIM_INPUT1_SRC_SAI4_FS_B

For LPTIM3

Input2 Source

LL_LPTIM_INPUT2_SRC_GPIO

For LPTIM1

LL_LPTIM_INPUT2_SRC_COMP2

For LPTIM1

Clock Filter

LL_LPTIM_CLK_FILTER_NONE

Any external clock signal level change is considered as a valid transition

LL_LPTIM_CLK_FILTER_2

External clock signal level change must be stable for at least 2 clock periods before it is considered as valid transition

LL_LPTIM_CLK_FILTER_4

External clock signal level change must be stable for at least 4 clock periods before it is considered as valid transition

LL_LPTIM_CLK_FILTER_8

External clock signal level change must be stable for at least 8 clock periods before it is considered as valid transition

Clock Polarity

LL_LPTIM_CLK_POLARITY_RISING

The rising edge is the active edge used for counting

LL_LPTIM_CLK_POLARITY_FALLING

The falling edge is the active edge used for counting

LL_LPTIM_CLK_POLARITY_RISING_FALLING

Both edges are active edges

Clock Source

LL_LPTIM_CLK_SOURCE_INTERNAL

LPTIM is clocked by internal clock source (APB clock or any of the embedded oscillators)

LL_LPTIM_CLK_SOURCE_EXTERNAL

LPTIM is clocked by an external clock source through the LPTIM external Input1

Counter Mode

LL_LPTIM_COUNTER_MODE_INTERNAL

The counter is incremented following each internal clock pulse

LL_LPTIM_COUNTER_MODE_EXTERNAL

The counter is incremented following each valid clock pulse on the LPTIM external Input1

Encoder Mode

LL_LPTIM_ENCODER_MODE_RISING

The rising edge is the active edge used for counting

LL_LPTIM_ENCODER_MODE_FALLING

The falling edge is the active edge used for counting

LL_LPTIM_ENCODER_MODE_RISING_FALLING

Both edges are active edges

Get Flags Defines

LL_LPTIM_ISR_CMPM

Compare match

LL_LPTIM_ISR_CMPOK

Compare register update OK

LL_LPTIM_ISR_ARRM

Autoreload match

LL_LPTIM_ISR_EXTTRIG

External trigger edge event

LL_LPTIM_ISR_ARROK

Autoreload register update OK

LL_LPTIM_ISR_UP

Counter direction change down to up

LL_LPTIM_ISR_DOWN

Counter direction change up to down

IT Defines

LL_LPTIM_IER_CMPMIE

Compare match

LL_LPTIM_IER_CMPOKIE

Compare register update OK

LL_LPTIM_IER_ARRMIE

Autoreload match

LL_LPTIM_IER_EXTTRIGIE

External trigger edge event

LL_LPTIM_IER_ARROKIE

Autoreload register update OK

LL_LPTIM_IER_UPIE

Counter direction change down to up

LL_LPTIM_IER_DOWNIE

Counter direction change up to down

Operating Mode

LL_LPTIM_OPERATING_MODE_CONTINUOUS

LP Timer starts in continuous mode

LL_LPTIM_OPERATING_MODE_ONESHOT

LP Tilmer starts in single mode

Output Polarity

LL_LPTIM_OUTPUT_POLARITY_REGULAR

The LPTIM output reflects the compare results between LPTIMx_ARR and LPTIMx_CMP registers

LL_LPTIM_OUTPUT_POLARITY_INVERSE

The LPTIM output reflects the inverse of the compare results between LPTIMx_ARR and LPTIMx_CMP registers

Output Waveform Type

LL_LPTIM_OUTPUT_WAVEFORM_PWM

LPTIM generates either a PWM waveform or a One pulse waveform depending on chosen operating mode CONTINUOUS or SINGLE

LL_LPTIM_OUTPUT_WAVEFORM_SETONCE

LPTIM generates a Set Once waveform

Prescaler Value

LL_LPTIM_PRESCALER_DIV1

Prescaler division factor is set to 1

LL_LPTIM_PRESCALER_DIV2

Prescaler division factor is set to 2

LL_LPTIM_PRESCALER_DIV4

Prescaler division factor is set to 4

LL_LPTIM_PRESCALER_DIV8

Prescaler division factor is set to 8

LL_LPTIM_PRESCALER_DIV16

Prescaler division factor is set to 16

LL_LPTIM_PRESCALER_DIV32

Prescaler division factor is set to 32

LL_LPTIM_PRESCALER_DIV64

Prescaler division factor is set to 64

LL_LPTIM_PRESCALER_DIV128

Prescaler division factor is set to 128

Trigger Filter

LL_LPTIM_TRIG_FILTER_NONE

Any trigger active level change is considered as a valid trigger

LL_LPTIM_TRIG_FILTER_2

Trigger active level change must be stable for at least 2 clock periods before it is considered as valid trigger

LL_LPTIM_TRIG_FILTER_4

Trigger active level change must be stable for at least 4 clock periods before it is considered as valid trigger

LL_LPTIM_TRIG_FILTER_8

Trigger active level change must be stable for at least 8 clock periods before it is considered as valid trigger

Trigger Polarity

LL_LPTIM_TRIG_POLARITY_RISING

LPTIM counter starts when a rising edge is detected

LL_LPTIM_TRIG_POLARITY_FALLING

LPTIM counter starts when a falling edge is detected

LL_LPTIM_TRIG_POLARITY_RISING_FALLING

LPTIM counter starts when a rising or a falling edge is detected

Trigger Source

LL_LPTIM_TRIG_SOURCE_GPIO

External input trigger is connected to TIMx_ETR input

LL_LPTIM_TRIG_SOURCE_RTCALARMA

External input trigger is connected to RTC Alarm A

LL_LPTIM_TRIG_SOURCE_RTCALARMB

External input trigger is connected to RTC Alarm B

LL_LPTIM_TRIG_SOURCE_RTCTAMP1

External input trigger is connected to RTC Tamper 1

LL_LPTIM_TRIG_SOURCE_RTCTAMP2

External input trigger is connected to RTC Tamper 2

LL_LPTIM_TRIG_SOURCE_RTCTAMP3

External input trigger is connected to RTC Tamper 3

LL_LPTIM_TRIG_SOURCE_COMP1

External input trigger is connected to COMP1 output

LL_LPTIM_TRIG_SOURCE_COMP2

External input trigger is connected to COMP2 output

LL_LPTIM_TRIG_SOURCE_LPTIM2

External input trigger is connected to LPTIM2 output

LL_LPTIM_TRIG_SOURCE_LPTIM3

External input trigger is connected to LPTIM3 output

LL_LPTIM_TRIG_SOURCE_LPTIM4

External input trigger is connected to LPTIM4 output

LL_LPTIM_TRIG_SOURCE_LPTIM5

External input trigger is connected to LPTIM5 output

LL_LPTIM_TRIG_SOURCE_SAI1_FS_A

External input trigger is connected to SAI1 FS A output

LL_LPTIM_TRIG_SOURCE_SAI1_FS_B

External input trigger is connected to SAI1 FS B output

LL_LPTIM_TRIG_SOURCE_SAI2_FS_A

External input trigger is connected to SAI2 FS A output

LL_LPTIM_TRIG_SOURCE_SAI2_FS_B

External input trigger is connected to SAI2 FS B output

LL_LPTIM_TRIG_SOURCE_SAI4_FS_A

External input trigger is connected to SAI4 FS A output

LL_LPTIM_TRIG_SOURCE_SAI4_FS_B

External input trigger is connected to SAI4 FS B output

LL_LPTIM_TRIG_SOURCE_DFSDM2_BRK

External input trigger is connected to DFSDM2_BRK[0]

Update Mode

LL_LPTIM_UPDATE_MODE_IMMEDIATE

Preload is disabled: registers are updated after each APB bus write access

LL_LPTIM_UPDATE_MODE_ENDOFPERIOD

preload is enabled: registers are updated at the end of the current LPTIM period

Common Write and read registers Macros

LL_LPTIM_WriteReg

Description:

- Write a value in LPTIM register.

Parameters:

- __INSTANCE__: LPTIM Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_LPTIM_ReadReg

Description:

- Read a value in LPTIM register.

Parameters:

- __INSTANCE__: LPTIM Instance
- __REG__: Register to be read

Return value:

- Register: value

116 LL LPUART Generic Driver

116.1 LPUART Firmware driver registers structures

116.1.1 LL_LPUART_InitTypeDef

LL_LPUART_InitTypeDef is defined in the stm32h7xx_ll_lpuart.h

Data Fields

- ***uint32_t PrescalerValue***
- ***uint32_t BaudRate***
- ***uint32_t DataWidth***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t TransferDirection***
- ***uint32_t HardwareFlowControl***

Field Documentation

- ***uint32_t LL_LPUART_InitTypeDef::PrescalerValue***

  Specifies the Prescaler to compute the communication baud rate. This parameter can be a value of ***LPUART_LL_EC_PRESCALER***.This feature can be modified afterwards using unitary function **LL_LPUART_SetPrescaler()**.
- ***uint32_t LL_LPUART_InitTypeDef::BaudRate***

  This field defines expected LPUART communication baud rate.This feature can be modified afterwards using unitary function **LL_LPUART_SetBaudRate()**.
- ***uint32_t LL_LPUART_InitTypeDef::DataWidth***

  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***LPUART_LL_EC_DATAWIDTH***.This feature can be modified afterwards using unitary function **LL_LPUART_SetDataWidth()**.
- ***uint32_t LL_LPUART_InitTypeDef::StopBits***

  Specifies the number of stop bits transmitted. This parameter can be a value of ***LPUART_LL_EC_STOPBITS***.This feature can be modified afterwards using unitary function **LL_LPUART_SetStopBitsLength()**.
- ***uint32_t LL_LPUART_InitTypeDef::Parity***

  Specifies the parity mode. This parameter can be a value of ***LPUART_LL_EC_PARITY***.This feature can be modified afterwards using unitary function **LL_LPUART_SetParity()**.
- ***uint32_t LL_LPUART_InitTypeDef::TransferDirection***

  Specifies whether the Receive and/or Transmit mode is enabled or disabled. This parameter can be a value of ***LPUART_LL_EC_DIRECTION***.This feature can be modified afterwards using unitary function **LL_LPUART_SetTransferDirection()**.
- ***uint32_t LL_LPUART_InitTypeDef::HardwareFlowControl***

  Specifies whether the hardware flow control mode is enabled or disabled. This parameter can be a value of ***LPUART_LL_EC_HWCONTROL***.This feature can be modified afterwards using unitary function **LL_LPUART_SetHWFlowCtrl()**.

116.2 LPUART Firmware driver API description

The following section lists the various functions of the LPUART library.

116.2.1 Detailed description of functions

LL_LPUART_Enable

Function name

__STATIC_INLINE void LL_LPUART_Enable (USART_TypeDef * LPUARTx)

Function description

LPUART Enable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UE LL_LPUART_Enable

LL_LPUART_Disable

Function name

__STATIC_INLINE void LL_LPUART_Disable (USART_TypeDef * LPUARTx)

Function description

LPUART Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When LPUART is disabled, LPUART prescalers and outputs are stopped immediately, and current operations are discarded. The configuration of the LPUART is kept, but all the status flags, in the LPUARTx_ISR are set to their default values.
- In order to go into low-power mode without generating errors on the line, the TE bit must be reset before and the software must wait for the TC bit in the LPUART_ISR to be set before resetting the UE bit. The DMA requests are also reset when UE = 0 so the DMA channel must be disabled before resetting the UE bit.

Reference Manual to LL API cross reference:

- CR1 UE LL_LPUART_Disable

LL_LPUART_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabled (const USART_TypeDef * LPUARTx)

Function description

Indicate if LPUART is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UE LL_LPUART_IsEnabled

LL_LPUART_EnableFIFO

Function name

__STATIC_INLINE void LL_LPUART_EnableFIFO (USART_TypeDef * LPUARTx)

Function description

FIFO Mode Enable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_LPUART_EnableFIFO

LL_LPUART_DisableFIFO

Function name

__STATIC_INLINE void LL_LPUART_DisableFIFO (USART_TypeDef * LPUARTx)

Function description

FIFO Mode Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_LPUART_DisableFIFO

LL_LPUART_IsEnabledFIFO

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledFIFO (const USART_TypeDef * LPUARTx)

Function description

Indicate if FIFO Mode is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_LPUART_IsEnabledFIFO

LL_LPUART_SetTXFIFOThreshold

Function name

__STATIC_INLINE void LL_LPUART_SetTXFIFOThreshold (USART_TypeDef * LPUARTx, uint32_t Threshold)

Function description

Configure TX FIFO Threshold.

Parameters

- **LPUARTx:** LPUART Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_LPUART_SetTXFIFOThreshold

LL_LPUART_GetTXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTXFIFOThreshold (const USART_TypeDef * LPUARTx)

Function description

Return TX FIFO Threshold Configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_LPUART_GetTXFIFOThreshold

LL_LPUART_SetRXFIFOThreshold

Function name

__STATIC_INLINE void LL_LPUART_SetRXFIFOThreshold (USART_TypeDef * LPUARTx, uint32_t Threshold)

Function description

Configure RX FIFO Threshold.

Parameters

- **LPUARTx:** LPUART Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_LPUART_SetRXFIFOThreshold

LL_LPUART_GetRXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetRXFIFOThreshold (const USART_TypeDef * LPUARTx)

Function description

Return RX FIFO Threshold Configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_LPUART_GetRXFIFOThreshold

LL_LPUART_ConfigFIFOsThreshold

Function name

__STATIC_INLINE void LL_LPUART_ConfigFIFOsThreshold (USART_TypeDef * LPUARTx, uint32_t TXThreshold, uint32_t RXThreshold)

Function description

Configure TX and RX FIFOs Threshold.

Parameters

- **LPUARTx:** LPUART Instance
- **TXThreshold:** This parameter can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8
- **RXThreshold:** This parameter can be one of the following values:
  - LL_LPUART_FIFOTHRESHOLD_1_8
  - LL_LPUART_FIFOTHRESHOLD_1_4
  - LL_LPUART_FIFOTHRESHOLD_1_2
  - LL_LPUART_FIFOTHRESHOLD_3_4
  - LL_LPUART_FIFOTHRESHOLD_7_8
  - LL_LPUART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_LPUART_ConfigFIFOsThreshold
- CR3 RXFTCFG LL_LPUART_ConfigFIFOsThreshold

LL_LPUART_EnableInStopMode

Function name

__STATIC_INLINE void LL_LPUART_EnableInStopMode (USART_TypeDef * LPUARTx)

Function description

LPUART enabled in STOP Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When this function is enabled, LPUART is able to wake up the MCU from Stop mode, provided that LPUART clock selection is HSI or LSE in RCC.

Reference Manual to LL API cross reference:

- CR1 UESM LL_LPUART_EnableInStopMode

LL_LPUART_DisableInStopMode

Function name

__STATIC_INLINE void LL_LPUART_DisableInStopMode (USART_TypeDef * LPUARTx)

Function description

LPUART disabled in STOP Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When this function is disabled, LPUART is not able to wake up the MCU from Stop mode

Reference Manual to LL API cross reference:

- CR1 UESM LL_LPUART_DisableInStopMode

LL_LPUART_IsEnabledInStopMode

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledInStopMode (const USART_TypeDef * LPUARTx)

Function description

Indicate if LPUART is enabled in STOP Mode (able to wake up MCU from Stop mode or not)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UESM LL_LPUART_IsEnabledInStopMode

LL_LPUART_EnableDirectionRx

Function name

__STATIC_INLINE void LL_LPUART_EnableDirectionRx (USART_TypeDef * LPUARTx)

Function description

Receiver Enable (Receiver is enabled and begins searching for a start bit)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_EnableDirectionRx

LL_LPUART_DisableDirectionRx

Function name

__STATIC_INLINE void LL_LPUART_DisableDirectionRx (USART_TypeDef * LPUARTx)

Function description

Receiver Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_DisableDirectionRx

LL_LPUART_EnableDirectionTx

Function name

__STATIC_INLINE void LL_LPUART_EnableDirectionTx (USART_TypeDef * LPUARTx)

Function description

Transmitter Enable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_LPUART_EnableDirectionTx

LL_LPUART_DisableDirectionTx

Function name

__STATIC_INLINE void LL_LPUART_DisableDirectionTx (USART_TypeDef * LPUARTx)

Function description

Transmitter Disable.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_LPUART_DisableDirectionTx

LL_LPUART_SetTransferDirection

Function name

__STATIC_INLINE void LL_LPUART_SetTransferDirection (USART_TypeDef * LPUARTx, uint32_t TransferDirection)

Function description

Configure simultaneously enabled/disabled states of Transmitter and Receiver.

Parameters

- **LPUARTx:** LPUART Instance
- **TransferDirection:** This parameter can be one of the following values:
  - LL_LPUART_DIRECTION_NONE
  - LL_LPUART_DIRECTION_RX
  - LL_LPUART_DIRECTION_TX
  - LL_LPUART_DIRECTION_TX_RX

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_SetTransferDirection
- CR1 TE LL_LPUART_SetTransferDirection

LL_LPUART_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTransferDirection (const USART_TypeDef * LPUARTx)

Function description

Return enabled/disabled states of Transmitter and Receiver.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_DIRECTION_NONE
  - LL_LPUART_DIRECTION_RX
  - LL_LPUART_DIRECTION_TX
  - LL_LPUART_DIRECTION_TX_RX

Reference Manual to LL API cross reference:

- CR1 RE LL_LPUART_GetTransferDirection
- CR1 TE LL_LPUART_GetTransferDirection

LL_LPUART_SetParity

Function name

__STATIC_INLINE void LL_LPUART_SetParity (USART_TypeDef * LPUARTx, uint32_t Parity)

Function description

Configure Parity (enabled/disabled and parity mode if enabled)

Parameters

- **LPUARTx:** LPUART Instance
- **Parity:** This parameter can be one of the following values:
  - LL_LPUART_PARITY_NONE
  - LL_LPUART_PARITY_EVEN
  - LL_LPUART_PARITY_ODD

Return values

- **None:**

Notes

- This function selects if hardware parity control (generation and detection) is enabled or disabled. When the parity control is enabled (Odd or Even), computed parity bit is inserted at the MSB position (depending on data width) and parity is checked on the received data.

Reference Manual to LL API cross reference:

- CR1 PS LL_LPUART_SetParity
- CR1 PCE LL_LPUART_SetParity

LL_LPUART_GetParity

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetParity (const USART_TypeDef * LPUARTx)

Function description

Return Parity configuration (enabled/disabled and parity mode if enabled)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_PARITY_NONE
  - LL_LPUART_PARITY_EVEN
  - LL_LPUART_PARITY_ODD

Reference Manual to LL API cross reference:

- CR1 PS LL_LPUART_GetParity
- CR1 PCE LL_LPUART_GetParity

LL_LPUART_SetWakeUpMethod

Function name

__STATIC_INLINE void LL_LPUART_SetWakeUpMethod (USART_TypeDef * LPUARTx, uint32_t Method)

Function description

Set Receiver Wake Up method from Mute mode.

Parameters

- **LPUARTx:** LPUART Instance
- **Method:** This parameter can be one of the following values:
  - LL_LPUART_WAKEUP_IDLELINE
  - LL_LPUART_WAKEUP_ADDRESSMARK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 WAKE LL_LPUART_SetWakeUpMethod

LL_LPUART_GetWakeUpMethod

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetWakeUpMethod (const USART_TypeDef * LPUARTx)

Function description

Return Receiver Wake Up method from Mute mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_WAKEUP_IDLELINE
  - LL_LPUART_WAKEUP_ADDRESSMARK

Reference Manual to LL API cross reference:

- CR1 WAKE LL_LPUART_GetWakeUpMethod

LL_LPUART_SetDataWidth

Function name

__STATIC_INLINE void LL_LPUART_SetDataWidth (USART_TypeDef * LPUARTx, uint32_t DataWidth)

Function description

Set Word length (nb of data bits, excluding start and stop bits)

Parameters

- **LPUARTx:** LPUART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_LPUART_DATAWIDTH_7B
  - LL_LPUART_DATAWIDTH_8B
  - LL_LPUART_DATAWIDTH_9B

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 M LL_LPUART_SetDataWidth

LL_LPUART_GetDataWidth

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDataWidth (const USART_TypeDef * LPUARTx)

Function description

Return Word length (i.e.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_DATAWIDTH_7B
  - LL_LPUART_DATAWIDTH_8B
  - LL_LPUART_DATAWIDTH_9B

Reference Manual to LL API cross reference:

- CR1 M LL_LPUART_GetDataWidth

LL_LPUART_EnableMuteMode

Function name

__STATIC_INLINE void LL_LPUART_EnableMuteMode (USART_TypeDef * LPUARTx)

Function description

Allow switch between Mute Mode and Active mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_LPUART_EnableMuteMode

LL_LPUART_DisableMuteMode

Function name

__STATIC_INLINE void LL_LPUART_DisableMuteMode (USART_TypeDef * LPUARTx)

Function description

Prevent Mute Mode use.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_LPUART_DisableMuteMode

LL_LPUART_IsEnabledMuteMode

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledMuteMode (const USART_TypeDef * LPUARTx)

Function description

Indicate if switch between Mute Mode and Active mode is allowed.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 MME LL_LPUART_IsEnabledMuteMode

LL_LPUART_SetPrescaler

Function name

__STATIC_INLINE void LL_LPUART_SetPrescaler (USART_TypeDef * LPUARTx, uint32_t PrescalerValue)

Function description

Configure Clock source prescaler for baudrate generator and oversampling.

Parameters

- **LPUARTx:** LPUART Instance
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256

Return values

- **None:**

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_LPUART_SetPrescaler

LL_LPUART_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetPrescaler (const USART_TypeDef * LPUARTx)

Function description

Retrieve the Clock source prescaler for baudrate generator and oversampling.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_LPUART_GetPrescaler

LL_LPUART_SetStopBitsLength

Function name

__STATIC_INLINE void LL_LPUART_SetStopBitsLength (USART_TypeDef * LPUARTx, uint32_t StopBits)

Function description

Set the length of the stop bits.

Parameters

- **LPUARTx:** LPUART Instance
- **StopBits:** This parameter can be one of the following values:
  - LL_LPUART_STOPBITS_1
  - LL_LPUART_STOPBITS_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 STOP LL_LPUART_SetStopBitsLength

LL_LPUART_GetStopBitsLength

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetStopBitsLength (const USART_TypeDef * LPUARTx)

Function description

Retrieve the length of the stop bits.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_STOPBITS_1
  - LL_LPUART_STOPBITS_2

Reference Manual to LL API cross reference:

- CR2 STOP LL_LPUART_GetStopBitsLength

LL_LPUART_ConfigCharacter

Function name

__STATIC_INLINE void LL_LPUART_ConfigCharacter (USART_TypeDef * LPUARTx, uint32_t DataWidth, uint32_t Parity, uint32_t StopBits)

Function description

Configure Character frame format (Datawidth, Parity control, Stop Bits)

Parameters

- **LPUARTx:** LPUART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_LPUART_DATAWIDTH_7B
  - LL_LPUART_DATAWIDTH_8B
  - LL_LPUART_DATAWIDTH_9B
- **Parity:** This parameter can be one of the following values:
  - LL_LPUART_PARITY_NONE
  - LL_LPUART_PARITY_EVEN
  - LL_LPUART_PARITY_ODD
- **StopBits:** This parameter can be one of the following values:
  - LL_LPUART_STOPBITS_1
  - LL_LPUART_STOPBITS_2

Return values

- **None:**

Notes

- Call of this function is equivalent to following function call sequence : Data Width configuration using LL_LPUART_SetDataWidth() functionParity Control and mode configuration using LL_LPUART_SetParity() functionStop bits configuration using LL_LPUART_SetStopBitsLength() function

Reference Manual to LL API cross reference:

- CR1 M LL_LPUART_ConfigCharacter
- CR2 STOP LL_LPUART_ConfigCharacter

LL_LPUART_SetTXRXSwap

Function name

__STATIC_INLINE void LL_LPUART_SetTXRXSwap (USART_TypeDef * LPUARTx, uint32_t SwapConfig)

Function description

Configure TX/RX pins swapping setting.

Parameters

- **LPUARTx:** LPUART Instance
- **SwapConfig:** This parameter can be one of the following values:
  - LL_LPUART_TXRX_STANDARD
  - LL_LPUART_TXRX_SWAPPED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SWAP LL_LPUART_SetTXRXSwap

LL_LPUART_GetTXRXSwap

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTXRXSwap (const USART_TypeDef * LPUARTx)

Function description

Retrieve TX/RX pins swapping configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_TXRX_STANDARD
  - LL_LPUART_TXRX_SWAPPED

Reference Manual to LL API cross reference:

- CR2 SWAP LL_LPUART_GetTXRXSwap

LL_LPUART_SetRXPinLevel

Function name

__STATIC_INLINE void LL_LPUART_SetRXPinLevel (USART_TypeDef * LPUARTx, uint32_t PinInvMethod)

Function description

Configure RX pin active level logic.

Parameters

- **LPUARTx:** LPUART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_LPUART_RXPIN_LEVEL_STANDARD
  - LL_LPUART_RXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RXINV LL_LPUART_SetRXPinLevel

LL_LPUART_GetRXPinLevel

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetRXPinLevel (const USART_TypeDef * LPUARTx)

Function description

Retrieve RX pin active level logic configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_RXPIN_LEVEL_STANDARD
  - LL_LPUART_RXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 RXINV LL_LPUART_GetRXPinLevel

LL_LPUART_SetTXPinLevel

Function name

__STATIC_INLINE void LL_LPUART_SetTXPinLevel (USART_TypeDef * LPUARTx, uint32_t PinInvMethod)

Function description

Configure TX pin active level logic.

Parameters

- **LPUARTx:** LPUART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_LPUART_TXPIN_LEVEL_STANDARD
  - LL_LPUART_TXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 TXINV LL_LPUART_SetTXPinLevel

LL_LPUART_GetTXPinLevel

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTXPinLevel (const USART_TypeDef * LPUARTx)

Function description

Retrieve TX pin active level logic configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_TXPIN_LEVEL_STANDARD
  - LL_LPUART_TXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 TXINV LL_LPUART_GetTXPinLevel

LL_LPUART_SetBinaryDataLogic

Function name

__STATIC_INLINE void LL_LPUART_SetBinaryDataLogic (USART_TypeDef * LPUARTx, uint32_t DataLogic)

Function description

Configure Binary data logic.

Parameters

- **LPUARTx:** LPUART Instance
- **DataLogic:** This parameter can be one of the following values:
  - LL_LPUART_BINARY_LOGIC_POSITIVE
  - LL_LPUART_BINARY_LOGIC_NEGATIVE

Return values

- **None:**

Notes

- Allow to define how Logical data from the data register are send/received : either in positive/direct logic (1=H, 0=L) or in negative/inverse logic (1=L, 0=H)

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_LPUART_SetBinaryDataLogic

LL_LPUART_GetBinaryDataLogic

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetBinaryDataLogic (const USART_TypeDef * LPUARTx)

Function description

Retrieve Binary data configuration.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_BINARY_LOGIC_POSITIVE
  - LL_LPUART_BINARY_LOGIC_NEGATIVE

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_LPUART_GetBinaryDataLogic

LL_LPUART_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_LPUART_SetTransferBitOrder (USART_TypeDef * LPUARTx, uint32_t BitOrder)

Function description

Configure transfer bit order (either Less or Most Significant Bit First)

Parameters

- **LPUARTx:** LPUART Instance
- **BitOrder:** This parameter can be one of the following values:
  - LL_LPUART_BITORDER_LSBFIRST
  - LL_LPUART_BITORDER_MSBFIRST

Return values

- **None:**

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_LPUART_SetTransferBitOrder

LL_LPUART_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetTransferBitOrder (const USART_TypeDef * LPUARTx)

Function description

Return transfer bit order (either Less or Most Significant Bit First)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_BITORDER_LSBFIRST
  - LL_LPUART_BITORDER_MSBFIRST

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_LPUART_GetTransferBitOrder

LL_LPUART_ConfigNodeAddress

Function name

__STATIC_INLINE void LL_LPUART_ConfigNodeAddress (USART_TypeDef * LPUARTx, uint32_t AddressLen, uint32_t NodeAddress)

Function description

Set Address of the LPUART node.

Parameters

- **LPUARTx:** LPUART Instance
- **AddressLen:** This parameter can be one of the following values:
  - LL_LPUART_ADDRESS_DETECT_4B
  - LL_LPUART_ADDRESS_DETECT_7B
- **NodeAddress:** 4 or 7 bit Address of the LPUART node.

Return values

- **None:**

Notes

- This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with address mark detection.
- 4bits address node is used when 4-bit Address Detection is selected in ADDM7. (b7-b4 should be set to 0) 8bits address node is used when 7-bit Address Detection is selected in ADDM7. (This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with 7-bit address mark detection. The MSB of the character sent by the transmitter should be equal to 1. It may also be used for character detection during normal reception, Mute mode inactive (for example, end of block detection in ModBus protocol). In this case, the whole received character (8-bit) is compared to the ADD[7:0] value and CMF flag is set on match)

Reference Manual to LL API cross reference:

- CR2 ADD LL_LPUART_ConfigNodeAddress
- CR2 ADDM7 LL_LPUART_ConfigNodeAddress

LL_LPUART_GetNodeAddress

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetNodeAddress (const USART_TypeDef * LPUARTx)

Function description

Return 8 bit Address of the LPUART node as set in ADD field of CR2.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Address:** of the LPUART node (Value between Min_Data=0 and Max_Data=255)

Notes

- If 4-bit Address Detection is selected in ADDM7, only 4bits (b3-b0) of returned value are relevant (b31-b4 are not relevant) If 7-bit Address Detection is selected in ADDM7, only 8bits (b7-b0) of returned value are relevant (b31-b8 are not relevant)

Reference Manual to LL API cross reference:

- CR2 ADD LL_LPUART_GetNodeAddress

LL_LPUART_GetNodeAddressLen

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetNodeAddressLen (const USART_TypeDef * LPUARTx)

Function description

Return Length of Node Address used in Address Detection mode (7-bit or 4-bit)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_ADDRESS_DETECT_4B
  - LL_LPUART_ADDRESS_DETECT_7B

Reference Manual to LL API cross reference:

- CR2 ADDM7 LL_LPUART_GetNodeAddressLen

LL_LPUART_EnableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_EnableRTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Enable RTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_EnableRTSHWFlowCtrl

LL_LPUART_DisableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_DisableRTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Disable RTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_DisableRTSHWFlowCtrl

LL_LPUART_EnableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_EnableCTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Enable CTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSE LL_LPUART_EnableCTSHWFlowCtrl

LL_LPUART_DisableCTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_DisableCTSHWFlowCtrl (USART_TypeDef * LPUARTx)

Function description

Disable CTS HW Flow Control.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSE LL_LPUART_DisableCTSHWFlowCtrl

LL_LPUART_SetHWFlowCtrl

Function name

__STATIC_INLINE void LL_LPUART_SetHWFlowCtrl (USART_TypeDef * LPUARTx, uint32_t HardwareFlowControl)

Function description

Configure HW Flow Control mode (both CTS and RTS)

Parameters

- **LPUARTx:** LPUART Instance
- **HardwareFlowControl:** This parameter can be one of the following values:
  - LL_LPUART_HWCONTROL_NONE
  - LL_LPUART_HWCONTROL_RTS
  - LL_LPUART_HWCONTROL_CTS
  - LL_LPUART_HWCONTROL_RTS_CTS

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RTSE LL_LPUART_SetHWFlowCtrl
- CR3 CTSE LL_LPUART_SetHWFlowCtrl

LL_LPUART_GetHWFlowCtrl

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetHWFlowCtrl (const USART_TypeDef * LPUARTx)

Function description

Return HW Flow Control configuration (both CTS and RTS)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_HWCONTROL_NONE
  - LL_LPUART_HWCONTROL_RTS
  - LL_LPUART_HWCONTROL_CTS
  - LL_LPUART_HWCONTROL_RTS_CTS

Reference Manual to LL API cross reference:

LL_LPUART_EnableOverrunDetect

Function name

__STATIC_INLINE void LL_LPUART_EnableOverrunDetect (USART_TypeDef * LPUARTx)

Function description

Enable Overrun detection.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_LPUART_EnableOverrunDetect

LL_LPUART_DisableOverrunDetect

Function name

__STATIC_INLINE void LL_LPUART_DisableOverrunDetect (USART_TypeDef * LPUARTx)

Function description

Disable Overrun detection.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_LPUART_DisableOverrunDetect

LL_LPUART_IsEnabledOverrunDetect

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledOverrunDetect (const USART_TypeDef * LPUARTx)

Function description

Indicate if Overrun detection is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_LPUART_IsEnabledOverrunDetect

LL_LPUART_SetWKUPType

Function name

__STATIC_INLINE void LL_LPUART_SetWKUPType (USART_TypeDef * LPUARTx, uint32_t Type)

Function description

Select event type for Wake UP Interrupt Flag (WUS[1:0] bits)

Parameters

- **LPUARTx:** LPUART Instance
- **Type:** This parameter can be one of the following values:
  - LL_LPUART_WAKEUP_ON_ADDRESS
  - LL_LPUART_WAKEUP_ON_STARTBIT
  - LL_LPUART_WAKEUP_ON_RXNE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 WUS LL_LPUART_SetWKUPType

LL_LPUART_GetWKUPType

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetWKUPType (const USART_TypeDef * LPUARTx)

Function description

Return event type for Wake UP Interrupt Flag (WUS[1:0] bits)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_WAKEUP_ON_ADDRESS
  - LL_LPUART_WAKEUP_ON_STARTBIT
  - LL_LPUART_WAKEUP_ON_RXNE

Reference Manual to LL API cross reference:

- CR3 WUS LL_LPUART_GetWKUPType

LL_LPUART_SetBaudRate

Function name

__STATIC_INLINE void LL_LPUART_SetBaudRate (USART_TypeDef * LPUARTx, uint32_t PeriphClk, uint32_t PrescalerValue, uint32_t BaudRate)

Function description

Configure LPUART BRR register for achieving expected Baud Rate value.

Parameters

- **LPUARTx:** LPUART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256
- **BaudRate:** Baud Rate

Return values

- **None:**

Notes

- Compute and set LPUARTDIV value in BRR Register (full BRR content) according to used Peripheral Clock and expected Baud Rate values
- Peripheral clock and Baud Rate values provided as function parameters should be valid (Baud rate value != 0).
- Provided that LPUARTx_BRR must be > = 0x300 and LPUART_BRR is 20-bit, a care should be taken when generating high baud rates using high PeriphClk values. PeriphClk must be in the range [3 x BaudRate, 4096 x BaudRate].

Reference Manual to LL API cross reference:

- BRR BRR LL_LPUART_SetBaudRate

LL_LPUART_GetBaudRate

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetBaudRate (const USART_TypeDef * LPUARTx, uint32_t PeriphClk, uint32_t PrescalerValue)

Function description

Return current Baud Rate value, according to LPUARTDIV present in BRR register (full BRR content), and to used Peripheral Clock values.

Parameters

- **LPUARTx:** LPUART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256

Return values

- **Baud:** Rate

Notes

- In case of non-initialized or invalid value stored in BRR register, value 0 will be returned.

Reference Manual to LL API cross reference:

- BRR BRR LL_LPUART_GetBaudRate

LL_LPUART_EnableHalfDuplex

Function name

__STATIC_INLINE void LL_LPUART_EnableHalfDuplex (USART_TypeDef * LPUARTx)

Function description

Enable Single Wire Half-Duplex mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_LPUART_EnableHalfDuplex

LL_LPUART_DisableHalfDuplex

Function name

__STATIC_INLINE void LL_LPUART_DisableHalfDuplex (USART_TypeDef * LPUARTx)

Function description

Disable Single Wire Half-Duplex mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_LPUART_DisableHalfDuplex

LL_LPUART_IsEnabledHalfDuplex

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledHalfDuplex (const USART_TypeDef * LPUARTx)

Function description

Indicate if Single Wire Half-Duplex mode is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_LPUART_IsEnabledHalfDuplex

LL_LPUART_SetDEDeassertionTime

Function name

__STATIC_INLINE void LL_LPUART_SetDEDeassertionTime (USART_TypeDef * LPUARTx, uint32_t Time)

Function description

Set DEDT (Driver Enable De-Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **LPUARTx:** LPUART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 DEDT LL_LPUART_SetDEDeassertionTime

LL_LPUART_GetDEDeassertionTime

Function name

Function description

Set DEAT (Driver Enable Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **LPUARTx:** LPUART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 DEAT LL_LPUART_SetDEAssertionTime

LL_LPUART_GetDEAssertionTime

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDEAssertionTime (const USART_TypeDef * LPUARTx)

Function description

Return DEAT (Driver Enable Assertion Time)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : Time Value between Min_Data=0 and Max_Data=31

Reference Manual to LL API cross reference:

- CR1 DEAT LL_LPUART_GetDEAssertionTime

LL_LPUART_EnableDEMode

Function name

__STATIC_INLINE void LL_LPUART_EnableDEMode (USART_TypeDef * LPUARTx)

Function description

Enable Driver Enable (DE) Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DEM LL_LPUART_EnableDEMode

LL_LPUART_DisableDEMode

Function name

__STATIC_INLINE void LL_LPUART_DisableDEMode (USART_TypeDef * LPUARTx)

Function description

Disable Driver Enable (DE) Mode.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DEM LL_LPUART_DisableDEMode

LL_LPUART_IsEnabledDEMode

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDEMode (const USART_TypeDef * LPUARTx)

Function description

Indicate if Driver Enable (DE) Mode is enabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DEM LL_LPUART_IsEnabledDEMode

LL_LPUART_SetDESignalPolarity

Function name

__STATIC_INLINE void LL_LPUART_SetDESignalPolarity (USART_TypeDef * LPUARTx, uint32_t Polarity)

Function description

Select Driver Enable Polarity.

Parameters

- **LPUARTx:** LPUART Instance
- **Polarity:** This parameter can be one of the following values:
  - LL_LPUART_DE_POLARITY_HIGH
  - LL_LPUART_DE_POLARITY_LOW

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DEP LL_LPUART_SetDESignalPolarity

LL_LPUART_GetDESignalPolarity

Function name

__STATIC_INLINE uint32_t LL_LPUART_GetDESignalPolarity (const USART_TypeDef * LPUARTx)

Function description

Return Driver Enable Polarity.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_LPUART_DE_POLARITY_HIGH
  - LL_LPUART_DE_POLARITY_LOW

Reference Manual to LL API cross reference:

- CR3 DEP LL_LPUART_GetDESignalPolarity

LL_LPUART_IsActiveFlag_PE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_PE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Parity Error Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR PE LL_LPUART_IsActiveFlag_PE

LL_LPUART_IsActiveFlag_FE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_FE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Framing Error Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR FE LL_LPUART_IsActiveFlag_FE

LL_LPUART_IsActiveFlag_NE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_NE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Noise error detected Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR NE LL_LPUART_IsActiveFlag_NE

LL_LPUART_IsActiveFlag_ORE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_ORE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART OverRun Error Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ORE LL_LPUART_IsActiveFlag_ORE

LL_LPUART_IsActiveFlag_IDLE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_IDLE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART IDLE line detected Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR IDLE LL_LPUART_IsActiveFlag_IDLE

LL_LPUART_IsActiveFlag_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RXNE_RXFNE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Read Data Register or LPUART RX FIFO Not Empty Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXNE_RXFNE LL_LPUART_IsActiveFlag_RXNE_RXFNE

LL_LPUART_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TC (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmission Complete Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TC LL_LPUART_IsActiveFlag_TC

LL_LPUART_IsActiveFlag_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TXE_TXFNF (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmit Data Register Empty or LPUART TX FIFO Not Full Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXE_TXFNF LL_LPUART_IsActiveFlag_TXE_TXFNF

LL_LPUART_IsActiveFlag_nCTS

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_nCTS (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART CTS interrupt Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CTSIF LL_LPUART_IsActiveFlag_nCTS

LL_LPUART_IsActiveFlag_CTS

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_CTS (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART CTS Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CTS LL_LPUART_IsActiveFlag_CTS

LL_LPUART_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_BUSY (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Busy Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR BUSY LL_LPUART_IsActiveFlag_BUSY

LL_LPUART_IsActiveFlag_CM

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_CM (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Character Match Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMF LL_LPUART_IsActiveFlag_CM

LL_LPUART_IsActiveFlag_SBK

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_SBK (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Send Break Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SBKF LL_LPUART_IsActiveFlag_SBK

LL_LPUART_IsActiveFlag_RWU

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RWU (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Receive Wake Up from mute mode Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RWU LL_LPUART_IsActiveFlag_RWU

LL_LPUART_IsActiveFlag_WKUP

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_WKUP (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Wake Up from stop mode Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR WUF LL_LPUART_IsActiveFlag_WKUP

LL_LPUART_IsActiveFlag_TEACK

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TEACK (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Transmit Enable Acknowledge Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TEACK LL_LPUART_IsActiveFlag_TEACK

LL_LPUART_IsActiveFlag_REACK

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_REACK (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART Receive Enable Acknowledge Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR REACK LL_LPUART_IsActiveFlag_REACK

LL_LPUART_IsActiveFlag_TXFE

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TXFE (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX FIFO Empty Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXFE LL_LPUART_IsActiveFlag_TXFE

LL_LPUART_IsActiveFlag_RXFF

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RXFF (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART RX FIFO Full Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXFF LL_LPUART_IsActiveFlag_RXFF

LL_LPUART_IsActiveFlag_TXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_TXFT (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART TX FIFO Threshold Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXFT LL_LPUART_IsActiveFlag_TXFT

LL_LPUART_IsActiveFlag_RXFT

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsActiveFlag_RXFT (const USART_TypeDef * LPUARTx)

Function description

Check if the LPUART RX FIFO Threshold Flag is set or not.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXFT LL_LPUART_IsActiveFlag_RXFT

LL_LPUART_ClearFlag_PE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_PE (USART_TypeDef * LPUARTx)

Function description

Clear Parity Error Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR PECF LL_LPUART_ClearFlag_PE

LL_LPUART_ClearFlag_FE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_FE (USART_TypeDef * LPUARTx)

Function description

Clear Framing Error Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FECF LL_LPUART_ClearFlag_FE

LL_LPUART_ClearFlag_NE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_NE (USART_TypeDef * LPUARTx)

Function description

Clear Noise detected Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR NECF LL_LPUART_ClearFlag_NE

LL_LPUART_ClearFlag_ORE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_ORE (USART_TypeDef * LPUARTx)

Function description

Clear OverRun Error Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ORECF LL_LPUART_ClearFlag_ORE

LL_LPUART_ClearFlag_IDLE

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_IDLE (USART_TypeDef * LPUARTx)

Function description

Clear IDLE line detected Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR IDLECF LL_LPUART_ClearFlag_IDLE

LL_LPUART_ClearFlag_TC

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_TC (USART_TypeDef * LPUARTx)

Function description

Clear Transmission Complete Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TCCF LL_LPUART_ClearFlag_TC

LL_LPUART_ClearFlag_nCTS

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_nCTS (USART_TypeDef * LPUARTx)

Function description

Clear CTS Interrupt Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CTSCF LL_LPUART_ClearFlag_nCTS

LL_LPUART_ClearFlag_CM

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_CM (USART_TypeDef * LPUARTx)

Function description

Clear Character Match Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMCF LL_LPUART_ClearFlag_CM

LL_LPUART_ClearFlag_WKUP

Function name

__STATIC_INLINE void LL_LPUART_ClearFlag_WKUP (USART_TypeDef * LPUARTx)

Function description

Clear Wake Up from stop mode Flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR WUCF LL_LPUART_ClearFlag_WKUP

LL_LPUART_EnableIT_IDLE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_IDLE (USART_TypeDef * LPUARTx)

Function description

Enable IDLE Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_LPUART_EnableIT_IDLE

LL_LPUART_EnableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_RXNE_RXFNE (USART_TypeDef * LPUARTx)

Function description

Enable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_LPUART_EnableIT_RXNE_RXFNE

LL_LPUART_EnableIT_TC

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TC (USART_TypeDef * LPUARTx)

Function description

Enable Transmission Complete Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_LPUART_EnableIT_TC

LL_LPUART_EnableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TXE_TXFNF (USART_TypeDef * LPUARTx)

Function description

Enable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_LPUART_EnableIT_TXE_TXFNF

LL_LPUART_EnableIT_PE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_PE (USART_TypeDef * LPUARTx)

Function description

Enable Parity Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_LPUART_EnableIT_PE

LL_LPUART_EnableIT_CM

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_CM (USART_TypeDef * LPUARTx)

Function description

Enable Character Match Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_LPUART_EnableIT_CM

LL_LPUART_EnableIT_TXFE

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_TXFE (USART_TypeDef * LPUARTx)

Function description

Enable TX FIFO Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_LPUART_EnableIT_TXFE

LL_LPUART_EnableIT_RXFF

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_RXFF (USART_TypeDef * LPUARTx)

Function description

Enable RX FIFO Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_LPUART_EnableIT_RXFF

LL_LPUART_EnableIT_ERROR

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_ERROR (USART_TypeDef * LPUARTx)

Function description

Enable Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register). 0: Interrupt is inhibited1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_LPUART_EnableIT_ERROR

LL_LPUART_EnableIT_CTS

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_CTS (USART_TypeDef * LPUARTx)

Function description

Enable CTS Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_LPUART_EnableIT_CTS

LL_LPUART_EnableIT_WKUP

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_WKUP (USART_TypeDef * LPUARTx)

Function description

Enable Wake Up from Stop Mode Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 WUFIE LL_LPUART_EnableIT_WKUP

LL_LPUART_EnableIT_TXFT

Function name

Function description

Enable TX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_LPUART_EnableIT_TXFT

LL_LPUART_EnableIT_RXFT

Function name

__STATIC_INLINE void LL_LPUART_EnableIT_RXFT (USART_TypeDef * LPUARTx)

Function description

Enable RX FIFO Threshold Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_LPUART_EnableIT_RXFT

LL_LPUART_DisableIT_IDLE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_IDLE (USART_TypeDef * LPUARTx)

Function description

Disable IDLE Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_LPUART_DisableIT_IDLE

LL_LPUART_DisableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_RXNE_RXFNE (USART_TypeDef * LPUARTx)

Function description

Disable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_LPUART_DisableIT_RXNE_RXFNE

LL_LPUART_DisableIT_TC

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TC (USART_TypeDef * LPUARTx)

Function description

Disable Transmission Complete Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_LPUART_DisableIT_TC

LL_LPUART_DisableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TXE_TXFNF (USART_TypeDef * LPUARTx)

Function description

Disable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_LPUART_DisableIT_TXE_TXFNF

LL_LPUART_DisableIT_PE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_PE (USART_TypeDef * LPUARTx)

Function description

Disable Parity Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_LPUART_DisableIT_PE

LL_LPUART_DisableIT_CM

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_CM (USART_TypeDef * LPUARTx)

Function description

Disable Character Match Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_LPUART_DisableIT_CM

LL_LPUART_DisableIT_TXFE

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_TXFE (USART_TypeDef * LPUARTx)

Function description

Disable TX FIFO Empty Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_LPUART_DisableIT_TXFE

LL_LPUART_DisableIT_RXFF

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_RXFF (USART_TypeDef * LPUARTx)

Function description

Disable RX FIFO Full Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_LPUART_DisableIT_RXFF

LL_LPUART_DisableIT_ERROR

Function name

__STATIC_INLINE void LL_LPUART_DisableIT_ERROR (USART_TypeDef * LPUARTx)

Function description

Disable Error Interrupt.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register). 0: Interrupt is inhibited1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the LPUARTx_ISR register.

Function description

Check if LPUART RX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_LPUART_IsEnabledIT_RXFT

LL_LPUART_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_LPUART_EnableDMAReq_RX (USART_TypeDef * LPUARTx)

Function description

Enable DMA Mode for reception.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_LPUART_EnableDMAReq_RX

LL_LPUART_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_LPUART_DisableDMAReq_RX (USART_TypeDef * LPUARTx)

Function description

Disable DMA Mode for reception.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_LPUART_DisableDMAReq_RX

LL_LPUART_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDMAReq_RX (const USART_TypeDef * LPUARTx)

Function description

Check if DMA Mode is enabled for reception.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAR LL_LPUART_IsEnabledDMAReq_RX

LL_LPUART_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_LPUART_EnableDMAReq_TX (USART_TypeDef * LPUARTx)

Function description

Enable DMA Mode for transmission.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_LPUART_EnableDMAReq_TX

LL_LPUART_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_LPUART_DisableDMAReq_TX (USART_TypeDef * LPUARTx)

Function description

Disable DMA Mode for transmission.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_LPUART_DisableDMAReq_TX

LL_LPUART_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDMAReq_TX (const USART_TypeDef * LPUARTx)

Function description

Check if DMA Mode is enabled for transmission.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAT LL_LPUART_IsEnabledDMAReq_TX

LL_LPUART_EnableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_LPUART_EnableDMADeactOnRxErr (USART_TypeDef * LPUARTx)

Function description

Enable DMA Disabling on Reception Error.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_LPUART_EnableDMADeactOnRxErr

LL_LPUART_DisableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_LPUART_DisableDMADeactOnRxErr (USART_TypeDef * LPUARTx)

Function description

Disable DMA Disabling on Reception Error.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_LPUART_DisableDMADeactOnRxErr

LL_LPUART_IsEnabledDMADeactOnRxErr

Function name

__STATIC_INLINE uint32_t LL_LPUART_IsEnabledDMADeactOnRxErr (const USART_TypeDef * LPUARTx)

Function description

Indicate if DMA Disabling on Reception Error is disabled.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DDRE LL_LPUART_IsEnabledDMADeactOnRxErr

LL_LPUART_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_LPUART_DMA_GetRegAddr (const USART_TypeDef * LPUARTx, uint32_t Direction)

Function description

Get the LPUART data register address used for DMA transfer.

Parameters

- **LPUARTx:** LPUART Instance
- **Direction:** This parameter can be one of the following values:
  - LL_LPUART_DMA_REG_DATA_TRANSMIT
  - LL_LPUART_DMA_REG_DATA_RECEIVE

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- RDR RDR LL_LPUART_DMA_GetRegAddr
-
- TDR TDR LL_LPUART_DMA_GetRegAddr

LL_LPUART_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_LPUART_ReceiveData8 (const USART_TypeDef * LPUARTx)

Function description

Read Receiver Data register (Receive Data value, 8 bits)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** Value between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RDR RDR LL_LPUART_ReceiveData8

LL_LPUART_ReceiveData9

Function name

__STATIC_INLINE uint16_t LL_LPUART_ReceiveData9 (const USART_TypeDef * LPUARTx)

Function description

Read Receiver Data register (Receive Data value, 9 bits)

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **Time:** Value between Min_Data=0x00 and Max_Data=0x1FF

Reference Manual to LL API cross reference:

- RDR RDR LL_LPUART_ReceiveData9

LL_LPUART_TransmitData8

Function name

__STATIC_INLINE void LL_LPUART_TransmitData8 (USART_TypeDef * LPUARTx, uint8_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 8 bits)

Parameters

- **LPUARTx:** LPUART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_LPUART_TransmitData8

LL_LPUART_TransmitData9

Function name

__STATIC_INLINE void LL_LPUART_TransmitData9 (USART_TypeDef * LPUARTx, uint16_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 9 bits)

Parameters

- **LPUARTx:** LPUART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_LPUART_TransmitData9

LL_LPUART_RequestBreakSending

Function name

__STATIC_INLINE void LL_LPUART_RequestBreakSending (USART_TypeDef * LPUARTx)

Function description

Request Break sending.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR SBKRQ LL_LPUART_RequestBreakSending

LL_LPUART_RequestEnterMuteMode

Function name

__STATIC_INLINE void LL_LPUART_RequestEnterMuteMode (USART_TypeDef * LPUARTx)

Function description

Put LPUART in mute mode and set the RWU flag.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR MMRQ LL_LPUART_RequestEnterMuteMode

LL_LPUART_RequestRxDataFlush

Function name

__STATIC_INLINE void LL_LPUART_RequestRxDataFlush (USART_TypeDef * LPUARTx)

Function description

Request a Receive Data and FIFO flush.

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **None:**

Notes

- Allows to discard the received data without reading them, and avoid an overrun condition.

Reference Manual to LL API cross reference:

- RQR RXFRQ LL_LPUART_RequestRxDataFlush

LL_LPUART_DeInit

Function name

ErrorStatus LL_LPUART_DeInit (const USART_TypeDef * LPUARTx)

Function description

De-initialize LPUART registers (Registers restored to their default values).

Parameters

- **LPUARTx:** LPUART Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPUART registers are de-initialized
  - ERROR: not applicable

LL_LPUART_Init

Function name

ErrorStatus LL_LPUART_Init (USART_TypeDef * LPUARTx, const LL_LPUART_InitTypeDef * LPUART_InitStruct)

Function description

Initialize LPUART registers according to the specified parameters in LPUART_InitStruct.

Parameters

- **LPUARTx:** LPUART Instance
- **LPUART_InitStruct:** pointer to a LL_LPUART_InitTypeDef structure that contains the configuration information for the specified LPUART peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: LPUART registers are initialized according to LPUART_InitStruct content
  - ERROR: Problem occurred during LPUART Registers initialization

Notes

- As some bits in LPUART configuration registers can only be written when the LPUART is disabled (USART_CR1_UE bit =0), LPUART Peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.
- Baud rate value stored in LPUART_InitStruct BaudRate field, should be valid (different from 0).

LL_LPUART_StructInit

Function name

void LL_LPUART_StructInit (LL_LPUART_InitTypeDef * LPUART_InitStruct)

Function description

Set each LL_LPUART_InitTypeDef field to default value.

Parameters

- **LPUART_InitStruct:** pointer to a LL_LPUART_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

116.3 LPUART Firmware driver defines

The following section lists the various define and macros of the module.

116.3.1 LPUART

LPUART

Address Length Detection

LL_LPUART_ADDRESS_DETECT_4B

4-bit address detection method selected

LL_LPUART_ADDRESS_DETECT_7B

7-bit address detection (in 8-bit data mode) method selected

Binary Data Inversion

LL_LPUART_BINARY_LOGIC_POSITIVE

Logical data from the data register are send/received in positive/direct logic. (1=H, 0=L)

LL_LPUART_BINARY_LOGIC_NEGATIVE

Logical data from the data register are send/received in negative/inverse logic. (1=L, 0=H). The parity bit is also inverted.

Bit Order

LL_LPUART_BITORDER_LSBFIRST

data is transmitted/received with data bit 0 first, following the start bit

LL_LPUART_BITORDER_MSBFIRST

data is transmitted/received with the MSB first, following the start bit

Clear Flags Defines

LL_LPUART_ICR_PECF

Parity error clear flag

LL_LPUART_ICR_FECF

Framing error clear flag

LL_LPUART_ICR_NCF

Noise error detected clear flag

LL_LPUART_ICR_ORECF

Overrun error clear flag

LL_LPUART_ICR_IDLECF

Idle line detected clear flag

LL_LPUART_ICR_TCCF

Transmission complete clear flag

LL_LPUART_ICR_CTSCF

CTS clear flag

LL_LPUART_ICR_CMCF

Character match clear flag

LL_LPUART_ICR_WUCF

Wakeup from Stop mode clear flag

Datawidth

LL_LPUART_DATAWIDTH_7B

7 bits word length : Start bit, 7 data bits, n stop bits

LL_LPUART_DATAWIDTH_8B

8 bits word length : Start bit, 8 data bits, n stop bits

LL_LPUART_DATAWIDTH_9B

9 bits word length : Start bit, 9 data bits, n stop bits

Driver Enable Polarity

LL_LPUART_DE_POLARITY_HIGH

DE signal is active high

LL_LPUART_DE_POLARITY_LOW

DE signal is active low

Direction

LL_LPUART_DIRECTION_NONE

Transmitter and Receiver are disabled

LL_LPUART_DIRECTION_RX

Transmitter is disabled and Receiver is enabled

LL_LPUART_DIRECTION_TX

Transmitter is enabled and Receiver is disabled

LL_LPUART_DIRECTION_TX_RX

Transmitter and Receiver are enabled

DMA Register Data

LL_LPUART_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_LPUART_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

FIFO Threshold

LL_LPUART_FIFOTHRESHOLD_1_8

FIFO reaches 1/8 of its depth

LL_LPUART_FIFOTHRESHOLD_1_4

FIFO reaches 1/4 of its depth

LL_LPUART_FIFOTHRESHOLD_1_2

FIFO reaches 1/2 of its depth

LL_LPUART_FIFOTHRESHOLD_3_4

FIFO reaches 3/4 of its depth

LL_LPUART_FIFOTHRESHOLD_7_8

FIFO reaches 7/8 of its depth

LL_LPUART_FIFOTHRESHOLD_8_8

FIFO becomes empty for TX and full for RX

Get Flags Defines

LL_LPUART_ISR_PE

Parity error flag

LL_LPUART_ISR_FE

Framing error flag

LL_LPUART_ISR_NE

Noise detected flag

LL_LPUART_ISR_ORE

Overrun error flag

LL_LPUART_ISR_IDLE

Idle line detected flag

LL_LPUART_ISR_RXNE_RXFNE

Read data register or RX FIFO not empty flag

LL_LPUART_ISR_TC

Transmission complete flag

LL_LPUART_ISR_TXE_TXFNF

Transmit data register empty or TX FIFO Not Full flag

LL_LPUART_ISR_CTSIF

CTS interrupt flag

LL_LPUART_ISR_CTS

CTS flag

LL_LPUART_ISR_BUSY

Busy flag

LL_LPUART_ISR_CMF

Character match flag

LL_LPUART_ISR_SBKF

Send break flag

LL_LPUART_ISR_RWU

Receiver wakeup from Mute mode flag

LL_LPUART_ISR_WUF

Wakeup from Stop mode flag

LL_LPUART_ISR_TEACK

Transmit enable acknowledge flag

LL_LPUART_ISR_REACK

Receive enable acknowledge flag

LL_LPUART_ISR_TXFE

TX FIFO empty flag

LL_LPUART_ISR_RXFF

RX FIFO full flag

LL_LPUART_ISR_RXFT

RX FIFO threshold flag

LL_LPUART_ISR_TXFT

TX FIFO threshold flag

Hardware Control

LL_LPUART_HWCONTROL_NONE

CTS and RTS hardware flow control disabled

LL_LPUART_HWCONTROL_RTS

RTS output enabled, data is only requested when there is space in the receive buffer

LL_LPUART_HWCONTROL_CTS

CTS mode enabled, data is only transmitted when the nCTS input is asserted (tied to 0)

LL_LPUART_HWCONTROL_RTS_CTS

CTS and RTS hardware flow control enabled

IT Defines

LL_LPUART_CR1_IDLEIE

IDLE interrupt enable

LL_LPUART_CR1_RXNEIE_RXFNEIE

Read data register and RXFIFO not empty interrupt enable

LL_LPUART_CR1_TCIE

Transmission complete interrupt enable

LL_LPUART_CR1_TXEIE_TXFNFIE

Transmit data register empty and TX FIFO not full interrupt enable

LL_LPUART_CR1_PEIE

Parity error

LL_LPUART_CR1_CMIE

Character match interrupt enable

LL_LPUART_CR1_TXFEIE

TX FIFO empty interrupt enable

LL_LPUART_CR1_RXFFIE

RX FIFO full interrupt enable

LL_LPUART_CR3_EIE

Error interrupt enable

LL_LPUART_CR3_CTSIE

CTS interrupt enable

LL_LPUART_CR3_WUFIE

Wakeup from Stop mode interrupt enable

LL_LPUART_CR3_TXFTIE

TX FIFO threshold interrupt enable

LL_LPUART_CR3_RXFTIE

RX FIFO threshold interrupt enable

Parity Control

LL_LPUART_PARITY_NONE

Parity control disabled

LL_LPUART_PARITY_EVEN

Parity control enabled and Even Parity is selected

LL_LPUART_PARITY_ODD

Parity control enabled and Odd Parity is selected

Clock Source Prescaler

LL_LPUART_PRESCALER_DIV1

Input clock not divided

LL_LPUART_PRESCALER_DIV2

Input clock divided by 2

LL_LPUART_PRESCALER_DIV4

Input clock divided by 4

LL_LPUART_PRESCALER_DIV6

Input clock divided by 6

LL_LPUART_PRESCALER_DIV8

Input clock divided by 8

LL_LPUART_PRESCALER_DIV10

Input clock divided by 10

LL_LPUART_PRESCALER_DIV12

Input clock divided by 12

LL_LPUART_PRESCALER_DIV16

Input clock divided by 16

LL_LPUART_PRESCALER_DIV32

Input clock divided by 32

LL_LPUART_PRESCALER_DIV64

Input clock divided by 64

LL_LPUART_PRESCALER_DIV128

Input clock divided by 128

LL_LPUART_PRESCALER_DIV256

Input clock divided by 256

RX Pin Active Level Inversion

LL_LPUART_RXPIN_LEVEL_STANDARD

RX pin signal works using the standard logic levels

LL_LPUART_RXPIN_LEVEL_INVERTED

RX pin signal values are inverted.

Stop Bits

LL_LPUART_STOPBITS_1

1 stop bit

LL_LPUART_STOPBITS_2

2 stop bits

TX Pin Active Level Inversion

LL_LPUART_TXPIN_LEVEL_STANDARD

TX pin signal works using the standard logic levels

LL_LPUART_TXPIN_LEVEL_INVERTED

TX pin signal values are inverted.

TX RX Pins Swap

LL_LPUART_TXRX_STANDARD

TX/RX pins are used as defined in standard pinout

LL_LPUART_TXRX_SWAPPED

TX and RX pins functions are swapped.

Wakeup

LL_LPUART_WAKEUP_IDLELINE

LPUART wake up from Mute mode on Idle Line

LL_LPUART_WAKEUP_ADDRESSMARK

LPUART wake up from Mute mode on Address Mark

Wakeup Activation

LL_LPUART_WAKEUP_ON_ADDRESS

Wake up active on address match

LL_LPUART_WAKEUP_ON_STARTBIT

Wake up active on Start bit detection

LL_LPUART_WAKEUP_ON_RXNE

Wake up active on RXNE

FLAG_Management

LL_LPUART_IsActiveFlag_RXNE

LL_LPUART_IsActiveFlag_TXE

IT_Management

LL_LPUART_EnableIT_RXNE

LL_LPUART_EnableIT_TXE

LL_LPUART_DisableIT_RXNE

LL_LPUART_DisableIT_TXE

LL_LPUART_IsEnabledIT_RXNE

LL_LPUART_IsEnabledIT_TXE

Helper Macros

__LL_LPUART_DIV

Description:

- Compute LPUARTDIV value according to Peripheral Clock and expected Baud Rate (20-bit value of LPUARTDIV is returned)

Parameters:

- __PERIPHCLK__: Peripheral Clock frequency used for LPUART Instance
- __PRESCALER__: This parameter can be one of the following values:
  - LL_LPUART_PRESCALER_DIV1
  - LL_LPUART_PRESCALER_DIV2
  - LL_LPUART_PRESCALER_DIV4
  - LL_LPUART_PRESCALER_DIV6
  - LL_LPUART_PRESCALER_DIV8
  - LL_LPUART_PRESCALER_DIV10
  - LL_LPUART_PRESCALER_DIV12
  - LL_LPUART_PRESCALER_DIV16
  - LL_LPUART_PRESCALER_DIV32
  - LL_LPUART_PRESCALER_DIV64
  - LL_LPUART_PRESCALER_DIV128
  - LL_LPUART_PRESCALER_DIV256
- __BAUDRATE__: Baud Rate value to achieve

Return value:

- LPUARTDIV: value to be used for BRR register filling

Common Write and read registers Macros

LL_LPUART_WriteReg

Description:

- Write a value in LPUART register.

Parameters:

- __INSTANCE__: LPUART Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_LPUART_ReadReg

Description:

- Read a value in LPUART register.

Parameters:

- __INSTANCE__: LPUART Instance
- __REG__: Register to be read

Return value:

- Register: value

117 LL MDMA Generic Driver

117.1 MDMA Firmware driver registers structures

117.1.1 LL_MDMA_InitTypeDef

LL_MDMA_InitTypeDef is defined in the stm32h7xx_ll_mdma.h

Field Documentation

- ***uint32_t LL_MDMA_InitTypeDef::SrcAddress***

  Specifies the transfer source address This parameter must be a value between Min_Data = 0 and Max_Data = 0xFFFFFFFF. This feature can be modified afterwards using unitary function **LL_MDMA_SetSourceAddress()**

- ***uint32_t LL_MDMA_InitTypeDef::DstAddress***

  Specifies the transfer destination address This parameter must be a value between Min_Data = 0 and Max_Data = 0xFFFFFFFF. This feature can be modified afterwards using unitary function **LL_MDMA_SetDestinationAddress()**
- ***uint32_t LL_MDMA_InitTypeDef::RequestMode***

  Specifies the request mode Hardware or Software. This parameter can be a value of ***MDMA_LL_EC_REQUEST_MODE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetRequestMode()**
- ***uint32_t LL_MDMA_InitTypeDef::TriggerMode***

  Specifies the transfer trigger mode. This parameter can be a value of ***MDMA_LL_EC_TRIGGER_MODE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetTriggerMode()**
- ***uint32_t LL_MDMA_InitTypeDef::HWTrigger***

  Specifies the HW transfer trigger used when RequestMode is HW. This parameter can be a value of ***MDMA_LL_EC_HW_TRIGGER_SELCTION*** This feature can be modified afterwards using unitary function **LL_MDMA_SetHWTrigger()**
- ***uint32_t LL_MDMA_InitTypeDef::BlockDataLength***

  Specifies the length of a block transfer in bytes This parameter must be a value between Min_Data = 0 and Max_Data = 0x00010000. This feature can be modified afterwards using unitary function **LL_MDMA_SetBlkDataLength()**
- ***uint32_t LL_MDMA_InitTypeDef::BlockRepeatCount***

  Specifies the Block Repeat Count This parameter must be a value between Min_Data = 0 and Max_Data = 0x00000FFF. This feature can be modified afterwards using unitary function **LL_MDMA_SetBlkRepeatCount()**
- ***uint32_t LL_MDMA_InitTypeDef::BlockRepeatDestAddrUpdateMode***

  Specifies the block repeat destination address update mode. This parameter can be a value of ***MDMA_LL_EC_BLK_RPT_DEST_ADDR_UPDATE_MODE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetBlkRepeatDestAddrUpdate()**
- ***uint32_t LL_MDMA_InitTypeDef::BlockRepeatSrcAddrUpdateMode***

  Specifies the block repeat source address update mode. This parameter can be a value of ***MDMA_LL_EC_SRC_BLK_RPT_ADDR_UPDATE_MODE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetBlkRepeatSrcAddrUpdate()**
- ***uint32_t LL_MDMA_InitTypeDef::BlockRepeatDestAddrUpdateVal***

  Specifies the block repeat destination address update value. This parameter can be a value Between 0 to 0x0000FFFF This feature can be modified afterwards using unitary function **LL_MDMA_SetBlkRptDestAddrUpdateValue()**
- ***uint32_t LL_MDMA_InitTypeDef::BlockRepeatSrcAddrUpdateVal***

  Specifies the block repeat source address update value. This parameter can be a value Between 0 to 0x0000FFFF This feature can be modified afterwards using unitary function **LL_MDMA_SetBlkRptSrcAddrUpdateValue()**
- ***uint32_t LL_MDMA_InitTypeDef::LinkAddress***

  Specifies the linked list next transfer node address. This parameter can be a value Between 0 to 0xFFFFFFFF This feature can be modified afterwards using unitary function **LL_MDMA_SetLinkAddress()**
- ***uint32_t LL_MDMA_InitTypeDef::WordEndianess***

  Specifies the Word transfer endianness This parameter can be a value of ***MDMA_LL_EC_WORD_ENDIANNESS***. This feature can be modified afterwards using unitary function **LL_MDMA_SetWordEndianness()**
- ***uint32_t LL_MDMA_InitTypeDef::HalfWordEndianess***

  Specifies the Half Word transfer endianness This parameter can be a value of ***MDMA_LL_EC_HALFWORD_ENDIANNESS***. This feature can be modified afterwards using unitary function **LL_MDMA_SetHalfWordEndianness()**
- ***uint32_t LL_MDMA_InitTypeDef::ByteEndianess***

  Specifies the Byte transfer endianness This parameter can be a value of ***MDMA_LL_EC_BYTE_ENDIANNESS***. This feature can be modified afterwards using unitary function **LL_MDMA_SetByteEndianness()**

- ***uint32_t LL_MDMA_InitTypeDef::Priority***

  Specifies the channel priority level. This parameter can be a value of ***MDMA_LL_EC_PRIORITY*** This feature can be modified afterwards using unitary function **LL_MDMA_SetChannelPriorityLevel()**
- ***uint32_t LL_MDMA_InitTypeDef::BufferableWriteMode***

  Specifies the transfer Bufferable Write Mode. This parameter can be a value of ***MDMA_LL_EC_BUFF_WRITE_MODE*** This feature can be modified afterwards using unitary function **LL_MDMA_EnableBufferableWrMode()** and LL_MDMA_DisableBufferableWrMode
- ***uint32_t LL_MDMA_InitTypeDef::PaddingAlignment***

  Specifies the transfer Padding and Alignment. This parameter can be a value of ***MDMA_LL_EC_PADDING_ALIGNMENT_MODE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetPaddingAlignment()**
- ***uint32_t LL_MDMA_InitTypeDef::PackMode***

  Specifies the transfer Packing enabled or disabled. This parameter can be a value of ***MDMA_LL_EC_PACKING_MODE*** This feature can be modified afterwards using unitary function **LL_MDMA_EnablePacking()** and **LL_MDMA_DisablePacking()**
- ***uint32_t LL_MDMA_InitTypeDef::BufferTransferLength***

  Specifies the length of a buffer transfer in bytes This parameter must be a value between Min_Data = 0 and Max_Data = 0x0000007F. This feature can be modified afterwards using unitary function **LL_MDMA_SetBufferTransferLength()**
- ***uint32_t LL_MDMA_InitTypeDef::DestBurst***

  Specifies the destination burst size. This parameter can be a value of ***MDMA_LL_EC_DEST_BURST*** This feature can be modified afterwards using unitary function **LL_MDMA_SetDestinationBurstSize()**
- ***uint32_t LL_MDMA_InitTypeDef::SrctBurst***

  Specifies the source burst size. This parameter can be a value of ***MDMA_LL_EC_SRC_BURST*** This feature can be modified afterwards using unitary function **LL_MDMA_SetSourceBurstSize()**
- ***uint32_t LL_MDMA_InitTypeDef::DestIncSize***

  Specifies the destination increment size. This parameter can be a value of ***MDMA_LL_EC_DEST_INC_OFFSET_SIZE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetDestinationIncSize()**
- ***uint32_t LL_MDMA_InitTypeDef::SrcIncSize***

  Specifies the source increment size. This parameter can be a value of ***MDMA_LL_EC_SRC_INC_OFFSET_SIZE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetSourceIncSize()**
- ***uint32_t LL_MDMA_InitTypeDef::DestDataSize***

  Specifies the destination data size. This parameter can be a value of ***MDMA_LL_EC_DEST_DATA_SIZE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetDestinationDataSize()**
- ***uint32_t LL_MDMA_InitTypeDef::SrcDataSize***

  Specifies the source data size. This parameter can be a value of ***MDMA_LL_EC_SRC_DATA_SIZE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetSourceDataSize()**
- ***uint32_t LL_MDMA_InitTypeDef::DestIncMode***

  Specifies the destination increment mode. This parameter can be a value of ***MDMA_LL_EC_DEST_INC_MODE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetDestinationIncMode()**
- ***uint32_t LL_MDMA_InitTypeDef::SrcIncMode***

  Specifies the source increment mode. This parameter can be a value of ***MDMA_LL_EC_SRC_INC_MODE*** This feature can be modified afterwards using unitary function **LL_MDMA_SetSourceIncMode()**
- ***uint32_t LL_MDMA_InitTypeDef::DestBus***

  Specifies the destination transfer bus, System AXI or AHB/TCM bus. This parameter can be a value of ***MDMA_LL_EC_DEST_BUS*** This feature can be modified afterwards using unitary function **LL_MDMA_SetDestBusSelection()**
- ***uint32_t LL_MDMA_InitTypeDef::SrcBus***

  Specifies the source transfer bus, System AXI or AHB/TCM bus. This parameter can be a value of ***MDMA_LL_EC_SRC_BUS*** This feature can be modified afterwards using unitary function **LL_MDMA_SetSrcBusSelection()**

- ***uint32_t LL_MDMA_InitTypeDef::MaskAddress***

  Specifies the address to be updated (written) with MaskData after a request is served. MaskAddress and MaskData could be used to automatically clear a peripheral flag when the request is served This parameter can be a value Between 0 to 0xFFFFFFFF This feature can be modified afterwards using unitary function **LL_MDMA_SetMaskAddress()**
- ***uint32_t LL_MDMA_InitTypeDef::MaskData***

  Specifies the value to be written to MaskAddress after a request is served. MaskAddress and MaskData could be used to automatically clear a peripheral flag when the request is served This parameter can be a value Between 0 to 0xFFFFFFFF This feature can be modified afterwards using unitary function **LL_MDMA_SetMaskData()**

117.1.2 LL_MDMA_LinkNodeTypeDef

LL_MDMA_LinkNodeTypeDef is defined in the stm32h7xx_ll_mdma.h

Data Fields

- ***__IO uint32_t CTCR***
- ***__IO uint32_t CBNDTR***
- ***__IO uint32_t CSAR***
- ***__IO uint32_t CDAR***
- ***__IO uint32_t CBRUR***
- ***__IO uint32_t CLAR***
- ***__IO uint32_t CTBR***

Field Documentation

- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::CTCR***

  New CTCR register configuration for the given MDMA linked list node
- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::CBNDTR***

  New CBNDTR register configuration for the given MDMA linked list node
- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::CSAR***

  New CSAR register configuration for the given MDMA linked list node
- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::CDAR***

  New CDAR register configuration for the given MDMA linked list node
- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::CBRUR***

  New CBRUR register configuration for the given MDMA linked list node
- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::CLAR***

  New CLAR register configuration for the given MDMA linked list node
- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::CTBR***

  New CTBR register configuration for the given MDMA linked list node
- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::Reserved***

  Reserved register
- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::CMAR***

  New CMAR register configuration for the given MDMA linked list node
- ***__IO uint32_t LL_MDMA_LinkNodeTypeDef::CMDR***

  New CMDR register configuration for the given MDMA linked list node

117.2 MDMA Firmware driver API description

The following section lists the various functions of the MDMA library.

117.2.1 Detailed description of functions

LL_MDMA_EnableChannel

Function name

__STATIC_INLINE void LL_MDMA_EnableChannel (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Enable MDMA channel.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR EN LL_MDMA_EnableChannel

LL_MDMA_DisableChannel

Function name

__STATIC_INLINE void LL_MDMA_DisableChannel (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Disable MDMA channel.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR EN LL_MDMA_DisableChannel

LL_MDMA_IsEnabledChannel

Function name

__STATIC_INLINE uint32_t LL_MDMA_IsEnabledChannel (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Check if MDMA channel is enabled or disabled.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCR EN LL_MDMA_IsEnabledChannel

LL_MDMA_GenerateSWRequest

Function name

__STATIC_INLINE void LL_MDMA_GenerateSWRequest (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Generate a SW transfer request on the MDMA channel.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR SWRQ LL_MDMA_GenerateSWRequest

LL_MDMA_ConfigXferEndianness

Function name

__STATIC_INLINE void LL_MDMA_ConfigXferEndianness (MDMA_TypeDef * MDMAx, uint32_t Channel, uint32_t Configuration)

Function description

Configure Transfer endianness parameters : Word, Half word and Bytes Endianness.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_MDMA_WORD_ENDIANNESS_PRESERVE or LL_MDMA_WORD_ENDIANNESS_EXCHANGE
  - LL_MDMA_HALFWORD_ENDIANNESS_PRESERVE or LL_MDMA_HALFWORD_ENDIANNESS_EXCHANGE
  - LL_MDMA_BYTE_ENDIANNESS_PRESERVE or LL_MDMA_BYTE_ENDIANNESS_EXCHANGE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR WEX LL_MDMA_ConfigXferEndianness
-
- CCR HEX LL_MDMA_ConfigXferEndianness
-
- CCR BEX LL_MDMA_ConfigXferEndianness

LL_MDMA_SetWordEndianness

Function name

__STATIC_INLINE void LL_MDMA_SetWordEndianness (MDMA_TypeDef * MDMAx, uint32_t Channel, uint32_t Endianness)

Function description

Set Words Endianness.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
- **Endianness:** This parameter can be one of the following values:
  - LL_MDMA_WORD_ENDIANNESS_PRESERVE
  - LL_MDMA_WORD_ENDIANNESS_EXCHANGE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR WEX LL_MDMA_SetWordEndianness

LL_MDMA_GetWordEndianness

Function name

__STATIC_INLINE uint32_t LL_MDMA_GetWordEndianness (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Get Words Endianness.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **Returned:** value can be one of the following values:
  - LL_MDMA_WORD_ENDIANNESS_PRESERVE
  - LL_MDMA_WORD_ENDIANNESS_EXCHANGE
- **None:**

Reference Manual to LL API cross reference:

- CCR WEX LL_MDMA_GetWordEndianness

LL_MDMA_SetHalfWordEndianness

Function name

__STATIC_INLINE void LL_MDMA_SetHalfWordEndianness (MDMA_TypeDef * MDMAx, uint32_t Channel, uint32_t Endianness)

Function description

Set Half Words Endianness.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
- **Endianness:** This parameter can be one of the following values:
  - LL_MDMA_HALFWORD_ENDIANNESS_PRESERVE
  - LL_MDMA_HALFWORD_ENDIANNESS_EXCHANGE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR HEX LL_MDMA_SetHalfWordEndianness

LL_MDMA_GetHalfWordEndianness

Function name

__STATIC_INLINE uint32_t LL_MDMA_GetHalfWordEndianness (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Get Half Words Endianness.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **Returned:** value can be one of the following values:
  - LL_MDMA_HALFWORD_ENDIANNESS_PRESERVE
  - LL_MDMA_HALFWORD_ENDIANNESS_EXCHANGE
- **None:**

Reference Manual to LL API cross reference:

- CCR HEX LL_MDMA_GetHalfWordEndianness

LL_MDMA_SetByteEndianness

Function name

__STATIC_INLINE void LL_MDMA_SetByteEndianness (MDMA_TypeDef * MDMAx, uint32_t Channel, uint32_t Endianness)

Function description

Set Bytes Endianness.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
- **Endianness:** This parameter can be one of the following values:
  - LL_MDMA_BYTE_ENDIANNESS_PRESERVE
  - LL_MDMA_BYTE_ENDIANNESS_EXCHANGE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR BEX LL_MDMA_SetByteEndianness

LL_MDMA_GetByteEndianness

Function name

__STATIC_INLINE uint32_t LL_MDMA_GetByteEndianness (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Get Bytes Endianness.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **Returned:** value can be one of the following values:
  - LL_MDMA_BYTE_ENDIANNESS_PRESERVE
  - LL_MDMA_BYTE_ENDIANNESS_EXCHANGE
- **None:**

Reference Manual to LL API cross reference:

- CCR BEX LL_MDMA_GetByteEndianness

LL_MDMA_SetChannelPriorityLevel

Function name

__STATIC_INLINE void LL_MDMA_SetChannelPriorityLevel (MDMA_TypeDef * MDMAx, uint32_t Channel, uint32_t Priority)

Function description

Set Channel priority level.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
- **Priority:** This parameter can be one of the following values:
  - LL_MDMA_PRIORITY_LOW
  - LL_MDMA_PRIORITY_MEDIUM
  - LL_MDMA_PRIORITY_HIGH
  - LL_MDMA_PRIORITY_VERYHIGH

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR PL LL_MDMA_SetChannelPriorityLevel

LL_MDMA_GetChannelPriorityLevel

Function name

__STATIC_INLINE uint32_t LL_MDMA_GetChannelPriorityLevel (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Get Channel priority level.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **Returned:** value can be one of the following values:
  - LL_MDMA_PRIORITY_LOW
  - LL_MDMA_PRIORITY_MEDIUM
  - LL_MDMA_PRIORITY_HIGH
  - LL_MDMA_PRIORITY_VERYHIGH
- **None:**

Reference Manual to LL API cross reference:

- CCR PL LL_MDMA_GetChannelPriorityLevel

LL_MDMA_ConfigTransfer

Function name

__STATIC_INLINE void LL_MDMA_ConfigTransfer (MDMA_TypeDef * MDMAx, uint32_t Channel, uint32_t Configuration, uint32_t BufferXferLength)

Function description

Configure MDMA transfer parameters.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_MDMA_BUFF_WRITE_DISABLE or LL_MDMA_BUFF_WRITE_ENABLE
  - LL_MDMA_REQUEST_MODE_HW or LL_MDMA_REQUEST_MODE_SW
  - LL_MDMA_BUFFER_TRANSFER or LL_MDMA_BLOCK_TRANSFER or LL_MDMA_REPEAT_BLOCK_TRANSFER or LL_MDMA_FULL_TRANSFER
  - LL_MDMA_DATAALIGN_RIGHT or LL_MDMA_DATAALIGN_RIGHT_SIGNED or LL_MDMA_DATAALIGN_LEFT
  - LL_MDMA_PACK_DISABLE or LL_MDMA_PACK_ENABLE
  - LL_MDMA_DEST_BURST_SINGLE or LL_MDMA_DEST_BURST_2BEATS or LL_MDMA_DEST_BURST_4BEATS or LL_MDMA_DEST_BURST_8BEATS or LL_MDMA_DEST_BURST_16BEATS or LL_MDMA_DEST_BURST_32BEATS or LL_MDMA_DEST_BURST_64BEATS or LL_MDMA_DEST_BURST_128BEATS
  - LL_MDMA_SRC_BURST_SINGLE or LL_MDMA_SRC_BURST_2BEATS or LL_MDMA_SRC_BURST_4BEATS or LL_MDMA_SRC_BURST_8BEATS or LL_MDMA_SRC_BURST_16BEATS or LL_MDMA_SRC_BURST_32BEATS or LL_MDMA_SRC_BURST_64BEATS or LL_MDMA_SRC_BURST_128BEATS
  - LL_MDMA_DEST_INC_OFFSET_BYTE or LL_MDMA_DEST_INC_OFFSET_HALFWORD or LL_MDMA_DEST_INC_OFFSET_WORD or LL_MDMA_DEST_INC_OFFSET_DOUBLEWORD
  - LL_MDMA_SRC_INC_OFFSET_BYTE or LL_MDMA_SRC_INC_OFFSET_HALFWORD or LL_MDMA_SRC_INC_OFFSET_WORD or LL_MDMA_SRC_INC_OFFSET_DOUBLEWORD
  - LL_MDMA_DEST_DATA_SIZE_BYTE or LL_MDMA_DEST_DATA_SIZE_HALFWORD or LL_MDMA_DEST_DATA_SIZE_WORD or LL_MDMA_DEST_DATA_SIZE_DOUBLEWORD
  - LL_MDMA_SRC_DATA_SIZE_BYTE or LL_MDMA_SRC_DATA_SIZE_HALFWORD or LL_MDMA_SRC_DATA_SIZE_WORD or LL_MDMA_SRC_DATA_SIZE_DOUBLEWORD
  - LL_MDMA_DEST_FIXED or LL_MDMA_DEST_INCREMENT or LL_MDMA_DEST_DECREMENT
  - LL_MDMA_SRC_FIXED or LL_MDMA_SRC_INCREMENT or LL_MDMA_SRC_DECREMENT
- **BufferXferLength:** This parameter can be a value Between 0 to 0x0000007F

Return values

- **None:**

Reference Manual to LL API cross reference:

- CTCR BWM LL_MDMA_ConfigTransfer
- CTCR SWRM LL_MDMA_ConfigTransfer
- CTCR TRGM LL_MDMA_ConfigTransfer
- CTCR PAM LL_MDMA_ConfigTransfer

- CTCR SINC LL_MDMA_ConfigTransfer

LL_MDMA_EnableBufferableWrMode

Function name

__STATIC_INLINE void LL_MDMA_EnableBufferableWrMode (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Enable Bufferable Write Mode.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **None:**

Reference Manual to LL API cross reference:

- CTCR BWM LL_MDMA_EnableBufferableWrMode

LL_MDMA_DisableBufferableWrMode

Function name

__STATIC_INLINE void LL_MDMA_DisableBufferableWrMode (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Disable Bufferable Write Mode.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **None:**

Reference Manual to LL API cross reference:

- CTCR BWM LL_MDMA_DisableBufferableWrMode

LL_MDMA_IsEnabledBufferableWrMode

Function name

__STATIC_INLINE uint32_t LL_MDMA_IsEnabledBufferableWrMode (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Check if Bufferable Write Mode is enabled or disabled.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6

LL_MDMA_SetRequestMode

Function name

__STATIC_INLINE void LL_MDMA_SetRequestMode (MDMA_TypeDef * MDMAx, uint32_t Channel, uint32_t RequestMode)

Function description

Set Request Mode.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
- **RequestMode:** This parameter can be one of the following values:
  - LL_MDMA_REQUEST_MODE_HW
  - LL_MDMA_REQUEST_MODE_SW

Return values

- **None:**

LL_MDMA_SetBlkDataLength

Function name

__STATIC_INLINE void LL_MDMA_SetBlkDataLength (MDMA_TypeDef * MDMAx, uint32_t Channel, uint32_t BlkDataLength)

Function description

Set Block Number of data bytes to transfer.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
- **BlkDataLength:** Between 0 to 0x00010000

Return values

- **None:**

Reference Manual to LL API cross reference:

- CBNDTR BNDT LL_MDMA_SetBlkDataLength

LL_MDMA_GetBlkDataLength

Function name

__STATIC_INLINE uint32_t LL_MDMA_GetBlkDataLength (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Get Block Number of data bytes to transfer.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5

Reference Manual to LL API cross reference:

- CCR CTCIE LL_MDMA_DisableIT_CTC

LL_MDMA_DisableIT_BRT

Function name

__STATIC_INLINE void LL_MDMA_DisableIT_BRT (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Disable MDMA Channel x Block Repeat Transfer interrupt.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCR TCIE LL_MDMA_DisableIT_TC

LL_MDMA_IsEnabledIT_TE

Function name

__STATIC_INLINE uint32_t LL_MDMA_IsEnabledIT_TE (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Check if MDMA Channel x Transfer Error interrupt is enabled.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5

  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCR BTIE LL_MDMA_IsEnabledIT_BT

LL_MDMA_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_MDMA_IsEnabledIT_TC (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

Check if MDMA Channel x buffer transfer complete interrupt is enabled.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCR TCIE LL_MDMA_IsEnabledIT_TC

LL_MDMA_Init

Function name

uint32_t LL_MDMA_Init (MDMA_TypeDef * MDMAx, uint32_t Channel, LL_MDMA_InitTypeDef * MDMA_InitStruct)

Function description

Initialize the MDMA registers according to the specified parameters in MDMA_InitStruct.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
- **MDMA_InitStruct:** pointer to a LL_MDMA_InitTypeDef structure.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: MDMA registers are initialized
  - ERROR: Not applicable

Notes

- To convert MDMAx_Channely Instance to MDMAx Instance and Channely, use helper macros : LL_MDMA_GET_INSTANCE LL_MDMA_GET_CHANNEL

LL_MDMA_DeInit

Function name

uint32_t LL_MDMA_DeInit (MDMA_TypeDef * MDMAx, uint32_t Channel)

Function description

De-initialize the MDMA registers to their default reset values.

Parameters

- **MDMAx:** MDMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL_MDMA_CHANNEL_0
  - LL_MDMA_CHANNEL_1
  - LL_MDMA_CHANNEL_2
  - LL_MDMA_CHANNEL_3
  - LL_MDMA_CHANNEL_4
  - LL_MDMA_CHANNEL_5
  - LL_MDMA_CHANNEL_6
  - LL_MDMA_CHANNEL_7
  - LL_MDMA_CHANNEL_8
  - LL_MDMA_CHANNEL_9
  - LL_MDMA_CHANNEL_10
  - LL_MDMA_CHANNEL_11
  - LL_MDMA_CHANNEL_12
  - LL_MDMA_CHANNEL_13
  - LL_MDMA_CHANNEL_14
  - LL_MDMA_CHANNEL_15
  - LL_MDMA_CHANNEL_ALL

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: MDMA registers are de-initialized
  - ERROR: Not applicable

LL_MDMA_StructInit

Function name

void LL_MDMA_StructInit (LL_MDMA_InitTypeDef * MDMA_InitStruct)

Function description

Set each LL_MDMA_InitTypeDef field to default value.

Parameters

- **MDMA_InitStruct:** Pointer to a LL_MDMA_InitTypeDef structure.

Return values

- **None:**

LL_MDMA_CreateLinkNode

Function name

void LL_MDMA_CreateLinkNode (LL_MDMA_InitTypeDef * MDMA_InitStruct, LL_MDMA_LinkNodeTypeDef * pNode)

Function description

Initializes MDMA linked list node according to the specified parameters in the MDMA_InitStruct.

Parameters

- **MDMA_InitStruct:** Pointer to a LL_MDMA_InitTypeDef structure that contains linked list node registers configurations.
- **pNode:** Pointer to linked list node to fill according to MDMA_InitStruct parameters.

Return values

- **None:**

LL_MDMA_ConnectLinkNode

Function name

void LL_MDMA_ConnectLinkNode (LL_MDMA_LinkNodeTypeDef * pPrevLinkNode, LL_MDMA_LinkNodeTypeDef * pNewLinkNode)

Function description

Connect Linked list Nodes.

Parameters

- **pPrevLinkNode:** Pointer to previous linked list node to be connected to new Lined list node.
- **pNewLinkNode:** Pointer to new Linked list.

Return values

- **None:**

LL_MDMA_DisconnectNextLinkNode

Function name

void LL_MDMA_DisconnectNextLinkNode (LL_MDMA_LinkNodeTypeDef * pLinkNode)

Function description

Disconnect the next linked list node.

Parameters

- **pLinkNode:** Pointer to linked list node to be disconnected from the next one.

Return values

- **None:**

117.3 MDMA Firmware driver defines

The following section lists the various define and macros of the module.

117.3.1 MDMA

MDMA

Block Repeat Destination address Update Mode

LL_MDMA_BLK_RPT_DEST_ADDR_INCREMENT

Destination address pointer is incremented after each block transfer by Destination Update Value

LL_MDMA_BLK_RPT_DEST_ADDR_DECREMENT

Destination address pointer is decremented after each block transfer by Destination Update Value

Bufferable Write Mode

LL_MDMA_BUFF_WRITE_DISABLE

destination write operation is non-bufferable

LL_MDMA_BUFF_WRITE_ENABLE

destination write operation is bufferable

Byte Endianness

LL_MDMA_BYTE_ENDIANNESS_PRESERVE

Little endianness preserved for bytes

LL_MDMA_BYTE_ENDIANNESS_EXCHANGE

byte order exchanged when destination data size is half word , word or double word

Destination BUS Selection

LL_MDMA_DEST_BUS_SYSTEM_AXI

System/AXI bus is used as destination

LL_MDMA_DEST_BUS_AHB_TCM

AHB bus/TCM is used as destination

Destination Data Size

LL_MDMA_DEST_DATA_SIZE_BYTE

Destination data size is Byte

LL_MDMA_DEST_DATA_SIZE_HALFWORD

Destination data size is half word

LL_MDMA_DEST_DATA_SIZE_WORD

Destination data size is word

LL_MDMA_DEST_DATA_SIZE_DOUBLEWORD

Destination data size is double word

Destination Increment Mode

LL_MDMA_DEST_FIXED

Destination address pointer is fixed

LL_MDMA_DEST_INCREMENT

Destination address pointer is incremented after each data transfer

LL_MDMA_DEST_DECREMENT

Destination address pointer is decremented after each data transfer

Destination Increment Offset Size

LL_MDMA_DEST_INC_OFFSET_BYTE

offset is Byte (8-bit)

LL_MDMA_DEST_INC_OFFSET_HALFWORD

offset is Half Word (16-bit)

LL_MDMA_DEST_INC_OFFSET_WORD

offset is Word (32-bit)

LL_MDMA_DEST_INC_OFFSET_DOUBLEWORD

offset is Double Word (64-bit)

Half Word Endianness

LL_MDMA_HALFWORD_ENDIANNESS_PRESERVE

Little endianness preserved for half words

LL_MDMA_HALFWORD_ENDIANNESS_EXCHANGE

half word order exchanged when destination data size is word or double word

HW Trigger Selection

LL_MDMA_REQ_DMA1_STREAM0_TC

MDMA HW Trigger (request) is DMA1 Stream 0 Transfer Complete Flag

LL_MDMA_REQ_DMA1_STREAM1_TC

MDMA HW Trigger (request) is DMA1 Stream 1 Transfer Complete Flag

LL_MDMA_REQ_DMA1_STREAM2_TC

MDMA HW Trigger (request) is DMA1 Stream 2 Transfer Complete Flag

LL_MDMA_REQ_DMA1_STREAM3_TC

MDMA HW Trigger (request) is DMA1 Stream 3 Transfer Complete Flag

LL_MDMA_REQ_DMA1_STREAM4_TC

MDMA HW Trigger (request) is DMA1 Stream 4 Transfer Complete Flag

LL_MDMA_REQ_DMA1_STREAM5_TC

MDMA HW Trigger (request) is DMA1 Stream 5 Transfer Complete Flag

LL_MDMA_REQ_DMA1_STREAM6_TC

MDMA HW Trigger (request) is DMA1 Stream 6 Transfer Complete Flag

LL_MDMA_REQ_DMA1_STREAM7_TC

MDMA HW Trigger (request) is DMA1 Stream 7 Transfer Complete Flag

LL_MDMA_REQ_DMA2_STREAM0_TC

MDMA HW Trigger (request) is DMA2 Stream 0 Transfer Complete Flag

LL_MDMA_REQ_DMA2_STREAM1_TC

MDMA HW Trigger (request) is DMA2 Stream 1 Transfer Complete Flag

LL_MDMA_REQ_DMA2_STREAM2_TC

MDMA HW Trigger (request) is DMA2 Stream 2 Transfer Complete Flag

LL_MDMA_REQ_DMA2_STREAM3_TC

MDMA HW Trigger (request) is DMA2 Stream 3 Transfer Complete Flag

LL_MDMA_REQ_DMA2_STREAM4_TC

MDMA HW Trigger (request) is DMA2 Stream 4 Transfer Complete Flag

LL_MDMA_REQ_DMA2_STREAM5_TC

MDMA HW Trigger (request) is DMA2 Stream 5 Transfer Complete Flag

LL_MDMA_REQ_DMA2_STREAM6_TC

MDMA HW Trigger (request) is DMA2 Stream 6 Transfer Complete Flag

LL_MDMA_REQ_DMA2_STREAM7_TC

MDMA HW Trigger (request) is DMA2 Stream 7 Transfer Complete Flag

LL_MDMA_REQ_LTDC_LINE_IT

MDMA HW Trigger (request) is LTDC Line interrupt Flag

LL_MDMA_REQ_JPEG_INFIFO_TH

MDMA HW Trigger (request) is JPEG Input FIFO threshold Flag

LL_MDMA_REQ_JPEG_INFIFO_NF

MDMA HW Trigger (request) is JPEG Input FIFO not full Flag

LL_MDMA_REQ_JPEG_OUTFIFO_TH

MDMA HW Trigger (request) is JPEG Output FIFO threshold Flag

LL_MDMA_REQ_JPEG_OUTFIFO_NE

MDMA HW Trigger (request) is JPEG Output FIFO not empty Flag

LL_MDMA_REQ_JPEG_END_CONVERSION

MDMA HW Trigger (request) is JPEG End of conversion Flag

LL_MDMA_REQ_QUADSPI_FIFO_TH

MDMA HW Trigger (request) is QSPI FIFO threshold Flag

LL_MDMA_REQ_QUADSPI_TC

MDMA HW Trigger (request) is QSPI Transfer complete Flag

LL_MDMA_REQ_DMA2D_CLUT_TC

MDMA HW Trigger (request) is DMA2D CLUT Transfer Complete Flag

LL_MDMA_REQ_DMA2D_TC

MDMA HW Trigger (request) is DMA2D Transfer Complete Flag

LL_MDMA_REQ_DMA2D_TW

MDMA HW Trigger (request) is DMA2D Transfer Watermark Flag

LL_MDMA_REQ_SDMMC1_END_DATA

MDMA HW Trigger (request) is SDMMC1 End of Data Flag

LL_MDMA_REQ_SDMMC1_DMA_ENDBUFFER

MDMA HW Trigger (request) is SDMMC1 Internal DMA buffer End Flag : This trigger is available starting from STM32H7 Rev.B devices

LL_MDMA_REQ_SDMMC1_COMMAND_END

MDMA HW Trigger (request) is SDMMC1 Command End Flag : This trigger is available starting from STM32H7 Rev.B devices

Transfer Packing

LL_MDMA_PACK_DISABLE

Packing disabled

LL_MDMA_PACK_ENABLE

Packing enabled

Padding Alignment Mode

LL_MDMA_DATAALIGN_RIGHT

Right Aligned, padded w/ 0s (default)

LL_MDMA_DATAALIGN_RIGHT_SIGNED

Right Aligned, Sign extended , Note : this mode is allowed only if the Source data size smaller than Destination data size

LL_MDMA_DATAALIGN_LEFT

Left Aligned (padded with 0s)

Transfer Priority level

LL_MDMA_PRIORITY_LOW

Priority level : Low

LL_MDMA_PRIORITY_MEDIUM

Priority level : Medium

LL_MDMA_PRIORITY_HIGH

Priority level : High

LL_MDMA_PRIORITY_VERYHIGH

Priority level : Very_High

Request Mode

LL_MDMA_REQUEST_MODE_HW

Request mode is Hardware

LL_MDMA_REQUEST_MODE_SW

Request mode is Software

Source Block Repeat address Update Mode

LL_MDMA_BLK_RPT_SRC_ADDR_INCREMENT

Source address pointer is incremented after each block transfer by Source Update Value

LL_MDMA_BLK_RPT_SRC_ADDR_DECREMENT

Source address pointer is decremented after each block transfer by Source Update Value

Transfer Source Burst

LL_MDMA_SRC_BURST_SINGLE

Single transfer

LL_MDMA_SRC_BURST_2BEATS

Burst 2 beats

LL_MDMA_SRC_BURST_4BEATS

Burst 4 beats

LL_MDMA_SRC_BURST_8BEATS

Burst 8 beats

LL_MDMA_SRC_BURST_16BEATS

Burst 16 beats

LL_MDMA_SRC_BURST_32BEATS

Burst 32 beats

LL_MDMA_SRC_BURST_64BEATS

Burst 64 beats

LL_MDMA_SRC_BURST_128BEATS

Burst 128 beats

Source BUS Selection

LL_MDMA_SRC_BUS_SYSTEM_AXI

System/AXI bus is used as source

LL_MDMA_SRC_BUS_AHB_TCM

AHB bus/TCM is used as source

Source Data Size

LL_MDMA_SRC_DATA_SIZE_BYTE

Source data size is Byte

LL_MDMA_SRC_DATA_SIZE_HALFWORD

Source data size is half word

LL_MDMA_SRC_DATA_SIZE_WORD

Source data size is word

LL_MDMA_SRC_DATA_SIZE_DOUBLEWORD

Source data size is double word

Source Increment Mode

LL_MDMA_SRC_FIXED

Destination address pointer is fixed

LL_MDMA_SRC_INCREMENT

Destination address pointer is incremented after each data transfer

LL_MDMA_SRC_DECREMENT

Destination address pointer is decremented after each data transfer

Source Increment Offset Size

LL_MDMA_SRC_INC_OFFSET_BYTE

offset is Byte (8-bit)

LL_MDMA_SRC_INC_OFFSET_HALFWORD

offset is Half Word (16-bit)

LL_MDMA_SRC_INC_OFFSET_WORD

offset is Word (32-bit)

LL_MDMA_SRC_INC_OFFSET_DOUBLEWORD

offset is Double Word (64-bit)

Trigger Mode

LL_MDMA_BUFFER_TRANSFER

Each MDMA request (SW or HW) triggers a buffer transfer

LL_MDMA_BLOCK_TRANSFER

Each MDMA request (SW or HW) triggers a block transfer

LL_MDMA_REPEAT_BLOCK_TRANSFER

Each MDMA request (SW or HW) triggers a repeated block transfer

LL_MDMA_FULL_TRANSFER

Each MDMA request (SW or HW) triggers a Full transfer or a linked list transfer if any

Word Endianness

LL_MDMA_WORD_ENDIANNESS_PRESERVE

Little endianness preserved for words

LL_MDMA_WORD_ENDIANNESS_EXCHANGE

word order exchanged when destination data size is double word

Transfer Error Direction

LL_MDMA_READ_ERROR

Last transfer error on the channel was a related to a read access

LL_MDMA_WRITE_ERROR

Last transfer error on the channel was a related to a write access

Convert MDMAxChannely

LL_MDMA_GET_INSTANCE

Description:

- Convert MDMAx_Channely into MDMAx.

Parameters:

- __CHANNEL_INSTANCE__: MDMAx_Channely

Return value:

- MDMAx

LL_MDMA_GET_CHANNEL

Description:

- Convert MDMAx_Channely into LL_MDMA_CHANNEL_y.

Parameters:

- __CHANNEL_INSTANCE__: MDMAx_Channely

Return value:

- LL_MDMA_CHANNEL_y

LL_MDMA_GET_CHANNEL_INSTANCE

Description:

- Convert MDMA Instance MDMAx and LL_MDMA_CHANNEL_y into MDMAx_Channely.

Parameters:

- __MDMA_INSTANCE__: MDMAx
- __CHANNEL__: LL_MDMA_CHANNEL_y

Return value:

- MDMAx_Channely

Common Write and read registers macros

LL_MDMA_WriteReg

Description:

- Write a value in MDMA register.

Parameters:

- __INSTANCE__: MDMA Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_MDMA_ReadReg

Description:

- Read a value in MDMA register.

Parameters:

- __INSTANCE__: MDMA Instance
- __REG__: Register to be read

Return value:

- Register: value

118 LL OPAMP Generic Driver

118.1 OPAMP Firmware driver registers structures

118.1.1 LL_OPAMP_InitTypeDef

LL_OPAMP_InitTypeDef is defined in the stm32h7xx_ll_opamp.h

Data Fields

- ***uint32_t PowerMode***
- ***uint32_t FunctionalMode***
- ***uint32_t InputNonInverting***
- ***uint32_t InputInverting***

Field Documentation

- ***uint32_t LL_OPAMP_InitTypeDef::PowerMode***

  Set OPAMP power mode. This parameter can be a value of ***OPAMP_LL_EC_POWER_MODE***This feature can be modified afterwards using unitary function **LL_OPAMP_SetPowerMode()**.
- ***uint32_t LL_OPAMP_InitTypeDef::FunctionalMode***

  Set OPAMP functional mode by setting internal connections: OPAMP operation in standalone, follower, ... This parameter can be a value of ***OPAMP_LL_EC_FUNCTIONAL_MODE***

  Note:

  – If OPAMP is configured in mode PGA, the gain can be configured using function **LL_OPAMP_SetPGAGain()**.

  This feature can be modified afterwards using unitary function **LL_OPAMP_SetFunctionalMode()**.
- ***uint32_t LL_OPAMP_InitTypeDef::InputNonInverting***

  Set OPAMP input non-inverting connection. This parameter can be a value of ***OPAMP_LL_EC_INPUT_NONINVERTING***This feature can be modified afterwards using unitary function **LL_OPAMP_SetInputNonInverting()**.
- ***uint32_t LL_OPAMP_InitTypeDef::InputInverting***

  Set OPAMP inverting input connection. This parameter can be a value of ***OPAMP_LL_EC_INPUT_INVERTING***

  Note:

  – OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin), this parameter is discarded.

  This feature can be modified afterwards using unitary function **LL_OPAMP_SetInputInverting()**.

118.2 OPAMP Firmware driver API description

The following section lists the various functions of the OPAMP library.

118.2.1 Detailed description of functions

LL_OPAMP_SetMode

Function name

__STATIC_INLINE void LL_OPAMP_SetMode (OPAMP_TypeDef * OPAMPx, uint32_t Mode)

Function description

Set OPAMP mode calibration or functional.

Parameters

- **OPAMPx:** OPAMP instance
- **Mode:** This parameter can be one of the following values:
  - LL_OPAMP_MODE_FUNCTIONAL
  - LL_OPAMP_MODE_CALIBRATION

Return values

- **None:**

Notes

- OPAMP mode corresponds to functional or calibration mode: functional mode: OPAMP operation in standalone, follower, ... Set functional mode using function LL_OPAMP_SetFunctionalMode().calibration mode: offset calibration of the selected transistors differential pair NMOS or PMOS.

Reference Manual to LL API cross reference:

- CSR CALON LL_OPAMP_SetMode

LL_OPAMP_GetMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetMode (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP mode calibration or functional.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_MODE_FUNCTIONAL
  - LL_OPAMP_MODE_CALIBRATION

Notes

- OPAMP mode corresponds to functional or calibration mode: functional mode: OPAMP operation in standalone, follower, ... Set functional mode using function LL_OPAMP_SetFunctionalMode().calibration mode: offset calibration of the selected transistors differential pair NMOS or PMOS.

Reference Manual to LL API cross reference:

- CSR CALON LL_OPAMP_GetMode

LL_OPAMP_SetFunctionalMode

Function name

__STATIC_INLINE void LL_OPAMP_SetFunctionalMode (OPAMP_TypeDef * OPAMPx, uint32_t FunctionalMode)

Function description

Set OPAMP functional mode by setting internal connections.

Parameters

- **OPAMPx:** OPAMP instance
- **FunctionalMode:** This parameter can be one of the following values:
  - LL_OPAMP_MODE_STANDALONE
  - LL_OPAMP_MODE_FOLLOWER
  - LL_OPAMP_MODE_PGA
  - LL_OPAMP_MODE_PGA_IO0
  - LL_OPAMP_MODE_PGA_IO0_BIAS
  - LL_OPAMP_MODE_PGA_IO0_IO1_BIAS

Return values

- **None:**

Notes

- This function reset bit of calibration mode to ensure to be in functional mode, in order to have OPAMP parameters (inputs selection, ...) set with the corresponding OPAMP mode to be effective.

Reference Manual to LL API cross reference:

- CSR VMSEL LL_OPAMP_SetFunctionalMode

LL_OPAMP_GetFunctionalMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetFunctionalMode (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP functional mode from setting of internal connections.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_MODE_STANDALONE
  - LL_OPAMP_MODE_FOLLOWER
  - LL_OPAMP_MODE_PGA
  - LL_OPAMP_MODE_PGA_IO0
  - LL_OPAMP_MODE_PGA_IO0_BIAS
  - LL_OPAMP_MODE_PGA_IO0_IO1_BIAS

Reference Manual to LL API cross reference:

- CSR VMSEL LL_OPAMP_GetFunctionalMode

LL_OPAMP_SetPGAGain

Function name

__STATIC_INLINE void LL_OPAMP_SetPGAGain (OPAMP_TypeDef * OPAMPx, uint32_t PGAGain)

Function description

Set OPAMP PGA gain.

Parameters

- **OPAMPx:** OPAMP instance
- **PGAGain:** This parameter can be one of the following values:
  - LL_OPAMP_PGA_GAIN_2_OR_MINUS_1
  - LL_OPAMP_PGA_GAIN_4_OR_MINUS_3
  - LL_OPAMP_PGA_GAIN_8_OR_MINUS_7
  - LL_OPAMP_PGA_GAIN_16_OR_MINUS_15

Return values

- **None:**

Notes

- Preliminarily, OPAMP must be set in mode PGA using function LL_OPAMP_SetFunctionalMode().

Reference Manual to LL API cross reference:

- CSR PGGAIN LL_OPAMP_SetPGAGain

LL_OPAMP_GetPGAGain

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetPGAGain (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP PGA gain.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_PGA_GAIN_2_OR_MINUS_1
  - LL_OPAMP_PGA_GAIN_4_OR_MINUS_3
  - LL_OPAMP_PGA_GAIN_8_OR_MINUS_7
  - LL_OPAMP_PGA_GAIN_16_OR_MINUS_15

Notes

- Preliminarily, OPAMP must be set in mode PGA using function LL_OPAMP_SetFunctionalMode().

Reference Manual to LL API cross reference:

- CSR PGGAIN LL_OPAMP_GetPGAGain

LL_OPAMP_SetPowerMode

Function name

__STATIC_INLINE void LL_OPAMP_SetPowerMode (OPAMP_TypeDef * OPAMPx, uint32_t PowerMode)

Function description

Set OPAMP power mode normal or highspeed.

Parameters

- **OPAMPx:** OPAMP instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMAL
  - LL_OPAMP_POWERMODE_HIGHSPEED

Return values

- **None:**

Notes

- OPAMP highspeed mode allows output stage to have a better slew rate.

Reference Manual to LL API cross reference:

- CSR OPAHSM LL_OPAMP_SetPowerMode

LL_OPAMP_GetPowerMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetPowerMode (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP power mode normal or highspeed.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMAL
  - LL_OPAMP_POWERMODE_HIGHSPEED

Notes

- OPAMP highspeed mode allows output stage to have a better slew rate.

Reference Manual to LL API cross reference:

- CSR OPAHSM LL_OPAMP_GetPowerMode

LL_OPAMP_SetInputNonInverting

Function name

__STATIC_INLINE void LL_OPAMP_SetInputNonInverting (OPAMP_TypeDef * OPAMPx, uint32_t InputNonInverting)

Function description

Set OPAMP non-inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance
- **InputNonInverting:** This parameter can be one of the following values:
  - LL_OPAMP_INPUT_NONINVERT_IO0
  - LL_OPAMP_INPUT_NONINVERT_DAC
  - LL_OPAMP_INPUT_NONINVERT_DAC2 (Only for OPAMP2)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR VPSEL LL_OPAMP_SetInputNonInverting

LL_OPAMP_GetInputNonInverting

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetInputNonInverting (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP non-inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_INPUT_NONINVERT_IO0
  - LL_OPAMP_INPUT_NONINVERT_DAC
  - LL_OPAMP_INPUT_NONINVERT_DAC2 (Only for OPAMP2)

Reference Manual to LL API cross reference:

- CSR VPSEL LL_OPAMP_GetInputNonInverting

LL_OPAMP_SetInputInverting

Function name

__STATIC_INLINE void LL_OPAMP_SetInputInverting (OPAMP_TypeDef * OPAMPx, uint32_t InputInverting)

Function description

Set OPAMP inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance
- **InputInverting:** This parameter can be one of the following values:
  - LL_OPAMP_INPUT_INVERT_IO0
  - LL_OPAMP_INPUT_INVERT_IO1
  - LL_OPAMP_INPUT_INVERT_CONNECT_NO

Return values

- **None:**

Notes

- OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin).

Reference Manual to LL API cross reference:

- CSR VMSEL LL_OPAMP_SetInputInverting

LL_OPAMP_GetInputInverting

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetInputInverting (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_INPUT_INVERT_IO0
  - LL_OPAMP_INPUT_INVERT_IO1
  - LL_OPAMP_INPUT_INVERT_CONNECT_NO

Reference Manual to LL API cross reference:

- CSR VMSEL LL_OPAMP_GetInputInverting

LL_OPAMP_SetTrimmingMode

Function name

__STATIC_INLINE void LL_OPAMP_SetTrimmingMode (OPAMP_TypeDef * OPAMPx, uint32_t TrimmingMode)

Function description

Set OPAMP trimming mode.

Parameters

- **OPAMPx:** OPAMP instance
- **TrimmingMode:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_FACTORY
  - LL_OPAMP_TRIMMING_USER

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR USERTRIM LL_OPAMP_SetTrimmingMode

LL_OPAMP_GetTrimmingMode

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetTrimmingMode (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP trimming mode.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_TRIMMING_FACTORY
  - LL_OPAMP_TRIMMING_USER

Reference Manual to LL API cross reference:

- CSR USERTRIM LL_OPAMP_GetTrimmingMode

LL_OPAMP_SetCalibrationSelection

Function name

__STATIC_INLINE void LL_OPAMP_SetCalibrationSelection (OPAMP_TypeDef * OPAMPx, uint32_t TransistorsDiffPair)

Function description

Set OPAMP offset to calibrate the selected transistors differential pair NMOS or PMOS.

Parameters

- **OPAMPx:** OPAMP instance
- **TransistorsDiffPair:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS (1)
  - LL_OPAMP_TRIMMING_PMOS (1)
  - LL_OPAMP_TRIMMING_NMOS_VREF_50PC_VDDA
  - LL_OPAMP_TRIMMING_PMOS_VREF_3_3PC_VDDA

  (1) Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS)

Return values

- **None:**

Notes

- Preliminarily, OPAMP must be set in mode calibration using function LL_OPAMP_SetMode().

Reference Manual to LL API cross reference:

- CSR CALSEL LL_OPAMP_SetCalibrationSelection

LL_OPAMP_GetCalibrationSelection

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetCalibrationSelection (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP offset to calibrate the selected transistors differential pair NMOS or PMOS.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS (1)
  - LL_OPAMP_TRIMMING_PMOS (1)
  - LL_OPAMP_TRIMMING_NMOS_VREF_50PC_VDDA
  - LL_OPAMP_TRIMMING_PMOS_VREF_3_3PC_VDDA

  (1) Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS)

Notes

- Preliminarily, OPAMP must be set in mode calibration using function LL_OPAMP_SetMode().

Reference Manual to LL API cross reference:

- CSR CALSEL LL_OPAMP_GetCalibrationSelection

LL_OPAMP_IsCalibrationOutputSet

Function name

__STATIC_INLINE uint32_t LL_OPAMP_IsCalibrationOutputSet (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP calibration result of toggling output.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **State:** of bit (1 or 0).

Notes

- This functions returns: 0 if OPAMP calibration output is reset 1 if OPAMP calibration output is set

Reference Manual to LL API cross reference:

- CSR OUTCAL LL_OPAMP_IsCalibrationOutputSet

LL_OPAMP_SetTrimmingValue

Function name

__STATIC_INLINE void LL_OPAMP_SetTrimmingValue (OPAMP_TypeDef * OPAMPx, uint32_t PowerMode, uint32_t TransistorsDiffPair, uint32_t TrimmingValue)

Function description

Set OPAMP trimming factor for the selected transistors differential pair NMOS or PMOS, corresponding to the selected power mode.

Parameters

- **OPAMPx:** OPAMP instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMAL
  - LL_OPAMP_POWERMODE_HIGHSPEED
- **TransistorsDiffPair:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS
- **TrimmingValue:** 0x00...0x1F

Return values

- **None:**

Reference Manual to LL API cross reference:

- OTR TRIMOFFSETN LL_OPAMP_SetTrimmingValue
- OTR TRIMOFFSETP LL_OPAMP_SetTrimmingValue
- HSOTR TRIMHSOFFSETN LL_OPAMP_SetTrimmingValue
- HSOTR TRIMHSOFFSETP LL_OPAMP_SetTrimmingValue

LL_OPAMP_GetTrimmingValue

Function name

__STATIC_INLINE uint32_t LL_OPAMP_GetTrimmingValue (OPAMP_TypeDef * OPAMPx, uint32_t PowerMode, uint32_t TransistorsDiffPair)

Function description

Get OPAMP trimming factor for the selected transistors differential pair NMOS or PMOS, corresponding to the selected power mode.

Parameters

- **OPAMPx:** OPAMP instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_OPAMP_POWERMODE_NORMAL
  - LL_OPAMP_POWERMODE_HIGHSPEED
- **TransistorsDiffPair:** This parameter can be one of the following values:
  - LL_OPAMP_TRIMMING_NMOS
  - LL_OPAMP_TRIMMING_PMOS

Return values

- **0x0...0x1F:**

Reference Manual to LL API cross reference:

- OTR TRIMOFFSETN LL_OPAMP_GetTrimmingValue
- OTR TRIMOFFSETP LL_OPAMP_GetTrimmingValue
- HSOTR TRIMHSOFFSETN LL_OPAMP_GetTrimmingValue
- HSOTR TRIMHSOFFSETP LL_OPAMP_GetTrimmingValue

LL_OPAMP_Enable

Function name

__STATIC_INLINE void LL_OPAMP_Enable (OPAMP_TypeDef * OPAMPx)

Function description

Enable OPAMP instance.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **None:**

Notes

- After enable from off state, OPAMP requires a delay to fulfill wake up time specification. Refer to device datasheet, parameter "tWAKEUP".

Reference Manual to LL API cross reference:

- CSR OPAMPXEN LL_OPAMP_Enable

LL_OPAMP_Disable

Function name

__STATIC_INLINE void LL_OPAMP_Disable (OPAMP_TypeDef * OPAMPx)

Function description

Disable OPAMP instance.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR OPAMPXEN LL_OPAMP_Disable

LL_OPAMP_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_OPAMP_IsEnabled (OPAMP_TypeDef * OPAMPx)

Function description

Get OPAMP instance enable state (0: OPAMP is disabled, 1: OPAMP is enabled)

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR OPAMPXEN LL_OPAMP_IsEnabled

LL_OPAMP_DeInit

Function name

ErrorStatus LL_OPAMP_DeInit (OPAMP_TypeDef * OPAMPx)

Function description

De-initialize registers of the selected OPAMP instance to their default reset values.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: OPAMP registers are de-initialized
  - ERROR: OPAMP registers are not de-initialized

Notes

- If comparator is locked, de-initialization by software is not possible. The only way to unlock the comparator is a device hardware reset.

LL_OPAMP_Init

Function name

ErrorStatus LL_OPAMP_Init (OPAMP_TypeDef * OPAMPx, LL_OPAMP_InitTypeDef * OPAMP_InitStruct)

Function description

Initialize some features of OPAMP instance.

Parameters

- **OPAMPx:** OPAMP instance
- **OPAMP_InitStruct:** Pointer to a LL_OPAMP_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: OPAMP registers are initialized
  - ERROR: OPAMP registers are not initialized

Notes

- This function reset bit of calibration mode to ensure to be in functional mode, in order to have OPAMP parameters (inputs selection, ...) set with the corresponding OPAMP mode to be effective.

LL_OPAMP_StructInit

Function name

void LL_OPAMP_StructInit (LL_OPAMP_InitTypeDef * OPAMP_InitStruct)

Function description

Set each LL_OPAMP_InitTypeDef field to default value.

Parameters

- **OPAMP_InitStruct:** pointer to a LL_OPAMP_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

118.3 OPAMP Firmware driver defines

The following section lists the various define and macros of the module.

118.3.1 OPAMP

OPAMP

OPAMP functional mode

LL_OPAMP_MODE_STANDALONE

OPAMP functional mode, OPAMP operation in standalone

LL_OPAMP_MODE_FOLLOWER

OPAMP functional mode, OPAMP operation in follower

LL_OPAMP_MODE_PGA

OPAMP functional mode, OPAMP operation in PGA

LL_OPAMP_MODE_PGA_IO0

In PGA mode, the inverting input is connected to VINM0 for filtering

LL_OPAMP_MODE_PGA_IO0_BIAS

In PGA mode, the inverting input is connected to VINM0

LL_OPAMP_MODE_PGA_IO0_IO1_BIAS

In PGA mode, the inverting input is connected to VINM0

Definitions of OPAMP hardware constraints delays

LL_OPAMP_DELAY_STARTUP_US

Delay for OPAMP startup time

OPAMP input inverting

LL_OPAMP_INPUT_INVERT_IO0

OPAMP inverting input connected to I/O VINM0 (PC5 for OPAMP1, PE8 for OPAMP2) Note: On this STM32 series, all OPAMPx are not available on all devices. Refer to device datasheet for more details

LL_OPAMP_INPUT_INVERT_IO1

OPAMP inverting input connected to I/0 VINM1 (PA7 for OPAMP1, PG1 for OPAMP2) Note: On this STM32 series, all OPAMPx are not available on all devices. Refer to device datasheet for more details

LL_OPAMP_INPUT_INVERT_CONNECT_NO

OPAMP inverting input not externally connected (intended for OPAMP in mode follower or PGA with positive gain without bias). Note: On this STM32 series, this literal include cases of value 0x11 for mode follower and value 0x10 for mode PGA.

OPAMP input non-inverting

LL_OPAMP_INPUT_NONINVERT_IO0

OPAMP non inverting input connected to I/O VINP0 (PB0 for OPAMP1, PE9 for OPAMP2) Note: On this STM32 series, all OPAMPx are not available on all devices. Refer to device datasheet for more details

LL_OPAMP_INPUT_NONINVERT_DAC

OPAMP non inverting input connected internally to DAC channel (DAC1_CH1 for OPAMP1, DAC1_CH2 for OPAMP2) Note: On this STM32 series, all OPAMPx are not available on all devices. Refer to device datasheet for more details

OPAMP mode calibration or functional.

LL_OPAMP_MODE_FUNCTIONAL

OPAMP functional mode

LL_OPAMP_MODE_CALIBRATION

OPAMP calibration mode

OPAMP PGA gain (relevant when OPAMP is in functional mode PGA)

LL_OPAMP_PGA_GAIN_2_OR_MINUS_1

OPAMP PGA gain 2 or -1

LL_OPAMP_PGA_GAIN_4_OR_MINUS_3

OPAMP PGA gain 4 or -3

LL_OPAMP_PGA_GAIN_8_OR_MINUS_7

OPAMP PGA gain 8 or -7

LL_OPAMP_PGA_GAIN_16_OR_MINUS_15

OPAMP PGA gain 16 or -15

OPAMP PowerMode

LL_OPAMP_POWERMODE_NORMAL

OPAMP output in normal mode

LL_OPAMP_POWERMODE_HIGHSPEED

OPAMP output in highspeed mode

OPAMP trimming mode

LL_OPAMP_TRIMMING_FACTORY

OPAMP trimming factors set to factory values

LL_OPAMP_TRIMMING_USER

OPAMP trimming factors set to user values

OPAMP trimming of transistors differential pair NMOS or PMOS

LL_OPAMP_TRIMMING_NMOS_VREF_90PC_VDDA

OPAMP trimming of transistors differential pair NMOS (internal reference voltage set to 0.9*Vdda). Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS).

LL_OPAMP_TRIMMING_NMOS_VREF_50PC_VDDA

OPAMP trimming of transistors differential pair NMOS (internal reference voltage set to 0.5*Vdda).

LL_OPAMP_TRIMMING_PMOS_VREF_10PC_VDDA

OPAMP trimming of transistors differential pair PMOS (internal reference voltage set to 0.1*Vdda). Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS).

LL_OPAMP_TRIMMING_PMOS_VREF_3_3PC_VDDA

OPAMP trimming of transistors differential pair PMOS (internal reference voltage set to 0.33*Vdda).

LL_OPAMP_TRIMMING_NMOS

OPAMP trimming of transistors differential pair NMOS (internal reference voltage set to 0.9*Vdda). Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS).

LL_OPAMP_TRIMMING_PMOS

OPAMP trimming of transistors differential pair PMOS (internal reference voltage set to 0.1*Vdda). Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS).

OPAMP helper macro

__LL_OPAMP_COMMON_INSTANCE

Description:

- Helper macro to select the OPAMP common instance to which is belonging the selected OPAMP instance.

Parameters:

- __OPAMPx__: OPAMP instance

Return value:

- OPAMP: common instance

Notes:

- OPAMP common register instance can be used to set parameters common to several OPAMP instances. Refer to functions having argument "OPAMPxy_COMMON" as parameter.

__LL_OPAMP_IS_ENABLED_ALL_COMMON_INSTANCE

Description:

- Helper macro to check if all OPAMP instances sharing the same OPAMP common instance are disabled.

Return value:

- 0: All OPAMP instances sharing the same OPAMP common instance are disabled. 1: At least one OPAMP instance sharing the same OPAMP common instance is enabled

Notes:

- This check is required by functions with setting conditioned to OPAMP state: All OPAMP instances of the OPAMP common group must be disabled. Refer to functions having argument "OPAMPxy_COMMON" as parameter.

Common write and read registers macro

LL_OPAMP_WriteReg

Description:

- Write a value in OPAMP LL_OPAMP_GetPowerModeregister.

Parameters:

- __INSTANCE__: OPAMP Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_OPAMP_ReadReg

Description:

- Read a value in OPAMP register.

Parameters:

- __INSTANCE__: OPAMP Instance
- __REG__: Register to be read

Return value:

- Register: value

119 LL PWR Generic Driver

119.1 PWR Firmware driver API description

The following section lists the various functions of the PWR library.

119.1.1 Detailed description of functions

LL_PWR_SetRegulModeDS

Function name

__STATIC_INLINE void LL_PWR_SetRegulModeDS (uint32_t RegulMode)

Function description

Set the voltage Regulator mode during deep sleep mode.

Parameters

- **RegulMode:** This parameter can be one of the following values:
  - LL_PWR_REGU_DSMODE_MAIN
  - LL_PWR_REGU_DSMODE_LOW_POWER

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 LPDS LL_PWR_SetRegulModeDS

LL_PWR_GetRegulModeDS

Function name

__STATIC_INLINE uint32_t LL_PWR_GetRegulModeDS (void)

Function description

Get the voltage Regulator mode during deep sleep mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_REGU_DSMODE_MAIN
  - LL_PWR_REGU_DSMODE_LOW_POWER

Reference Manual to LL API cross reference:

- CR1 LPDS LL_PWR_GetRegulModeDS

LL_PWR_EnablePVD

Function name

__STATIC_INLINE void LL_PWR_EnablePVD (void)

Function description

Enable Power Voltage Detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PVDEN LL_PWR_EnablePVD

LL_PWR_DisablePVD

Function name

__STATIC_INLINE void LL_PWR_DisablePVD (void)

Function description

Disable Power Voltage Detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PVDEN LL_PWR_DisablePVD

LL_PWR_IsEnabledPVD

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledPVD (void)

Function description

Check if Power Voltage Detector is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 PVDEN LL_PWR_IsEnabledPVD

LL_PWR_SetPVDLevel

Function name

__STATIC_INLINE void LL_PWR_SetPVDLevel (uint32_t PVDLevel)

Function description

Configure the voltage threshold detected by the Power Voltage Detector.

Parameters

- **PVDLevel:** This parameter can be one of the following values:
  - LL_PWR_PVDLEVEL_0
  - LL_PWR_PVDLEVEL_1
  - LL_PWR_PVDLEVEL_2
  - LL_PWR_PVDLEVEL_3
  - LL_PWR_PVDLEVEL_4
  - LL_PWR_PVDLEVEL_5
  - LL_PWR_PVDLEVEL_6
  - LL_PWR_PVDLEVEL_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PLS LL_PWR_SetPVDLevel

LL_PWR_GetPVDLevel

Function name

__STATIC_INLINE uint32_t LL_PWR_GetPVDLevel (void)

Function description

Get the voltage threshold detection.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_PVDLEVEL_0
  - LL_PWR_PVDLEVEL_1
  - LL_PWR_PVDLEVEL_2
  - LL_PWR_PVDLEVEL_3
  - LL_PWR_PVDLEVEL_4
  - LL_PWR_PVDLEVEL_5
  - LL_PWR_PVDLEVEL_6
  - LL_PWR_PVDLEVEL_7

Reference Manual to LL API cross reference:

- CR1 PLS LL_PWR_GetPVDLevel

LL_PWR_EnableBkUpAccess

Function name

__STATIC_INLINE void LL_PWR_EnableBkUpAccess (void)

Function description

Enable access to the backup domain.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 DBP LL_PWR_EnableBkUpAccess

LL_PWR_DisableBkUpAccess

Function name

__STATIC_INLINE void LL_PWR_DisableBkUpAccess (void)

Function description

Disable access to the backup domain.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 DBP LL_PWR_DisableBkUpAccess

LL_PWR_IsEnabledBkUpAccess

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledBkUpAccess (void)

Function description

Check if the backup domain is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 DBP LL_PWR_IsEnabledBkUpAccess

LL_PWR_EnableFlashPowerDown

Function name

__STATIC_INLINE void LL_PWR_EnableFlashPowerDown (void)

Function description

Enable the Flash Power Down in Stop Mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FLPS LL_PWR_EnableFlashPowerDown

LL_PWR_DisableFlashPowerDown

Function name

__STATIC_INLINE void LL_PWR_DisableFlashPowerDown (void)

Function description

Disable the Flash Power Down in Stop Mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 FLPS LL_PWR_DisableFlashPowerDown

LL_PWR_IsEnabledFlashPowerDown

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledFlashPowerDown (void)

Function description

Check if the Flash Power Down in Stop Mode is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 FLPS LL_PWR_IsEnabledFlashPowerDown

LL_PWR_SetStopModeRegulVoltageScaling

Function name

__STATIC_INLINE void LL_PWR_SetStopModeRegulVoltageScaling (uint32_t VoltageScaling)

Function description

Set the internal Regulator output voltage in STOP mode.

Parameters

- **VoltageScaling:** This parameter can be one of the following values:
  - LL_PWR_REGU_VOLTAGE_SVOS_SCALE3
  - LL_PWR_REGU_VOLTAGE_SVOS_SCALE4
  - LL_PWR_REGU_VOLTAGE_SVOS_SCALE5

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SVOS LL_PWR_SetStopModeRegulVoltageScaling

LL_PWR_GetStopModeRegulVoltageScaling

Function name

__STATIC_INLINE uint32_t LL_PWR_GetStopModeRegulVoltageScaling (void)

Function description

Get the internal Regulator output voltage in STOP mode.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_REGU_VOLTAGE_SVOS_SCALE3
  - LL_PWR_REGU_VOLTAGE_SVOS_SCALE4
  - LL_PWR_REGU_VOLTAGE_SVOS_SCALE5

Reference Manual to LL API cross reference:

- CR1 SVOS LL_PWR_GetStopModeRegulVoltageScaling

LL_PWR_EnableAVD

Function name

__STATIC_INLINE void LL_PWR_EnableAVD (void)

Function description

Enable Analog Power Voltage Detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 AVDEN LL_PWR_EnableAVD

LL_PWR_DisableAVD

Function name

__STATIC_INLINE void LL_PWR_DisableAVD (void)

Function description

Disable Analog Power Voltage Detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 AVDEN LL_PWR_DisableAVD

LL_PWR_IsEnabledAVD

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledAVD (void)

Function description

Check if Analog Power Voltage Detector is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 AVDEN LL_PWR_IsEnabledAVD

LL_PWR_SetAVDLevel

Function name

__STATIC_INLINE void LL_PWR_SetAVDLevel (uint32_t AVDLevel)

Function description

Configure the voltage threshold to be detected by the Analog Power Voltage Detector.

Parameters

- **AVDLevel:** This parameter can be one of the following values:
  - LL_PWR_AVDLEVEL_0
  - LL_PWR_AVDLEVEL_1
  - LL_PWR_AVDLEVEL_2
  - LL_PWR_AVDLEVEL_3

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ALS LL_PWR_SetAVDLevel

LL_PWR_GetAVDLevel

Function name

__STATIC_INLINE uint32_t LL_PWR_GetAVDLevel (void)

Function description

Get the Analog Voltage threshold to be detected by the Analog Power Voltage Detector.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_AVDLEVEL_0
  - LL_PWR_AVDLEVEL_1
  - LL_PWR_AVDLEVEL_2
  - LL_PWR_AVDLEVEL_3

Reference Manual to LL API cross reference:

- CR1 ALS LL_PWR_GetAVDLevel

LL_PWR_EnableBkUpRegulator

Function name

__STATIC_INLINE void LL_PWR_EnableBkUpRegulator (void)

Function description

Enable Backup Regulator.

Return values

- **None:**

Notes

- When set, the Backup Regulator (used to maintain backup SRAM content in Standby and VBAT modes) is enabled. If BRE is reset, the backup Regulator is switched off. The backup SRAM can still be used but its content will be lost in the Standby and VBAT modes. Once set, the application must wait that the Backup Regulator Ready flag (BRR) is set to indicate that the data written into the RAM will be maintained in the Standby and VBAT modes.

Reference Manual to LL API cross reference:

- CR2 BREN LL_PWR_EnableBkUpRegulator

LL_PWR_DisableBkUpRegulator

Function name

__STATIC_INLINE void LL_PWR_DisableBkUpRegulator (void)

Function description

Disable Backup Regulator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 BREN LL_PWR_DisableBkUpRegulator

LL_PWR_IsEnabledBkUpRegulator

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledBkUpRegulator (void)

Function description

Check if the backup Regulator is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 BREN LL_PWR_IsEnabledBkUpRegulator

LL_PWR_EnableMonitoring

Function name

__STATIC_INLINE void LL_PWR_EnableMonitoring (void)

Function description

Enable VBAT and Temperature monitoring.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 MONEN LL_PWR_EnableMonitoring

LL_PWR_DisableMonitoring

Function name

__STATIC_INLINE void LL_PWR_DisableMonitoring (void)

Function description

Disable VBAT and Temperature monitoring.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 MONEN LL_PWR_DisableMonitoring

LL_PWR_IsEnabledMonitoring

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledMonitoring (void)

Function description

Check if the VBAT and Temperature monitoring is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 MONEN LL_PWR_IsEnabledMonitoring

LL_PWR_ConfigSupply

Function name

__STATIC_INLINE void LL_PWR_ConfigSupply (uint32_t SupplySource)

Function description

Configure the PWR supply.

Parameters

- **SupplySource:** This parameter can be one of the following values:
  - LL_PWR_LDO_SUPPLY
  - LL_PWR_DIRECT_SMPS_SUPPLY
  - LL_PWR_SMPS_1V8_SUPPLIES_LDO
  - LL_PWR_SMPS_2V5_SUPPLIES_LDO
  - LL_PWR_SMPS_1V8_SUPPLIES_EXT_AND_LDO
  - LL_PWR_SMPS_2V5_SUPPLIES_EXT_AND_LDO
  - LL_PWR_SMPS_1V8_SUPPLIES_EXT
  - LL_PWR_SMPS_2V5_SUPPLIES_EXT
  - LL_PWR_EXTERNAL_SOURCE_SUPPLY

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 BYPASS LL_PWR_ConfigSupply
- CR3 LDOEN LL_PWR_ConfigSupply
- CR3 SMPSEN LL_PWR_ConfigSupply
- CR3 SMPSEXTHP LL_PWR_ConfigSupply
- CR3 SMPSLEVEL LL_PWR_ConfigSupply

LL_PWR_GetSupply

Function name

__STATIC_INLINE uint32_t LL_PWR_GetSupply (void)

Function description

Get the PWR supply.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_LDO_SUPPLY
  - LL_PWR_DIRECT_SMPS_SUPPLY
  - LL_PWR_SMPS_1V8_SUPPLIES_LDO
  - LL_PWR_SMPS_2V5_SUPPLIES_LDO
  - LL_PWR_SMPS_1V8_SUPPLIES_EXT_AND_LDO
  - LL_PWR_SMPS_2V5_SUPPLIES_EXT_AND_LDO
  - LL_PWR_SMPS_1V8_SUPPLIES_EXT

- CR3 SMPSEXTHP LL_PWR_GetSupply
- CR3 SMPSLEVEL LL_PWR_GetSupply

LL_PWR_EnableBatteryCharging

Function name

__STATIC_INLINE void LL_PWR_EnableBatteryCharging (void)

Function description

Enable battery charging.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 VBE LL_PWR_EnableBatteryCharging

LL_PWR_DisableBatteryCharging

Function name

__STATIC_INLINE void LL_PWR_DisableBatteryCharging (void)

Function description

Disable battery charging.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 VBE LL_PWR_DisableBatteryCharging

LL_PWR_IsEnabledBatteryCharging

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledBatteryCharging (void)

Function description

Check if battery charging is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 VBE LL_PWR_IsEnabledBatteryCharging

LL_PWR_SetBattChargResistor

Function name

__STATIC_INLINE void LL_PWR_SetBattChargResistor (uint32_t Resistor)

Function description

Set the Battery charge resistor impedance.

Parameters

- **Resistor:** This parameter can be one of the following values:
  - LL_PWR_BATT_CHARG_RESISTOR_5K
  - LL_PWR_BATT_CHARGRESISTOR_1_5K

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 VBRS LL_PWR_SetBattChargResistor

LL_PWR_GetBattChargResistor

Function name

__STATIC_INLINE uint32_t LL_PWR_GetBattChargResistor (void)

Function description

Get the Battery charge resistor impedance.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_BATT_CHARG_RESISTOR_5K
  - LL_PWR_BATT_CHARGRESISTOR_1_5K

Reference Manual to LL API cross reference:

- CR3 VBRS LL_PWR_GetBattChargResistor

LL_PWR_EnableUSBReg

Function name

__STATIC_INLINE void LL_PWR_EnableUSBReg (void)

Function description

Enable the USB regulator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 USBREGEN LL_PWR_EnableUSBReg

LL_PWR_DisableUSBReg

Function name

__STATIC_INLINE void LL_PWR_DisableUSBReg (void)

Function description

Disable the USB regulator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 USBREGEN LL_PWR_DisableUSBReg

LL_PWR_IsEnabledUSBReg

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledUSBReg (void)

Function description

Check if the USB regulator is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 USBREGEN LL_PWR_IsEnabledUSBReg

LL_PWR_EnableUSBVoltageDetector

Function name

__STATIC_INLINE void LL_PWR_EnableUSBVoltageDetector (void)

Function description

Enable the USB voltage detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 USB33DEN LL_PWR_EnableUSBVoltageDetector

LL_PWR_DisableUSBVoltageDetector

Function name

__STATIC_INLINE void LL_PWR_DisableUSBVoltageDetector (void)

Function description

Disable the USB voltage detector.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 USB33DEN LL_PWR_DisableUSBVoltageDetector

LL_PWR_IsEnabledUSBVoltageDetector

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledUSBVoltageDetector (void)

Function description

Check if the USB voltage detector is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 USB33DEN LL_PWR_IsEnabledUSBVoltageDetector

LL_PWR_CPU_SetD1PowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU_SetD1PowerMode (uint32_t PDMode)

Function description

Set the D1 domain Power Down mode when the CPU enters deepsleep.

Parameters

- **PDMode:** This parameter can be one of the following values:
  - LL_PWR_CPU_MODE_D1STOP
  - LL_PWR_CPU_MODE_D1STANDBY

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPUCR PDDS_D1 LL_PWR_CPU_SetD1PowerMode

LL_PWR_CPU2_SetD1PowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU2_SetD1PowerMode (uint32_t PDMode)

Function description

Set the D1 domain Power Down mode when the CPU2 enters deepsleep.

Parameters

- **PDMode:** This parameter can be one of the following values:
  - LL_PWR_CPU2_MODE_D1STOP
  - LL_PWR_CPU2_MODE_D1STANDBY

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPU2CR PDDS_D1 LL_PWR_CPU2_SetD1PowerMode

LL_PWR_CPU_GetD1PowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU_GetD1PowerMode (void)

Function description

Get the D1 Domain Power Down mode when the CPU enters deepsleep.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_CPU_MODE_D1STOP
  - LL_PWR_CPU_MODE_D1STANDBY

Reference Manual to LL API cross reference:

- CPUCR PDDS_D1 LL_PWR_CPU_GetD1PowerMode

LL_PWR_CPU2_GetD1PowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU2_GetD1PowerMode (void)

Function description

Get the D1 Domain Power Down mode when the CPU2 enters deepsleep.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_CPU2_MODE_D1STOP
  - LL_PWR_CPU2_MODE_D1STANDBY

Reference Manual to LL API cross reference:

- CPU2CR PDDS_D1 LL_PWR_CPU2_GetD1PowerMode

LL_PWR_CPU_SetD2PowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU_SetD2PowerMode (uint32_t PDMode)

Function description

Set the D2 domain Power Down mode when the CPU enters deepsleep.

Parameters

- **PDMode:** This parameter can be one of the following values:
  - LL_PWR_CPU_MODE_D2STOP
  - LL_PWR_CPU_MODE_D2STANDBY

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPUCR PDDS_D2 LL_PWR_CPU_SetD2PowerMode

LL_PWR_CPU2_SetD2PowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU2_SetD2PowerMode (uint32_t PDMode)

Function description

Set the D2 domain Power Down mode when the CPU2 enters deepsleep.

Parameters

- **PDMode:** This parameter can be one of the following values:
  - LL_PWR_CPU2_MODE_D2STOP
  - LL_PWR_CPU2_MODE_D2STANDBY

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPU2CR PDDS_D2 LL_PWR_CPU2_SetD2PowerMode

LL_PWR_CPU_GetD2PowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU_GetD2PowerMode (void)

Function description

Get the D2 Domain Power Down mode when the CPU enters deepsleep.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_CPU_MODE_D2STOP
  - LL_PWR_CPU_MODE_D2STANDBY

Reference Manual to LL API cross reference:

- CPUCR PDDS_D2 LL_PWR_CPU_GetD2PowerMode

LL_PWR_CPU2_GetD2PowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU2_GetD2PowerMode (void)

Function description

Get the D2 Domain Power Down mode when the CPU2 enters deepsleep.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_CPU2_MODE_D2STOP
  - LL_PWR_CPU2_MODE_D2STANDBY

Reference Manual to LL API cross reference:

- CPU2CR PDDS_D2 LL_PWR_CPU2_GetD2PowerMode

LL_PWR_CPU_SetD3PowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU_SetD3PowerMode (uint32_t PDMode)

Function description

Set the D3 domain Power Down mode when the CPU enters deepsleep.

Parameters

- **PDMode:** This parameter can be one of the following values:
  - LL_PWR_CPU_MODE_D3STOP
  - LL_PWR_CPU_MODE_D3STANDBY

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPUCR PDDS_D3 LL_PWR_CPU_SetD3PowerMode

LL_PWR_CPU2_SetD3PowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU2_SetD3PowerMode (uint32_t PDMode)

Function description

Set the D3 domain Power Down mode when the CPU2 enters deepsleep.

Parameters

- **PDMode:** This parameter can be one of the following values:
  - LL_PWR_CPU2_MODE_D3STOP
  - LL_PWR_CPU2_MODE_D3STANDBY

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPU2CR PDDS_D3 LL_PWR_CPU2_SetD3PowerMode

LL_PWR_CPU_GetD3PowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU_GetD3PowerMode (void)

Function description

Get the D3 Domain Power Down mode when the CPU enters deepsleep.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_CPU_MODE_D3STOP
  - LL_PWR_CPU_MODE_D3STANDBY

Reference Manual to LL API cross reference:

- CPUCR PDDS_D3 LL_PWR_CPU_GetD3PowerMode

LL_PWR_CPU2_GetD3PowerMode

Function name

Function description

Get the D3 Domain Power Down mode when the CPU2 enters deepsleep.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_CPU2_MODE_D3STOP
  - LL_PWR_CPU2_MODE_D3STANDBY

Reference Manual to LL API cross reference:

- CPU2CR PDDS_D3 LL_PWR_CPU2_GetD3PowerMode

LL_PWR_HoldCPU1

Function name

__STATIC_INLINE void LL_PWR_HoldCPU1 (void)

Function description

Hold the CPU1 and allocated peripherals when exiting from STOP mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPU2CR HOLD1 LL_PWR_HoldCPU1

LL_PWR_ReleaseCPU1

Function name

__STATIC_INLINE void LL_PWR_ReleaseCPU1 (void)

Function description

Release the CPU1 and allocated peripherals.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPU2CR HOLD1 LL_PWR_ReleaseCPU1

LL_PWR_IsCPU1Held

Function name

__STATIC_INLINE uint32_t LL_PWR_IsCPU1Held (void)

Function description

Ckeck if the CPU1 and allocated peripherals are held.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPU2CR HOLD1 LL_PWR_IsCPU1Held

LL_PWR_HoldCPU2

Function name

__STATIC_INLINE void LL_PWR_HoldCPU2 (void)

Function description

Hold the CPU2 and allocated peripherals when exiting from STOP mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPUCR HOLD2 LL_PWR_HoldCPU2

LL_PWR_ReleaseCPU2

Function name

__STATIC_INLINE void LL_PWR_ReleaseCPU2 (void)

Function description

Release the CPU2 and allocated peripherals.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPUCR HOLD2 LL_PWR_ReleaseCPU2

LL_PWR_IsCPU2Held

Function name

__STATIC_INLINE uint32_t LL_PWR_IsCPU2Held (void)

Function description

Ckeck if the CPU2 and allocated peripherals are held.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPUCR HOLD2 LL_PWR_IsCPU2Held

LL_PWR_CPU_EnableD3RunInLowPowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU_EnableD3RunInLowPowerMode (void)

Function description

D3 domain remains in Run mode regardless of CPU subsystem modes.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPUCR RUN_D3 LL_PWR_CPU_EnableD3RunInLowPowerMode

LL_PWR_CPU2_EnableD3RunInLowPowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU2_EnableD3RunInLowPowerMode (void)

Function description

D3 domain remains in Run mode regardless of CPU2 subsystem modes.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPU2CR RUN_D3 LL_PWR_CPU2_EnableD3RunInLowPowerMode

LL_PWR_CPU_DisableD3RunInLowPowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU_DisableD3RunInLowPowerMode (void)

Function description

D3 domain follows CPU subsystem modes.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPUCR RUN_D3 LL_PWR_CPU_DisableD3RunInLowPowerMode

LL_PWR_CPU2_DisableD3RunInLowPowerMode

Function name

__STATIC_INLINE void LL_PWR_CPU2_DisableD3RunInLowPowerMode (void)

Function description

D3 domain follows CPU2 subsystem modes.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPU2CR RUN_D3 LL_PWR_CPU2_DisableD3RunInLowPowerMode

LL_PWR_CPU_IsEnabledD3RunInLowPowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU_IsEnabledD3RunInLowPowerMode (void)

Function description

Check if D3 is kept in Run mode when CPU enters low power mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPUCR RUN_D3 LL_PWR_CPU_IsEnabledD3RunInLowPowerMode

LL_PWR_CPU2_IsEnabledD3RunInLowPowerMode

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU2_IsEnabledD3RunInLowPowerMode (void)

Function description

Check if D3 is kept in Run mode when CPU2 enters low power mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPU2CR RUN_D3 LL_PWR_CPU2_IsEnabledD3RunInLowPowerMode

LL_PWR_SetRegulVoltageScaling

Function name

__STATIC_INLINE void LL_PWR_SetRegulVoltageScaling (uint32_t VoltageScaling)

Function description

Set the main internal Regulator output voltage.

Parameters

- **VoltageScaling:** This parameter can be one of the following values:
  - LL_PWR_REGU_VOLTAGE_SCALE0
  - LL_PWR_REGU_VOLTAGE_SCALE1
  - LL_PWR_REGU_VOLTAGE_SCALE2
  - LL_PWR_REGU_VOLTAGE_SCALE3

Return values

- **None:**

Notes

- For all H7 lines except STM32H7Axxx and STM32H7Bxxx lines, VOS0 is applied when PWR_D3CR_VOS[1:0] = 0b11 and SYSCFG_PWRCR_ODEN = 0b1.

Reference Manual to LL API cross reference:

- D3CR VOS LL_PWR_SetRegulVoltageScaling

LL_PWR_GetRegulVoltageScaling

Function name

__STATIC_INLINE uint32_t LL_PWR_GetRegulVoltageScaling (void)

Function description

Get the main internal Regulator output voltage.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_REGU_VOLTAGE_SCALE0
  - LL_PWR_REGU_VOLTAGE_SCALE1
  - LL_PWR_REGU_VOLTAGE_SCALE2
  - LL_PWR_REGU_VOLTAGE_SCALE3

Notes

- For all H7 lines except STM32H7Axxx and STM32H7Bxxx lines, checking VOS0 need the check of PWR_D3CR_VOS[1:0] field and SYSCFG_PWRCR_ODEN bit.

Reference Manual to LL API cross reference:

- D3CR VOS LL_PWR_GetRegulVoltageScaling

LL_PWR_EnableWakeUpPin

Function name

__STATIC_INLINE void LL_PWR_EnableWakeUpPin (uint32_t WakeUpPin)

Function description

Enable the WakeUp PINx functionality.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPEPR WKUPEN1 LL_PWR_EnableWakeUpPin
- WKUPEPR WKUPEN2 LL_PWR_EnableWakeUpPin
- WKUPEPR WKUPEN3 LL_PWR_EnableWakeUpPin
- WKUPEPR WKUPEN4 LL_PWR_EnableWakeUpPin
- WKUPEPR WKUPEN5 LL_PWR_EnableWakeUpPin
- WKUPEPR WKUPEN6 LL_PWR_EnableWakeUpPin

LL_PWR_DisableWakeUpPin

Function name

__STATIC_INLINE void LL_PWR_DisableWakeUpPin (uint32_t WakeUpPin)

Function description

Disable the WakeUp PINx functionality.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPEPR WKUPEN1 LL_PWR_DisableWakeUpPin
- WKUPEPR WKUPEN2 LL_PWR_DisableWakeUpPin
- WKUPEPR WKUPEN3 LL_PWR_DisableWakeUpPin
- WKUPEPR WKUPEN4 LL_PWR_DisableWakeUpPin
- WKUPEPR WKUPEN5 LL_PWR_DisableWakeUpPin
- WKUPEPR WKUPEN6 LL_PWR_DisableWakeUpPin

LL_PWR_IsEnabledWakeUpPin

Function name

__STATIC_INLINE uint32_t LL_PWR_IsEnabledWakeUpPin (uint32_t WakeUpPin)

Function description

Check if the WakeUp PINx functionality is enabled.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WKUPEPR WKUPEN5 LL_PWR_IsEnabledWakeUpPin
- WKUPEPR WKUPEN6 LL_PWR_IsEnabledWakeUpPin

LL_PWR_SetWakeUpPinPolarityLow

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinPolarityLow (uint32_t WakeUpPin)

Function description

Set the Wake-Up pin polarity low for the event detection.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPEPR WKUPP1 LL_PWR_SetWakeUpPinPolarityLow
- WKUPEPR WKUPP2 LL_PWR_SetWakeUpPinPolarityLow
- WKUPEPR WKUPP3 LL_PWR_SetWakeUpPinPolarityLow
- WKUPEPR WKUPP4 LL_PWR_SetWakeUpPinPolarityLow
- WKUPEPR WKUPP5 LL_PWR_SetWakeUpPinPolarityLow
- WKUPEPR WKUPP6 LL_PWR_SetWakeUpPinPolarityLow

LL_PWR_SetWakeUpPinPolarityHigh

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinPolarityHigh (uint32_t WakeUpPin)

Function description

Set the Wake-Up pin polarity high for the event detection.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPEPR WKUPP1 LL_PWR_SetWakeUpPinPolarityHigh
- WKUPEPR WKUPP2 LL_PWR_SetWakeUpPinPolarityHigh
- WKUPEPR WKUPP3 LL_PWR_SetWakeUpPinPolarityHigh
- WKUPEPR WKUPP4 LL_PWR_SetWakeUpPinPolarityHigh
- WKUPEPR WKUPP5 LL_PWR_SetWakeUpPinPolarityHigh
- WKUPEPR WKUPP6 LL_PWR_SetWakeUpPinPolarityHigh

LL_PWR_IsWakeUpPinPolarityLow

Function name

__STATIC_INLINE uint32_t LL_PWR_IsWakeUpPinPolarityLow (uint32_t WakeUpPin)

Function description

Get the Wake-Up pin polarity for the event detection.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WKUPEPR WKUPP1 LL_PWR_IsWakeUpPinPolarityLow
- WKUPEPR WKUPP2 LL_PWR_IsWakeUpPinPolarityLow
- WKUPEPR WKUPP3 LL_PWR_IsWakeUpPinPolarityLow
- WKUPEPR WKUPP4 LL_PWR_IsWakeUpPinPolarityLow
- WKUPEPR WKUPP5 LL_PWR_IsWakeUpPinPolarityLow
- WKUPEPR WKUPP6 LL_PWR_IsWakeUpPinPolarityLow

LL_PWR_SetWakeUpPinPullNone

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinPullNone (uint32_t WakeUpPin)

Function description

Set the Wake-Up pin Pull None.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPEPR WKUPPUPD1 LL_PWR_SetWakeUpPinPullNone
- WKUPEPR WKUPPUPD2 LL_PWR_SetWakeUpPinPullNone
- WKUPEPR WKUPPUPD3 LL_PWR_SetWakeUpPinPullNone
- WKUPEPR WKUPPUPD4 LL_PWR_SetWakeUpPinPullNone
- WKUPEPR WKUPPUPD5 LL_PWR_SetWakeUpPinPullNone
- WKUPEPR WKUPPUPD6 LL_PWR_SetWakeUpPinPullNone

LL_PWR_SetWakeUpPinPullUp

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinPullUp (uint32_t WakeUpPin)

Function description

Set the Wake-Up pin Pull Up.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPEPR WKUPPUPD1 LL_PWR_SetWakeUpPinPullUp
- WKUPEPR WKUPPUPD2 LL_PWR_SetWakeUpPinPullUp
- WKUPEPR WKUPPUPD3 LL_PWR_SetWakeUpPinPullUp
- WKUPEPR WKUPPUPD4 LL_PWR_SetWakeUpPinPullUp
- WKUPEPR WKUPPUPD5 LL_PWR_SetWakeUpPinPullUp
- WKUPEPR WKUPPUPD6 LL_PWR_SetWakeUpPinPullUp

LL_PWR_SetWakeUpPinPullDown

Function name

__STATIC_INLINE void LL_PWR_SetWakeUpPinPullDown (uint32_t WakeUpPin)

Function description

Set the Wake-Up pin Pull Down.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPEPR WKUPPUPD1 LL_PWR_SetWakeUpPinPullDown
- WKUPEPR WKUPPUPD2 LL_PWR_SetWakeUpPinPullDown
- WKUPEPR WKUPPUPD3 LL_PWR_SetWakeUpPinPullDown
- WKUPEPR WKUPPUPD4 LL_PWR_SetWakeUpPinPullDown
- WKUPEPR WKUPPUPD5 LL_PWR_SetWakeUpPinPullDown
- WKUPEPR WKUPPUPD6 LL_PWR_SetWakeUpPinPullDown

LL_PWR_GetWakeUpPinPull

Function name

__STATIC_INLINE uint32_t LL_PWR_GetWakeUpPinPull (uint32_t WakeUpPin)

Function description

Get the Wake-Up pin pull.

Parameters

- **WakeUpPin:** This parameter can be one of the following values:
  - LL_PWR_WAKEUP_PIN1
  - LL_PWR_WAKEUP_PIN2
  - LL_PWR_WAKEUP_PIN3 (*)
  - LL_PWR_WAKEUP_PIN4
  - LL_PWR_WAKEUP_PIN5 (*)
  - LL_PWR_WAKEUP_PIN6

  (*) value not defined in all devices.

Return values

- **Returned:** value can be one of the following values:
  - LL_PWR_WAKEUP_PIN_NOPULL
  - LL_PWR_WAKEUP_PIN_PULLUP
  - LL_PWR_WAKEUP_PIN_PULLDOWN

Reference Manual to LL API cross reference:

- WKUPEPR WKUPPUPD1 LL_PWR_GetWakeUpPinPull
- WKUPEPR WKUPPUPD2 LL_PWR_GetWakeUpPinPull
- WKUPEPR WKUPPUPD3 LL_PWR_GetWakeUpPinPull
- WKUPEPR WKUPPUPD4 LL_PWR_GetWakeUpPinPull
- WKUPEPR WKUPPUPD5 LL_PWR_GetWakeUpPinPull
- WKUPEPR WKUPPUPD6 LL_PWR_GetWakeUpPinPull

LL_PWR_IsActiveFlag_PVDO

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_PVDO (void)

Function description

Indicate whether VDD voltage is below the selected PVD threshold.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR1 PVDO LL_PWR_IsActiveFlag_PVDO

LL_PWR_IsActiveFlag_ACTVOS

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_ACTVOS (void)

Function description

Indicate whether the voltage level is ready for current actual used VOS.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR1 ACTVOSRDY LL_PWR_IsActiveFlag_ACTVOS

LL_PWR_IsActiveFlag_AVDO

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_AVDO (void)

Function description

Indicate whether VDDA voltage is below the selected AVD threshold.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR1 AVDO LL_PWR_IsActiveFlag_AVDO

LL_PWR_IsActiveFlag_BRR

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_BRR (void)

Function description

Get Backup Regulator ready Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 BRRDY LL_PWR_IsActiveFlag_BRR

LL_PWR_IsActiveFlag_VBATL

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VBATL (void)

Function description

Indicate whether the VBAT level is above or below low threshold.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 VBATL LL_PWR_IsActiveFlag_VBATL

LL_PWR_IsActiveFlag_VBATH

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VBATH (void)

Function description

Indicate whether the VBAT level is above or below high threshold.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 VBATH LL_PWR_IsActiveFlag_VBATH

LL_PWR_IsActiveFlag_TEMPL

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_TEMPL (void)

Function description

Indicate whether the CPU temperature level is above or below low threshold.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 TEMPL LL_PWR_IsActiveFlag_TEMPL

LL_PWR_IsActiveFlag_TEMPH

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_TEMPH (void)

Function description

Indicate whether the CPU temperature level is above or below high threshold.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 TEMPH LL_PWR_IsActiveFlag_TEMPH

LL_PWR_IsActiveFlag_SMPSEXT

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_SMPSEXT (void)

Function description

Indicate whether the SMPS external supply is ready or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 SMPSEXTRDY LL_PWR_IsActiveFlag_SMPSEXT

LL_PWR_IsActiveFlag_USB

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_USB (void)

Function description

Indicate whether the USB supply is ready or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 USBRDY LL_PWR_IsActiveFlag_USB

LL_PWR_IsActiveFlag_HOLD2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_HOLD2 (void)

Function description

Get HOLD2 Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPUCR HOLD2F LL_PWR_IsActiveFlag_HOLD2

LL_PWR_IsActiveFlag_HOLD1

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_HOLD1 (void)

Function description

Get HOLD1 Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPU2CR HOLD1F LL_PWR_IsActiveFlag_HOLD1

LL_PWR_CPU_IsActiveFlag_STOP

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU_IsActiveFlag_STOP (void)

Function description

Get CPU System Stop Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPUCR STOPF LL_PWR_CPU_IsActiveFlag_STOP

LL_PWR_CPU2_IsActiveFlag_STOP

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU2_IsActiveFlag_STOP (void)

Function description

Get CPU2 System Stop Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPU2CR STOPF LL_PWR_CPU2_IsActiveFlag_STOP

LL_PWR_CPU_IsActiveFlag_SB

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU_IsActiveFlag_SB (void)

Function description

Get CPU System Standby Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPUCR SBF LL_PWR_CPU_IsActiveFlag_SB

LL_PWR_CPU2_IsActiveFlag_SB

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU2_IsActiveFlag_SB (void)

Function description

Get CPU2 System Standby Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPU2CR SBF LL_PWR_CPU2_IsActiveFlag_SB

LL_PWR_CPU_IsActiveFlag_SB_D1

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU_IsActiveFlag_SB_D1 (void)

Function description

Get CPU D1 Domain Standby Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPUCR SBF_D1 LL_PWR_CPU_IsActiveFlag_SB_D1

LL_PWR_CPU2_IsActiveFlag_SB_D1

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU2_IsActiveFlag_SB_D1 (void)

Function description

Get CPU2 D1 Domain Standby Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPU2CR SBF_D1 LL_PWR_CPU2_IsActiveFlag_SB_D1

LL_PWR_CPU_IsActiveFlag_SB_D2

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU_IsActiveFlag_SB_D2 (void)

Function description

Get CPU D2 Domain Standby Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPUCR SBF_D2 LL_PWR_CPU_IsActiveFlag_SB_D2

LL_PWR_CPU2_IsActiveFlag_SB_D2

Function name

__STATIC_INLINE uint32_t LL_PWR_CPU2_IsActiveFlag_SB_D2 (void)

Function description

Get CPU2 D2 Domain Standby Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CPU2CR SBF_D2 LL_PWR_CPU2_IsActiveFlag_SB_D2

LL_PWR_IsActiveFlag_VOS

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_VOS (void)

Function description

Indicate whether the Regulator is ready in the selected voltage range or if its output voltage is still changing to the required voltage level.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- D3CR VOSRDY LL_PWR_IsActiveFlag_VOS

LL_PWR_IsActiveFlag_WU6

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU6 (void)

Function description

Get Wake-up Flag 6.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WKUPFR WKUPF6 LL_PWR_IsActiveFlag_WU6

LL_PWR_IsActiveFlag_WU5

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU5 (void)

Function description

Get Wake-up Flag 5.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WKUPFR WKUPF5 LL_PWR_IsActiveFlag_WU5

LL_PWR_IsActiveFlag_WU4

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU4 (void)

Function description

Get Wake-up Flag 4.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WKUPFR WKUPF4 LL_PWR_IsActiveFlag_WU4

LL_PWR_IsActiveFlag_WU3

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU3 (void)

Function description

Get Wake-up Flag 3.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WKUPFR WKUPF3 LL_PWR_IsActiveFlag_WU3

LL_PWR_IsActiveFlag_WU2

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU2 (void)

Function description

Get Wake-up Flag 2.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WKUPFR WKUPF2 LL_PWR_IsActiveFlag_WU2

LL_PWR_IsActiveFlag_WU1

Function name

__STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU1 (void)

Function description

Get Wake-up Flag 1.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- WKUPFR WKUPF1 LL_PWR_IsActiveFlag_WU1

LL_PWR_ClearFlag_CPU

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_CPU (void)

Function description

Clear CPU STANDBY, STOP and HOLD flags.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPUCR CSSF LL_PWR_ClearFlag_CPU

LL_PWR_ClearFlag_CPU2

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_CPU2 (void)

Function description

Clear CPU2 STANDBY, STOP and HOLD flags.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CPU2CR CSSF LL_PWR_ClearFlag_CPU2

LL_PWR_ClearFlag_WU6

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_WU6 (void)

Function description

Clear Wake-up Flag 6.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPCR WKUPC6 LL_PWR_ClearFlag_WU6

LL_PWR_ClearFlag_WU5

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_WU5 (void)

Function description

Clear Wake-up Flag 5.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPCR WKUPC5 LL_PWR_ClearFlag_WU5

LL_PWR_ClearFlag_WU4

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_WU4 (void)

Function description

Clear Wake-up Flag 4.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPCR WKUPC4 LL_PWR_ClearFlag_WU4

LL_PWR_ClearFlag_WU3

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_WU3 (void)

Function description

Clear Wake-up Flag 3.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPCR WKUPC3 LL_PWR_ClearFlag_WU3

LL_PWR_ClearFlag_WU2

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_WU2 (void)

Function description

Clear Wake-up Flag 2.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPCR WKUPC2 LL_PWR_ClearFlag_WU2

LL_PWR_ClearFlag_WU1

Function name

__STATIC_INLINE void LL_PWR_ClearFlag_WU1 (void)

Function description

Clear Wake-up Flag 1.

Return values

- **None:**

Reference Manual to LL API cross reference:

- WKUPCR WKUPC1 LL_PWR_ClearFlag_WU1

LL_PWR_DeInit

Function name

ErrorStatus LL_PWR_DeInit (void)

Function description

De-initialize the PWR registers to their default reset values.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: PWR registers are de-initialized
  - ERROR: not applicable

119.2 PWR Firmware driver defines

The following section lists the various define and macros of the module.

119.2.1 PWR

PWR

Power Analog Voltage Level Detector

LL_PWR_AVDLEVEL_0

Analog Voltage threshold detected by AVD 1.7 V

LL_PWR_AVDLEVEL_1

Analog Voltage threshold detected by AVD 2.1 V

LL_PWR_AVDLEVEL_2

Analog Voltage threshold detected by AVD 2.5 V

LL_PWR_AVDLEVEL_3

Analog Voltage threshold detected by AVD 2.8 V

Battery Charge Resistor

LL_PWR_BATT_CHARG_RESISTOR_5K

Charge the Battery through a 5 kO resistor

LL_PWR_BATT_CHARGRESISTOR_1_5K

Charge the Battery through a 1.5 kO resistor

Clear Flags Defines

LL_PWR_FLAG_CPU_CSSF

Clear flags for CPU

LL_PWR_FLAG_CPU2_CSSF

Clear flags for CPU2

LL_PWR_FLAG_WKUPCR_WKUPC6

Clear PC1 WKUP flag

LL_PWR_FLAG_WKUPCR_WKUPC5

Clear PI11 WKUP flag

LL_PWR_FLAG_WKUPCR_WKUPC4

Clear PC13 WKUP flag

LL_PWR_FLAG_WKUPCR_WKUPC3

Clear PI8 WKUP flag

LL_PWR_FLAG_WKUPCR_WKUPC2

Clear PA2 WKUP flag

LL_PWR_FLAG_WKUPCR_WKUPC1

Clear PA0 WKUP flag

Get Flags Defines

LL_PWR_FLAG_AVDO

Analog voltage detector output on VDDA flag

LL_PWR_FLAG_PVDO

Programmable voltage detect output flag

LL_PWR_FLAG_ACTVOS

Current VOS applied for VCORE voltage scaling flag

LL_PWR_FLAG_ACTVOSRDY

Ready bit for current actual used VOS for VCORE voltage scaling flag

LL_PWR_FLAG_TEMPH

Temperature high threshold flag

LL_PWR_FLAG_TEMPL

Temperature low threshold flag

LL_PWR_FLAG_VBATH

VBAT high threshold flag

LL_PWR_FLAG_VBATL

VBAT low threshold flag

LL_PWR_FLAG_BRRDY

Backup Regulator ready flag

LL_PWR_FLAG_USBRDY

USB supply ready flag

LL_PWR_FLAG_SMPSEXTRDY

SMPS External supply ready flag

LL_PWR_FLAG_CPU_SBF_D2

D2 domain DSTANDBY Flag

LL_PWR_FLAG_CPU_SBF_D1

D1 domain DSTANDBY Flag

LL_PWR_FLAG_CPU_SBF

System STANDBY Flag

LL_PWR_FLAG_CPU_STOPF

STOP Flag

LL_PWR_FLAG_CPU_HOLD2F

CPU2 in hold wakeup flag

LL_PWR_FLAG_CPU2_SBF_D2

D2 domain DSTANDBY Flag

LL_PWR_FLAG_CPU2_SBF_D1

D1 domain DSTANDBY Flag

LL_PWR_FLAG_CPU2_SBF

System STANDBY Flag

LL_PWR_FLAG_CPU2_STOPF

STOP Flag

LL_PWR_FLAG_CPU2_HOLD1F

CPU1 in hold wakeup flag

LL_PWR_D3CR_VOSRDY

Voltage scaling ready flag

LL_PWR_WKUPFR_WKUPF6

Wakeup flag on PC1

LL_PWR_WKUPFR_WKUPF5

Wakeup flag on PI11

LL_PWR_WKUPFR_WKUPF4

Wakeup flag on PC13

LL_PWR_WKUPFR_WKUPF3

Wakeup flag on PI8

LL_PWR_WKUPFR_WKUPF2

Wakeup flag on PA2

LL_PWR_WKUPFR_WKUPF1

Wakeup flag on PA0

Power mode

LL_PWR_CPU_MODE_D1STOP

Enter D1 domain to Stop mode when the CPU enters deepsleep

LL_PWR_CPU_MODE_D1STANDBY

Enter D1 domain to Standby mode when the CPU enters deepsleep

LL_PWR_CPU_MODE_D2STOP

Enter D2 domain to Stop mode when the CPU enters deepsleep

LL_PWR_CPU_MODE_D2STANDBY

Enter D2 domain to Standby mode when the CPU enters deepsleep

LL_PWR_CPU_MODE_D3RUN

Keep system D3 domain in Run mode when the CPU enter deepsleep

LL_PWR_CPU_MODE_D3STOP

Enter D3 domain to Stop mode when the CPU enters deepsleep

LL_PWR_CPU_MODE_D3STANDBY

Enter D3 domain to Standby mode when the CPU enters deepsleep

LL_PWR_CPU2_MODE_D1STOP

Enter D1 domain to Stop mode when the CPU2 enters deepsleep

LL_PWR_CPU2_MODE_D1STANDBY

Enter D1 domain to Standby mode when the CPU2 enters deepsleep

LL_PWR_CPU2_MODE_D2STOP

Enter D2 domain to Stop mode when the CPU2 enters deepsleep

LL_PWR_CPU2_MODE_D2STANDBY

Enter D2 domain to Standby mode when the CPU2 enters deepsleep

LL_PWR_CPU2_MODE_D3RUN

Keep system D3 domain in RUN mode when the CPU2 enter deepsleep

LL_PWR_CPU2_MODE_D3STOP

Enter D3 domain to Stop mode when the CPU2 enters deepsleep

LL_PWR_CPU2_MODE_D3STANDBY

Enter D3 domain to Standby mode when the CPU2 enter deepsleep

Power Digital Voltage Level Detector

LL_PWR_PVDLEVEL_0

Voltage threshold detected by PVD 1.95 V

LL_PWR_PVDLEVEL_1

Voltage threshold detected by PVD 2.1 V

LL_PWR_PVDLEVEL_2

Voltage threshold detected by PVD 2.25 V

LL_PWR_PVDLEVEL_3

Voltage threshold detected by PVD 2.4 V

LL_PWR_PVDLEVEL_4

Voltage threshold detected by PVD 2.55 V

LL_PWR_PVDLEVEL_5

Voltage threshold detected by PVD 2.7 V

LL_PWR_PVDLEVEL_6

Voltage threshold detected by PVD 2.85 V

LL_PWR_PVDLEVEL_7

External voltage level on PVD_IN pin, compared to internal VREFINT level.

Regulator Mode In Deep Sleep Mode

LL_PWR_REGU_DSMODE_MAIN

Voltage Regulator in main mode during deepsleep mode

LL_PWR_REGU_DSMODE_LOW_POWER

Voltage Regulator in low-power mode during deepsleep mode

Run mode Regulator Voltage Scaling

LL_PWR_REGU_VOLTAGE_SCALE3

Select voltage scale 3

LL_PWR_REGU_VOLTAGE_SCALE2

Select voltage scale 2

LL_PWR_REGU_VOLTAGE_SCALE1

Select voltage scale 1

LL_PWR_REGU_VOLTAGE_SCALE0

Select voltage scale 0

Stop mode Regulator Voltage Scaling

LL_PWR_REGU_VOLTAGE_SVOS_SCALE5

Select voltage scale 5 when system enters STOP mode

LL_PWR_REGU_VOLTAGE_SVOS_SCALE4

Select voltage scale 4 when system enters STOP mode

LL_PWR_REGU_VOLTAGE_SVOS_SCALE3

Select voltage scale 3 when system enters STOP mode

Power supply source configuration

LL_PWR_LDO_SUPPLY

Core domains are supplied from the LDO

LL_PWR_DIRECT_SMPS_SUPPLY

Core domains are supplied from the SMPS

LL_PWR_SMPS_1V8_SUPPLIES_LDO

The SMPS 1.8V output supplies the LDO which supplies the Core domains

LL_PWR_SMPS_2V5_SUPPLIES_LDO

The SMPS 2.5V output supplies the LDO which supplies the Core domains

LL_PWR_SMPS_1V8_SUPPLIES_EXT_AND_LDO

The SMPS 1.8V output supplies an external circuits and the LDO. The Core domains are supplied from the LDO

LL_PWR_SMPS_2V5_SUPPLIES_EXT_AND_LDO

The SMPS 2.5V output supplies an external circuits and the LDO. The Core domains are supplied from the LDO

LL_PWR_SMPS_1V8_SUPPLIES_EXT

The SMPS 1.8V output supplies an external source which supplies the Core domains

LL_PWR_SMPS_2V5_SUPPLIES_EXT

The SMPS 2.5V output supplies an external source which supplies the Core domains

LL_PWR_EXTERNAL_SOURCE_SUPPLY

The SMPS and the LDO are Bypassed. The Core domains are supplied from an external source

Wakeup Pins

LL_PWR_WAKEUP_PIN1

Wake-Up pin 1 : PA0

LL_PWR_WAKEUP_PIN2

Wake-Up pin 2 : PA2

LL_PWR_WAKEUP_PIN3

Wake-Up pin 3 : PI8

LL_PWR_WAKEUP_PIN4

Wake-Up pin 4 : PC13

LL_PWR_WAKEUP_PIN5

Wake-Up pin 5 : PI11

LL_PWR_WAKEUP_PIN6

Wake-Up pin 6 : PC1

Wakeup Pins pull configuration

LL_PWR_WAKEUP_PIN_NOPULL

Configure Wake-Up pin in no pull

LL_PWR_WAKEUP_PIN_PULLUP

Configure Wake-Up pin in pull Up

LL_PWR_WAKEUP_PIN_PULLDOWN

Configure Wake-Up pin in pull Down

Common write and read registers Macros

LL_PWR_WriteReg

Description:

- Write a value in PWR register.

Parameters:

- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_PWR_ReadReg

Description:

- Read a value in PWR register.

Parameters:

- __REG__: Register to be read

Return value:

- Register: value

Wake-Up Pins register offsets Defines

LL_PWR_WAKEUP_PINS_PULL_SHIFT_OFFSET

LL_PWR_WAKEUP_PINS_MAX_SHIFT_MASK

120 LL RCC Generic Driver

120.1 RCC Firmware driver registers structures

120.1.1 LL_RCC_ClocksTypeDef

LL_RCC_ClocksTypeDef is defined in the stm32h7xx_ll_rcc.h

Data Fields

- ***uint32_t SYSCLK_Frequency***
- ***uint32_t CPUCLK_Frequency***
- ***uint32_t HCLK_Frequency***
- ***uint32_t PCLK1_Frequency***
- ***uint32_t PCLK2_Frequency***
- ***uint32_t PCLK3_Frequency***
- ***uint32_t PCLK4_Frequency***

Field Documentation

- ***uint32_t LL_RCC_ClocksTypeDef::SYSCLK_Frequency***
- ***uint32_t LL_RCC_ClocksTypeDef::CPUCLK_Frequency***
- ***uint32_t LL_RCC_ClocksTypeDef::HCLK_Frequency***
- ***uint32_t LL_RCC_ClocksTypeDef::PCLK1_Frequency***

120.2 RCC Firmware driver API description

The following section lists the various functions of the RCC library.

120.2.1 Detailed description of functions

LL_RCC_HSE_EnableCSS

Function name

__STATIC_INLINE void LL_RCC_HSE_EnableCSS (void)

Function description

Enable the Clock Security System.

Return values

- **None:**

Notes

- Once HSE Clock Security System is enabled it cannot be changed anymore unless a reset occurs or system enter in standby mode.

Reference Manual to LL API cross reference:

- CR CSSHSEON LL_RCC_HSE_EnableCSS

LL_RCC_HSE_EnableBypass

Function name

__STATIC_INLINE void LL_RCC_HSE_EnableBypass (void)

Function description

Enable HSE external oscillator (HSE Bypass)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEBYP LL_RCC_HSE_EnableBypass

LL_RCC_HSE_DisableBypass

Function name

__STATIC_INLINE void LL_RCC_HSE_DisableBypass (void)

Function description

Disable HSE external oscillator (HSE Bypass)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEBYP LL_RCC_HSE_DisableBypass

LL_RCC_HSE_Enable

Function name

__STATIC_INLINE void LL_RCC_HSE_Enable (void)

Function description

Enable HSE crystal oscillator (HSE ON)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEON LL_RCC_HSE_Enable

LL_RCC_HSE_Disable

Function name

__STATIC_INLINE void LL_RCC_HSE_Disable (void)

Function description

Disable HSE crystal oscillator (HSE ON)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSEON LL_RCC_HSE_Disable

LL_RCC_HSE_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSE_IsReady (void)

Function description

Check if HSE oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSERDY LL_RCC_HSE_IsReady

LL_RCC_HSI_Enable

Function name

__STATIC_INLINE void LL_RCC_HSI_Enable (void)

Function description

Enable HSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSION LL_RCC_HSI_Enable

LL_RCC_HSI_Disable

Function name

__STATIC_INLINE void LL_RCC_HSI_Disable (void)

Function description

Disable HSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSION LL_RCC_HSI_Disable

LL_RCC_HSI_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_IsReady (void)

Function description

Check if HSI clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSIRDY LL_RCC_HSI_IsReady

LL_RCC_HSI_IsDividerReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_IsDividerReady (void)

Function description

Check if HSI new divider applied and ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSIDIVF LL_RCC_HSI_IsDividerReady

LL_RCC_HSI_SetDivider

Function name

__STATIC_INLINE void LL_RCC_HSI_SetDivider (uint32_t Divider)

Function description

Set HSI divider.

Parameters

- **Divider:** This parameter can be one of the following values:
  - LL_RCC_HSI_DIV1
  - LL_RCC_HSI_DIV2
  - LL_RCC_HSI_DIV4
  - LL_RCC_HSI_DIV8

Return values

- **None.:**

Reference Manual to LL API cross reference:

- CR HSIDIV LL_RCC_HSI_SetDivider

LL_RCC_HSI_GetDivider

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_GetDivider (void)

Function description

Get HSI divider.

Return values

- **can:** be one of the following values:
  - LL_RCC_HSI_DIV1
  - LL_RCC_HSI_DIV2
  - LL_RCC_HSI_DIV4
  - LL_RCC_HSI_DIV8

Reference Manual to LL API cross reference:

- CR HSIDIV LL_RCC_HSI_GetDivider

LL_RCC_HSI_EnableStopMode

Function name

__STATIC_INLINE void LL_RCC_HSI_EnableStopMode (void)

Function description

Enable HSI oscillator in Stop mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSIKERON LL_RCC_HSI_EnableStopMode

LL_RCC_HSI_DisableStopMode

Function name

__STATIC_INLINE void LL_RCC_HSI_DisableStopMode (void)

Function description

Disable HSI oscillator in Stop mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSION LL_RCC_HSI_DisableStopMode

LL_RCC_HSI_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_GetCalibration (void)

Function description

Get HSI Calibration value.

Return values

- **A:** value between 0 and 4095 (0xFFF)

Notes

- When HSITRIM is written, HSICAL is updated with the sum of HSITRIM and the factory trim value

Reference Manual to LL API cross reference:

- HSICFGR HSICAL LL_RCC_HSI_GetCalibration

LL_RCC_HSI_SetCalibTrimming

Function name

__STATIC_INLINE void LL_RCC_HSI_SetCalibTrimming (uint32_t Value)

Function description

Set HSI Calibration trimming.

Parameters

- **Value:** can be a value between 0 and 127 (63 for Cut1.x)

Return values

- **None:**

Notes

- user-programmable trimming value that is added to the HSICAL
- Default value is 64 (32 for Cut1.x), which, when added to the HSICAL value, should trim the HSI to 64 MHz +/- 1 %

Reference Manual to LL API cross reference:

- HSICFGR HSITRIM LL_RCC_HSI_SetCalibTrimming

LL_RCC_HSI_GetCalibTrimming

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI_GetCalibTrimming (void)

Function description

Get HSI Calibration trimming.

Return values

- **A:** value between 0 and 127 (63 for Cut1.x)

Reference Manual to LL API cross reference:

- HSICFGR HSITRIM LL_RCC_HSI_GetCalibTrimming

LL_RCC_CSI_Enable

Function name

__STATIC_INLINE void LL_RCC_CSI_Enable (void)

Function description

Enable CSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CSION LL_RCC_CSI_Enable

LL_RCC_CSI_Disable

Function name

__STATIC_INLINE void LL_RCC_CSI_Disable (void)

Function description

Disable CSI oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CSION LL_RCC_CSI_Disable

LL_RCC_CSI_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_CSI_IsReady (void)

Function description

Check if CSI clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CSIRDY LL_RCC_CSI_IsReady

LL_RCC_CSI_EnableStopMode

Function name

__STATIC_INLINE void LL_RCC_CSI_EnableStopMode (void)

Function description

Enable CSI oscillator in Stop mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CSIKERON LL_RCC_CSI_EnableStopMode

LL_RCC_CSI_DisableStopMode

Function name

__STATIC_INLINE void LL_RCC_CSI_DisableStopMode (void)

Function description

Disable CSI oscillator in Stop mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CSIKERON LL_RCC_CSI_DisableStopMode

LL_RCC_CSI_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_CSI_GetCalibration (void)

Function description

Get CSI Calibration value.

Return values

- **A:** value between 0 and 255 (0xFF)

Notes

- When CSITRIM is written, CSICAL is updated with the sum of CSITRIM and the factory trim value

Reference Manual to LL API cross reference:

- CSICFGR CSICAL LL_RCC_CSI_GetCalibration

LL_RCC_CSI_SetCalibTrimming

Function name

__STATIC_INLINE void LL_RCC_CSI_SetCalibTrimming (uint32_t Value)

Function description

Set CSI Calibration trimming.

Parameters

- **Value:** can be a value between 0 and 31

Return values

- **None:**

Notes

- user-programmable trimming value that is added to the CSICAL
- Default value is 16, which, when added to the CSICAL value, should trim the CSI to 4 MHz +/- 1 %

Reference Manual to LL API cross reference:

- CSICFGR CSITRIM LL_RCC_CSI_SetCalibTrimming

LL_RCC_CSI_GetCalibTrimming

Function name

__STATIC_INLINE uint32_t LL_RCC_CSI_GetCalibTrimming (void)

Function description

Get CSI Calibration trimming.

Return values

- **A:** value between 0 and 31

Reference Manual to LL API cross reference:

- CSICFGR CSITRIM LL_RCC_CSI_GetCalibTrimming

LL_RCC_HSI48_Enable

Function name

__STATIC_INLINE void LL_RCC_HSI48_Enable (void)

Function description

Enable HSI48 oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSI48ON LL_RCC_HSI48_Enable

LL_RCC_HSI48_Disable

Function name

__STATIC_INLINE void LL_RCC_HSI48_Disable (void)

Function description

Disable HSI48 oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR HSI48ON LL_RCC_HSI48_Disable

LL_RCC_HSI48_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI48_IsReady (void)

Function description

Check if HSI48 clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR HSI48RDY LL_RCC_HSI48_IsReady

LL_RCC_HSI48_GetCalibration

Function name

__STATIC_INLINE uint32_t LL_RCC_HSI48_GetCalibration (void)

Function description

Get HSI48 Calibration value.

Return values

- **A:** value between 0 and 1023 (0x3FF)

Notes

- When HSI48TRIM is written, HSI48CAL is updated with the sum of HSI48TRIM and the factory trim value

Reference Manual to LL API cross reference:

- CRRCR HSI48CAL LL_RCC_HSI48_GetCalibration

LL_RCC_D1CK_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_D1CK_IsReady (void)

Function description

Check if D1 clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR D1CKRDY LL_RCC_D1CK_IsReady

LL_RCC_D2CK_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_D2CK_IsReady (void)

Function description

Check if D2 clock is ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR D2CKRDY LL_RCC_D2CK_IsReady

LL_RCC_WWDG1_EnableSystemReset

Function name

__STATIC_INLINE void LL_RCC_WWDG1_EnableSystemReset (void)

Function description

Enable system wide reset for Window Watch Dog 1.

Return values

- **None.:**

Reference Manual to LL API cross reference:

- GCR WW1RSC LL_RCC_WWDG1_EnableSystemReset

LL_RCC_WWDG1_IsSystemReset

Function name

__STATIC_INLINE uint32_t LL_RCC_WWDG1_IsSystemReset (void)

Function description

Check if Window Watch Dog 1 reset is system wide.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- GCR WW1RSC LL_RCC_WWDG1_IsSystemReset

LL_RCC_WWDG2_EnableSystemReset

Function name

__STATIC_INLINE void LL_RCC_WWDG2_EnableSystemReset (void)

Function description

Enable system wide reset for Window Watch Dog 2.

Return values

- **None.:**

Reference Manual to LL API cross reference:

- GCR WW1RSC LL_RCC_WWDG2_EnableSystemReset

LL_RCC_WWDG2_IsSystemReset

Function name

__STATIC_INLINE uint32_t LL_RCC_WWDG2_IsSystemReset (void)

Function description

Check if Window Watch Dog 2 reset is system wide.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- GCR WW2RSC LL_RCC_WWDG2_IsSystemReset

LL_RCC_ForceCM4Boot

Function name

__STATIC_INLINE void LL_RCC_ForceCM4Boot (void)

Function description

Force CM4 boot (if hold by option byte BCM4 = 0)

Return values

- **None.:**

Reference Manual to LL API cross reference:

- GCR BOOT_C2 LL_RCC_ForceCM4Boot

LL_RCC_IsCM4BootForced

Function name

__STATIC_INLINE uint32_t LL_RCC_IsCM4BootForced (void)

Function description

Check if CM4 boot is forced.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- GCR BOOT_C2 LL_RCC_IsCM4BootForced

LL_RCC_ForceCM7Boot

Function name

__STATIC_INLINE void LL_RCC_ForceCM7Boot (void)

Function description

Force CM7 boot (if hold by option byte BCM7 = 0)

Return values

- **None.:**

Reference Manual to LL API cross reference:

- GCR BOOT_C1 LL_RCC_ForceCM7Boot

LL_RCC_IsCM7BootForced

Function name

__STATIC_INLINE uint32_t LL_RCC_IsCM7BootForced (void)

Function description

Check if CM7 boot is forced.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- GCR BOOT_C1 LL_RCC_IsCM7BootForced

LL_RCC_LSE_EnableCSS

Function name

__STATIC_INLINE void LL_RCC_LSE_EnableCSS (void)

Function description

Enable the Clock Security System on LSE.

Return values

- **None:**

Notes

- Once LSE Clock Security System is enabled it cannot be changed anymore unless a clock failure is detected.

Reference Manual to LL API cross reference:

- BDCR LSECSSON LL_RCC_LSE_EnableCSS

LL_RCC_LSE_IsFailureDetected

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsFailureDetected (void)

Function description

Check if LSE failure is detected by Clock Security System.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSECSSD LL_RCC_LSE_IsFailureDetected

LL_RCC_LSE_Enable

Function name

__STATIC_INLINE void LL_RCC_LSE_Enable (void)

Function description

Enable Low Speed External (LSE) crystal.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEON LL_RCC_LSE_Enable

LL_RCC_LSE_Disable

Function name

__STATIC_INLINE void LL_RCC_LSE_Disable (void)

Function description

Disable Low Speed External (LSE) crystal.

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEON LL_RCC_LSE_Disable

LL_RCC_LSE_EnableBypass

Function name

__STATIC_INLINE void LL_RCC_LSE_EnableBypass (void)

Function description

Enable external clock source (LSE bypass).

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEBYP LL_RCC_LSE_EnableBypass

LL_RCC_LSE_DisableBypass

Function name

__STATIC_INLINE void LL_RCC_LSE_DisableBypass (void)

Function description

Disable external clock source (LSE bypass).

Return values

- **None:**

Reference Manual to LL API cross reference:

- BDCR LSEBYP LL_RCC_LSE_DisableBypass

LL_RCC_LSE_SetDriveCapability

Function name

__STATIC_INLINE void LL_RCC_LSE_SetDriveCapability (uint32_t LSEDrive)

Function description

Set LSE oscillator drive capability.

Parameters

- **LSEDrive:** This parameter can be one of the following values:
  - LL_RCC_LSEDRIVE_LOW
  - LL_RCC_LSEDRIVE_MEDIUMLOW
  - LL_RCC_LSEDRIVE_MEDIUMHIGH
  - LL_RCC_LSEDRIVE_HIGH

Return values

- **None:**

Notes

- The oscillator is in Xtal mode when it is not in bypass mode.

Reference Manual to LL API cross reference:

- BDCR LSEDRV LL_RCC_LSE_SetDriveCapability

LL_RCC_LSE_GetDriveCapability

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_GetDriveCapability (void)

Function description

Get LSE oscillator drive capability.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_LSEDRIVE_LOW
  - LL_RCC_LSEDRIVE_MEDIUMLOW
  - LL_RCC_LSEDRIVE_MEDIUMHIGH
  - LL_RCC_LSEDRIVE_HIGH

Reference Manual to LL API cross reference:

- BDCR LSEDRV LL_RCC_LSE_GetDriveCapability

LL_RCC_LSE_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_LSE_IsReady (void)

Function description

Check if LSE oscillator Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- BDCR LSERDY LL_RCC_LSE_IsReady

LL_RCC_LSI_Enable

Function name

__STATIC_INLINE void LL_RCC_LSI_Enable (void)

Function description

Enable LSI Oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR LSION LL_RCC_LSI_Enable

LL_RCC_LSI_Disable

Function name

__STATIC_INLINE void LL_RCC_LSI_Disable (void)

Function description

Disable LSI Oscillator.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CSR LSION LL_RCC_LSI_Disable

LL_RCC_LSI_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_LSI_IsReady (void)

Function description

Check if LSI is Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CSR LSIRDY LL_RCC_LSI_IsReady

LL_RCC_SetSysClkSource

Function name

__STATIC_INLINE void LL_RCC_SetSysClkSource (uint32_t Source)

Function description

Configure the system clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_SYS_CLKSOURCE_HSI
  - LL_RCC_SYS_CLKSOURCE_CSI
  - LL_RCC_SYS_CLKSOURCE_HSE
  - LL_RCC_SYS_CLKSOURCE_PLL1

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR SW LL_RCC_SetSysClkSource

LL_RCC_GetSysClkSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSysClkSource (void)

Function description

Get the system clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SYS_CLKSOURCE_STATUS_HSI
  - LL_RCC_SYS_CLKSOURCE_STATUS_CSI
  - LL_RCC_SYS_CLKSOURCE_STATUS_HSE
  - LL_RCC_SYS_CLKSOURCE_STATUS_PLL1

Reference Manual to LL API cross reference:

- CFGR SWS LL_RCC_GetSysClkSource

LL_RCC_SetSysWakeUpClkSource

Function name

__STATIC_INLINE void LL_RCC_SetSysWakeUpClkSource (uint32_t Source)

Function description

Configure the system wakeup clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_SYSWAKEUP_CLKSOURCE_HSI
  - LL_RCC_SYSWAKEUP_CLKSOURCE_CSI

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR STOPWUCK LL_RCC_SetSysWakeUpClkSource

LL_RCC_GetSysWakeUpClkSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSysWakeUpClkSource (void)

Function description

Get the system wakeup clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SYSWAKEUP_CLKSOURCE_HSI
  - LL_RCC_SYSWAKEUP_CLKSOURCE_CSI

Reference Manual to LL API cross reference:

- CFGR STOPWUCK LL_RCC_GetSysWakeUpClkSource

LL_RCC_SetKerWakeUpClkSource

Function name

__STATIC_INLINE void LL_RCC_SetKerWakeUpClkSource (uint32_t Source)

Function description

Configure the kernel wakeup clock source.

Parameters

- **Source:** This parameter can be one of the following values:
  - LL_RCC_KERWAKEUP_CLKSOURCE_HSI
  - LL_RCC_KERWAKEUP_CLKSOURCE_CSI

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR STOPKERWUCK LL_RCC_SetKerWakeUpClkSource

LL_RCC_GetKerWakeUpClkSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetKerWakeUpClkSource (void)

Function description

Get the kernel wakeup clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_KERWAKEUP_CLKSOURCE_HSI
  - LL_RCC_KERWAKEUP_CLKSOURCE_CSI

Reference Manual to LL API cross reference:

- CFGR STOPKERWUCK LL_RCC_GetKerWakeUpClkSource

LL_RCC_SetSysPrescaler

Function name

__STATIC_INLINE void LL_RCC_SetSysPrescaler (uint32_t Prescaler)

Function description

Set System prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_SYSCLK_DIV_1
  - LL_RCC_SYSCLK_DIV_2
  - LL_RCC_SYSCLK_DIV_4
  - LL_RCC_SYSCLK_DIV_8
  - LL_RCC_SYSCLK_DIV_16
  - LL_RCC_SYSCLK_DIV_64
  - LL_RCC_SYSCLK_DIV_128
  - LL_RCC_SYSCLK_DIV_256
  - LL_RCC_SYSCLK_DIV_512

Return values

- **None:**

Reference Manual to LL API cross reference:

- D1CFGR/CDCFGR1 D1CPRE/CDCPRE LL_RCC_SetSysPrescaler

LL_RCC_SetAHBPrescaler

Function name

__STATIC_INLINE void LL_RCC_SetAHBPrescaler (uint32_t Prescaler)

Function description

Set AHB prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_AHB_DIV_1
  - LL_RCC_AHB_DIV_2
  - LL_RCC_AHB_DIV_4
  - LL_RCC_AHB_DIV_8
  - LL_RCC_AHB_DIV_16
  - LL_RCC_AHB_DIV_64
  - LL_RCC_AHB_DIV_128
  - LL_RCC_AHB_DIV_256
  - LL_RCC_AHB_DIV_512

Return values

- **None:**

Reference Manual to LL API cross reference:

- D1CFGR/CDCFGR1 HPRE LL_RCC_SetAHBPrescaler

LL_RCC_SetAPB1Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB1Prescaler (uint32_t Prescaler)

Function description

Set APB1 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_APB1_DIV_1
  - LL_RCC_APB1_DIV_2
  - LL_RCC_APB1_DIV_4
  - LL_RCC_APB1_DIV_8
  - LL_RCC_APB1_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- D2CFGR/CDCFGR2 D2PPRE1/CDPPRE1 LL_RCC_SetAPB1Prescaler

LL_RCC_SetAPB2Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB2Prescaler (uint32_t Prescaler)

Function description

Set APB2 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_APB2_DIV_1
  - LL_RCC_APB2_DIV_2
  - LL_RCC_APB2_DIV_4
  - LL_RCC_APB2_DIV_8
  - LL_RCC_APB2_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- D2CFGR/CDCFGR2 D2PPRE2/CDPPRE2 LL_RCC_SetAPB2Prescaler

LL_RCC_SetAPB3Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB3Prescaler (uint32_t Prescaler)

Function description

Set APB3 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_APB3_DIV_1
  - LL_RCC_APB3_DIV_2
  - LL_RCC_APB3_DIV_4
  - LL_RCC_APB3_DIV_8
  - LL_RCC_APB3_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- D1CFGR/CDCFGR1 D1PPRE/CDPPRE LL_RCC_SetAPB3Prescaler

LL_RCC_SetAPB4Prescaler

Function name

__STATIC_INLINE void LL_RCC_SetAPB4Prescaler (uint32_t Prescaler)

Function description

Set APB4 prescaler.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_APB4_DIV_1
  - LL_RCC_APB4_DIV_2
  - LL_RCC_APB4_DIV_4
  - LL_RCC_APB4_DIV_8
  - LL_RCC_APB4_DIV_16

Return values

- **None:**

Reference Manual to LL API cross reference:

- D3CFGR/SRDCFGR D3PPRE/SRDPPRE LL_RCC_SetAPB4Prescaler

LL_RCC_GetSysPrescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetSysPrescaler (void)

Function description

Get System prescaler.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_SYSCLK_DIV_1
  - LL_RCC_SYSCLK_DIV_2
  - LL_RCC_SYSCLK_DIV_4
  - LL_RCC_SYSCLK_DIV_8
  - LL_RCC_SYSCLK_DIV_16

LL_RCC_GetUSARTClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetUSARTClockSource (uint32_t Periph)

Function description

Get USARTx clock source.

Parameters

- **Periph:** This parameter can be one of the following values:
  - LL_RCC_USART16_CLKSOURCE
  - LL_RCC_USART234578_CLKSOURCE

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_USART16_CLKSOURCE_PCLK2
  - LL_RCC_USART16_CLKSOURCE_PLL2Q
  - LL_RCC_USART16_CLKSOURCE_PLL3Q
  - LL_RCC_USART16_CLKSOURCE_HSI
  - LL_RCC_USART16_CLKSOURCE_CSI
  - LL_RCC_USART16_CLKSOURCE_LSE
  - LL_RCC_USART234578_CLKSOURCE_PCLK1

Reference Manual to LL API cross reference:

- CFGR RTCPRE LL_RCC_GetRTC_HSEPrescaler

LL_RCC_SetTIMPrescaler

Function name

__STATIC_INLINE void LL_RCC_SetTIMPrescaler (uint32_t Prescaler)

Function description

Set Timers Clock Prescalers.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_TIM_PRESCALER_TWICE
  - LL_RCC_TIM_PRESCALER_FOUR_TIMES

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR TIMPRE LL_RCC_SetTIMPrescaler

LL_RCC_GetTIMPrescaler

Function name

__STATIC_INLINE uint32_t LL_RCC_GetTIMPrescaler (void)

Function description

Get Timers Clock Prescalers.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_TIM_PRESCALER_TWICE
  - LL_RCC_TIM_PRESCALER_FOUR_TIMES

Reference Manual to LL API cross reference:

- CFGR TIMPRE LL_RCC_GetTIMPrescaler

LL_RCC_SetHRTIMClockSource

Function name

__STATIC_INLINE void LL_RCC_SetHRTIMClockSource (uint32_t Prescaler)

Function description

Set High Resolution Timers Clock Source.

Parameters

- **Prescaler:** This parameter can be one of the following values:
  - LL_RCC_HRTIM_CLKSOURCE_TIM
  - LL_RCC_HRTIM_CLKSOURCE_CPU

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFGR HRTIMSEL LL_RCC_SetHRTIMClockSource

LL_RCC_GetHRTIMClockSource

Function name

__STATIC_INLINE uint32_t LL_RCC_GetHRTIMClockSource (void)

Function description

Get High Resolution Timers Clock Source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_HRTIM_CLKSOURCE_TIM
  - LL_RCC_HRTIM_CLKSOURCE_CPU

Reference Manual to LL API cross reference:

- CFGR HRTIMSEL LL_RCC_GetHRTIMClockSource

LL_RCC_PLL_SetSource

Function name

__STATIC_INLINE void LL_RCC_PLL_SetSource (uint32_t PLLSource)

Function description

Set the oscillator used as PLL clock source.

Parameters

- **PLLSource:** parameter can be one of the following values:
  - LL_RCC_PLLSOURCE_HSI
  - LL_RCC_PLLSOURCE_CSI
  - LL_RCC_PLLSOURCE_HSE
  - LL_RCC_PLLSOURCE_NONE

Return values

- **None:**

Notes

- PLLSRC can be written only when All PLLs are disabled.

Reference Manual to LL API cross reference:

- PLLCKSELR PLLSRC LL_RCC_PLL_SetSource

LL_RCC_PLL_GetSource

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL_GetSource (void)

Function description

Get the oscillator used as PLL clock source.

Return values

- **Returned:** value can be one of the following values:
  - LL_RCC_PLLSOURCE_HSI
  - LL_RCC_PLLSOURCE_CSI
  - LL_RCC_PLLSOURCE_HSE
  - LL_RCC_PLLSOURCE_NONE

Reference Manual to LL API cross reference:

- PLLCKSELR PLLSRC LL_RCC_PLL_GetSource

LL_RCC_PLL1_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL1_Enable (void)

Function description

Enable PLL1.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PLL1ON LL_RCC_PLL1_Enable

LL_RCC_PLL1_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL1_Disable (void)

Function description

Disable PLL1.

Return values

- **None:**

Notes

- Cannot be disabled if the PLL1 clock is used as the system clock

Reference Manual to LL API cross reference:

- CR PLL1ON LL_RCC_PLL1_Disable

LL_RCC_PLL1_IsReady

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_IsReady (void)

Function description

Check if PLL1 Ready.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR PLL1RDY LL_RCC_PLL1_IsReady

LL_RCC_PLL1P_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL1P_Enable (void)

Function description

Enable PLL1P.

Return values

- **None:**

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVP1EN LL_RCC_PLL1P_Enable

LL_RCC_PLL1Q_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL1Q_Enable (void)

Function description

Enable PLL1Q.

Return values

- **None:**

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVQ1EN LL_RCC_PLL1Q_Enable

LL_RCC_PLL1R_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL1R_Enable (void)

Function description

Enable PLL1R.

Return values

- **None:**

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVR1EN LL_RCC_PLL1R_Enable

LL_RCC_PLL1FRACN_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL1FRACN_Enable (void)

Function description

Enable PLL1 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLLCFGR PLL1FRACEN LL_RCC_PLL1FRACN_Enable

LL_RCC_PLL1P_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1P_IsEnabled (void)

Function description

Check if PLL1 P is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLLCFGR DIVP1EN LL_RCC_PLL1P_IsEnabled

LL_RCC_PLL1Q_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1Q_IsEnabled (void)

Function description

Check if PLL1 Q is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLLCFGR DIVQ1EN LL_RCC_PLL1Q_IsEnabled

LL_RCC_PLL1R_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1R_IsEnabled (void)

Function description

Check if PLL1 R is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLLCFGR DIVR1EN LL_RCC_PLL1R_IsEnabled

LL_RCC_PLL1FRACN_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1FRACN_IsEnabled (void)

Function description

Check if PLL1 FRACN is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLLCFGR PLL1FRACEN LL_RCC_PLL1FRACN_IsEnabled

LL_RCC_PLL1P_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL1P_Disable (void)

Function description

Disable PLL1P.

Return values

- **None:**

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVP1EN LL_RCC_PLL1P_Disable

LL_RCC_PLL1Q_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL1Q_Disable (void)

Function description

Disable PLL1Q.

Return values

- **None:**

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVQ1EN LL_RCC_PLL1Q_Disable

LL_RCC_PLL1R_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL1R_Disable (void)

Function description

Disable PLL1R.

Return values

- **None:**

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVR1EN LL_RCC_PLL1R_Disable

LL_RCC_PLL1FRACN_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL1FRACN_Disable (void)

Function description

Disable PLL1 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLLCFGR PLL1FRACEN LL_RCC_PLL1FRACN_Enable

LL_RCC_PLL1_SetVCOOutputRange

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetVCOOutputRange (uint32_t VCORange)

Function description

Set PLL1 VCO OutputRange.

Parameters

- **VCORange:** This parameter can be one of the following values:
  - LL_RCC_PLLVCORANGE_WIDE
  - LL_RCC_PLLVCORANGE_MEDIUM

Return values

- **None:**

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR PLL1VCOSEL LL_RCC_PLL1_SetVCOOuputRange

LL_RCC_PLL1_SetVCOInputRange

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetVCOInputRange (uint32_t InputRange)

Function description

Set PLL1 VCO Input Range.

Parameters

- **InputRange:** This parameter can be one of the following values:
  - LL_RCC_PLLINPUTRANGE_1_2
  - LL_RCC_PLLINPUTRANGE_2_4
  - LL_RCC_PLLINPUTRANGE_4_8
  - LL_RCC_PLLINPUTRANGE_8_16

Return values

- **None:**

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR PLL1RGE LL_RCC_PLL1_SetVCOInputRange

LL_RCC_PLL1_GetN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetN (void)

Function description

Get PLL1 N Coefficient.

Return values

- **A:** value between 4 and 512

Reference Manual to LL API cross reference:

- PLL1DIVR N1 LL_RCC_PLL1_GetN

LL_RCC_PLL1_GetM

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetM (void)

Function description

Get PLL1 M Coefficient.

Return values

- **A:** value between 0 and 63

Reference Manual to LL API cross reference:

- PLLCKSELR DIVM1 LL_RCC_PLL1_GetM

LL_RCC_PLL1_GetP

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetP (void)

Function description

Get PLL1 P Coefficient.

Return values

- **A:** value between 2 and 128

Reference Manual to LL API cross reference:

- PLL1DIVR P1 LL_RCC_PLL1_GetP

LL_RCC_PLL1_GetQ

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetQ (void)

Function description

Get PLL1 Q Coefficient.

Return values

- **A:** value between 1 and 128

Reference Manual to LL API cross reference:

- PLL1DIVR Q1 LL_RCC_PLL1_GetQ

LL_RCC_PLL1_GetR

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetR (void)

Function description

Get PLL1 R Coefficient.

Return values

- **A:** value between 1 and 128

Reference Manual to LL API cross reference:

- PLL1DIVR R1 LL_RCC_PLL1_GetR

LL_RCC_PLL1_GetFRACN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL1_GetFRACN (void)

Function description

Get PLL1 FRACN Coefficient.

Return values

- **A:** value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL1FRACR FRACN1 LL_RCC_PLL1_GetFRACN

LL_RCC_PLL1_SetN

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetN (uint32_t N)

Function description

Set PLL1 N Coefficient.

Parameters

- **N:** parameter can be a value between 4 and 512

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLL1DIVR N1 LL_RCC_PLL1_SetN

LL_RCC_PLL1_SetM

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetM (uint32_t M)

Function description

Set PLL1 M Coefficient.

Parameters

- **M:** parameter can be a value between 0 and 63

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLLCKSELR DIVM1 LL_RCC_PLL1_SetM

LL_RCC_PLL1_SetP

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetP (uint32_t P)

Function description

Set PLL1 P Coefficient.

Parameters

- **P:** parameter can be a value between 2 (or 1*) and 128 (ODD division factor not supported)

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLL1DIVR P1 LL_RCC_PLL1_SetP

LL_RCC_PLL1_SetQ

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetQ (uint32_t Q)

Function description

Set PLL1 Q Coefficient.

Parameters

- **Q:** parameter can be a value between 1 and 128

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLL1DIVR Q1 LL_RCC_PLL1_SetQ

LL_RCC_PLL1_SetR

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetR (uint32_t R)

Function description

Set PLL1 R Coefficient.

Parameters

- **R:** parameter can be a value between 1 and 128

Notes

- This API shall be called only when PLL1 is disabled.

Reference Manual to LL API cross reference:

- PLL1DIVR R1 LL_RCC_PLL1_SetR

LL_RCC_PLL1_SetFRACN

Function name

__STATIC_INLINE void LL_RCC_PLL1_SetFRACN (uint32_t FRACN)

Function description

Set PLL1 FRACN Coefficient.

Parameters

- **FRACN:** parameter can be a value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL1FRACR FRACN1 LL_RCC_PLL1_SetFRACN

LL_RCC_PLL2_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL2_Enable (void)

Function description

Enable PLL2.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR PLL2ON LL_RCC_PLL2_Enable

LL_RCC_PLL2_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL2_Disable (void)

Function description

Function description

Enable PLL3R.

Return values

- **None:**

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVR3EN LL_RCC_PLL3R_Enable

LL_RCC_PLL3FRACN_Enable

Function name

__STATIC_INLINE void LL_RCC_PLL3FRACN_Enable (void)

Function description

Enable PLL3 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLLCFGR PLL3FRACEN LL_RCC_PLL3FRACN_Enable

LL_RCC_PLL3P_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3P_IsEnabled (void)

Function description

Check if PLL3 P is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLLCFGR DIVP3EN LL_RCC_PLL3P_IsEnabled

LL_RCC_PLL3Q_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3Q_IsEnabled (void)

Function description

Check if PLL3 Q is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLLCFGR DIVQ3EN LL_RCC_PLL3Q_IsEnabled

LL_RCC_PLL3R_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3R_IsEnabled (void)

Function description

Check if PLL3 R is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLLCFGR DIVR3EN LL_RCC_PLL3R_IsEnabled

LL_RCC_PLL3FRACN_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3FRACN_IsEnabled (void)

Function description

Check if PLL3 FRACN is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- PLLCFGR PLL3FRACEN LL_RCC_PLL3FRACN_IsEnabled

LL_RCC_PLL3P_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL3P_Disable (void)

Function description

Disable PLL3P.

Return values

- **None:**

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVP2EN LL_RCC_PLL3P_Disable

LL_RCC_PLL3Q_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL3Q_Disable (void)

Function description

Disable PLL3Q.

Return values

- **None:**

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVQ3EN LL_RCC_PLL3Q_Disable

LL_RCC_PLL3R_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL3R_Disable (void)

Function description

Disable PLL3R.

Return values

- **None:**

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR DIVR3EN LL_RCC_PLL3R_Disable

LL_RCC_PLL3FRACN_Disable

Function name

__STATIC_INLINE void LL_RCC_PLL3FRACN_Disable (void)

Function description

Disable PLL3 FRACN.

Return values

- **None:**

Reference Manual to LL API cross reference:

- PLLCFGR PLL3FRACEN LL_RCC_PLL3FRACN_Enable

LL_RCC_PLL3_SetVCOOutputRange

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetVCOOutputRange (uint32_t VCORange)

Function description

Set PLL3 VCO OutputRange.

Parameters

- **VCORange:** This parameter can be one of the following values:
  - LL_RCC_PLLVCORANGE_WIDE
  - LL_RCC_PLLVCORANGE_MEDIUM

Return values

- **None:**

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR PLL3VCOSEL LL_RCC_PLL3_SetVCOOuputRange

LL_RCC_PLL3_SetVCOInputRange

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetVCOInputRange (uint32_t InputRange)

Function description

Set PLL3 VCO Input Range.

Parameters

- **InputRange:** This parameter can be one of the following values:
  - LL_RCC_PLLINPUTRANGE_1_2
  - LL_RCC_PLLINPUTRANGE_2_4
  - LL_RCC_PLLINPUTRANGE_4_8
  - LL_RCC_PLLINPUTRANGE_8_16

Return values

- **None:**

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLLCFGR PLL3RGE LL_RCC_PLL3_SetVCOInputRange

LL_RCC_PLL3_GetN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetN (void)

Function description

Get PLL3 N Coefficient.

Return values

- **A:** value between 4 and 512

Reference Manual to LL API cross reference:

- PLL3DIVR N3 LL_RCC_PLL3_GetN

LL_RCC_PLL3_GetM

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetM (void)

Function description

Get PLL3 M Coefficient.

Return values

- **A:** value between 0 and 63

Reference Manual to LL API cross reference:

- PLLCKSELR DIVM3 LL_RCC_PLL3_GetM

LL_RCC_PLL3_GetP

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetP (void)

Function description

Get PLL3 P Coefficient.

Return values

- **A:** value between 1 and 128

Reference Manual to LL API cross reference:

- PLL3DIVR P3 LL_RCC_PLL3_GetP

LL_RCC_PLL3_GetQ

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetQ (void)

Function description

Get PLL3 Q Coefficient.

Return values

- **A:** value between 1 and 128

Reference Manual to LL API cross reference:

- PLL3DIVR Q3 LL_RCC_PLL3_GetQ

LL_RCC_PLL3_GetR

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetR (void)

Function description

Get PLL3 R Coefficient.

Return values

- **A:** value between 1 and 128

Reference Manual to LL API cross reference:

- PLL3DIVR R3 LL_RCC_PLL3_GetR

LL_RCC_PLL3_GetFRACN

Function name

__STATIC_INLINE uint32_t LL_RCC_PLL3_GetFRACN (void)

Function description

Get PLL3 FRACN Coefficient.

Return values

- **A:** value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL3FRACR FRACN3 LL_RCC_PLL3_GetFRACN

LL_RCC_PLL3_SetN

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetN (uint32_t N)

Function description

Set PLL3 N Coefficient.

Parameters

- **N:** parameter can be a value between 4 and 512

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLL3DIVR N3 LL_RCC_PLL3_SetN

LL_RCC_PLL3_SetM

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetM (uint32_t M)

Function description

Set PLL3 M Coefficient.

Parameters

- **M:** parameter can be a value between 0 and 63

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLLCKSELR DIVM3 LL_RCC_PLL3_SetM

LL_RCC_PLL3_SetP

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetP (uint32_t P)

Function description

Set PLL3 P Coefficient.

Parameters

- **P:** parameter can be a value between 1 and 128

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLL3DIVR P3 LL_RCC_PLL3_SetP

LL_RCC_PLL3_SetQ

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetQ (uint32_t Q)

Function description

Set PLL3 Q Coefficient.

Parameters

- **Q:** parameter can be a value between 1 and 128

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLL3DIVR Q3 LL_RCC_PLL3_SetQ

LL_RCC_PLL3_SetR

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetR (uint32_t R)

Function description

Set PLL3 R Coefficient.

Parameters

- **R:** parameter can be a value between 1 and 128

Notes

- This API shall be called only when PLL3 is disabled.

Reference Manual to LL API cross reference:

- PLL3DIVR R3 LL_RCC_PLL3_SetR

LL_RCC_PLL3_SetFRACN

Function name

__STATIC_INLINE void LL_RCC_PLL3_SetFRACN (uint32_t FRACN)

Function description

Set PLL3 FRACN Coefficient.

Parameters

- **FRACN:** parameter can be a value between 0 and 8191 (0x1FFF)

Reference Manual to LL API cross reference:

- PLL3FRACR FRACN3 LL_RCC_PLL3_SetFRACN

LL_RCC_ClearFlag_LSIRDY

Function name

__STATIC_INLINE void LL_RCC_ClearFlag_LSIRDY (void)

Function description

Clear LSI ready interrupt flag.

Return values

- **None:**

Reference Manual to LL API cross reference:

- CICR LSIRDYC LL_RCC_ClearFlag_LSIRDY

LL_RCC_ClearFlag_LSERDY

Function name

Function description

Checks if PLL3 ready interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CIER PLL3RDYIE LL_RCC_IsEnableIT_PLL3RDY

LL_RCC_IsEnableIT_LSECSS

Function name

__STATIC_INLINE uint32_t LL_RCC_IsEnableIT_LSECSS (void)

Function description

Checks if LSECSS interrupt source is enabled or disabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CIER LSECSSIE LL_RCC_IsEnableIT_LSECSS

LL_RCC_DeInit

Function name

void LL_RCC_DeInit (void)

Function description

Resets the RCC clock configuration to the default reset state.

Return values

- **None:**

Notes

- The default reset state of the clock configuration is given below: HSI ON and used as system clock sourceHSE, PLL1, PLL2 and PLL3 OFFAHB, APB Bus pre-scaler set to 1.CSS, MCO1 and MCO2 OFFAll interrupts disabled
- This function doesn't modify the configuration of the Peripheral clocksLSI, LSE and RTC clocks

LL_RCC_CalcPLLClockFreq

Function name

uint32_t LL_RCC_CalcPLLClockFreq (uint32_t PLLInputFreq, uint32_t M, uint32_t N, uint32_t FRACN, uint32_t PQR)

Function description

Helper function to calculate the PLL frequency output.

Parameters

- **PLLInputFreq:** PLL Input frequency (based on HSE/(HSI/HSIDIV)/CSI)
- **M:** Between 1 and 63
- **N:** Between 4 and 512
- **FRACN:** Between 0 and 0x1FFF
- **PQR:** VCO output divider (P, Q or R) Between 1 and 128, except for PLL1P Odd value not allowed

Return values

- **PLL1:** clock frequency (in Hz)

Notes

- ex: LL_RCC_CalcPLLClockFreq (HSE_VALUE, LL_RCC_PLL1_GetM (), LL_RCC_PLL1_GetN (), LL_RCC_PLL1_GetFRACN (), LL_RCC_PLL1_GetP ());

LL_RCC_GetPLL1ClockFreq

Function name

void LL_RCC_GetPLL1ClockFreq (LL_PLL_ClocksTypeDef * PLL_Clocks)

Function description

Return PLL1 clocks frequencies.

Return values

- **None:**

Notes

- LL_RCC_PERIPH_FREQUENCY_NO returned for non activated output or oscillator not ready

LL_RCC_GetPLL2ClockFreq

Function name

void LL_RCC_GetPLL2ClockFreq (LL_PLL_ClocksTypeDef * PLL_Clocks)

Function description

Return PLL2 clocks frequencies.

Return values

- **None:**

Notes

- LL_RCC_PERIPH_FREQUENCY_NO returned for non activated output or oscillator not ready

LL_RCC_GetPLL3ClockFreq

Function name

void LL_RCC_GetPLL3ClockFreq (LL_PLL_ClocksTypeDef * PLL_Clocks)

Function description

Return PLL3 clocks frequencies.

Return values

- **None:**

Notes

- LL_RCC_PERIPH_FREQUENCY_NO returned for non activated output or oscillator not ready

LL_RCC_GetSystemClocksFreq

Function name

void LL_RCC_GetSystemClocksFreq (LL_RCC_ClocksTypeDef * RCC_Clocks)

Function description

Return the frequencies of different on chip clocks; System, AHB, APB1, APB2, APB3 and APB4 buses clocks.

Parameters

- **RCC_Clocks:** pointer to a LL_RCC_ClocksTypeDef structure which will hold the clocks frequencies

Return values

- **None:**

Notes

- Each time SYSCLK, HCLK, PCLK1, PCLK2, PCLK3 and/or PCLK4 clock changes, this function must be called to update structure fields. Otherwise, any configuration based on this function will be incorrect.

LL_RCC_GetUSARTClockFreq

Function name

uint32_t LL_RCC_GetUSARTClockFreq (uint32_t USARTxSource)

Function description

Return USARTx clock frequency.

Parameters

- **USARTxSource:** This parameter can be one of the following values:
  - LL_RCC_USART16_CLKSOURCE
  - LL_RCC_USART234578_CLKSOURCE

Return values

- **USART:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetLPUARTClockFreq

Function name

uint32_t LL_RCC_GetLPUARTClockFreq (uint32_t LPUARTxSource)

Function description

Return LPUART clock frequency.

Parameters

- **LPUARTxSource:** This parameter can be one of the following values:
  - LL_RCC_LPUART1_CLKSOURCE

Return values

- **LPUART:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetI2CClockFreq

Function name

uint32_t LL_RCC_GetI2CClockFreq (uint32_t I2CxSource)

Function description

Return I2Cx clock frequency.

Parameters

- **I2CxSource:** This parameter can be one of the following values:
  - LL_RCC_I2C123_CLKSOURCE
  - LL_RCC_I2C4_CLKSOURCE

Return values

- **I2C:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetLPTIMClockFreq

Function name

uint32_t LL_RCC_GetLPTIMClockFreq (uint32_t LPTIMxSource)

Function description

Return LPTIMx clock frequency.

Parameters

- **LPTIMxSource:** This parameter can be one of the following values:
  - LL_RCC_LPTIM1_CLKSOURCE
  - LL_RCC_LPTIM2_CLKSOURCE
  - LL_RCC_LPTIM345_CLKSOURCE

Return values

- **LPTIM:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetSAIClockFreq

Function name

uint32_t LL_RCC_GetSAIClockFreq (uint32_t SAIxSource)

Function description

Return SAIx clock frequency.

Parameters

- **SAIxSource:** This parameter can be one of the following values:
  - LL_RCC_SAI1_CLKSOURCE
  - LL_RCC_SAI23_CLKSOURCE (*)
  - LL_RCC_SAI2A_CLKSOURCE (*)
  - LL_RCC_SAI2B_CLKSOURCE (*)
  - LL_RCC_SAI4A_CLKSOURCE (*)
  - LL_RCC_SAI4B_CLKSOURCE (*)

Return values

- **SAI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetADCClockFreq

Function name

uint32_t LL_RCC_GetADCClockFreq (uint32_t ADCxSource)

Function description

Return ADC clock frequency.

Parameters

- **ADCxSource:** This parameter can be one of the following values:
  - LL_RCC_ADC_CLKSOURCE

Return values

- **ADC:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetSDMMCClockFreq

Function name

uint32_t LL_RCC_GetSDMMCClockFreq (uint32_t SDMMCxSource)

Function description

Return SDMMC clock frequency.

Parameters

- **SDMMCxSource:** This parameter can be one of the following values:
  - LL_RCC_SDMMC_CLKSOURCE

Return values

- **SDMMC:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetRNGClockFreq

Function name

uint32_t LL_RCC_GetRNGClockFreq (uint32_t RNGxSource)

Function description

Return RNG clock frequency.

Parameters

- **RNGxSource:** This parameter can be one of the following values:
  - LL_RCC_RNG_CLKSOURCE

Return values

- **RNG:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetCECClockFreq

Function name

uint32_t LL_RCC_GetCECClockFreq (uint32_t CECxSource)

Function description

Return CEC clock frequency.

Parameters

- **CECxSource:** This parameter can be one of the following values:
  - LL_RCC_RNG_CLKSOURCE

Return values

- **CEC:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetUSBClockFreq

Function name

uint32_t LL_RCC_GetUSBClockFreq (uint32_t USBxSource)

Function description

Return USB clock frequency.

Parameters

- **USBxSource:** This parameter can be one of the following values:
  - LL_RCC_USB_CLKSOURCE

Return values

- **USB:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready or Disabled

LL_RCC_GetDFSDMClockFreq

Function name

uint32_t LL_RCC_GetDFSDMClockFreq (uint32_t DFSDMxSource)

Function description

Return DFSDM clock frequency.

Parameters

- **DFSDMxSource:** This parameter can be one of the following values:
  - LL_RCC_DFSDM1_CLKSOURCE

Return values

- **DFSDM:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetSPDIFClockFreq

Function name

uint32_t LL_RCC_GetSPDIFClockFreq (uint32_t SPDIFxSource)

Function description

Return SPDIF clock frequency.

Parameters

- **SPDIFxSource:** This parameter can be one of the following values:
  - LL_RCC_SPDIF_CLKSOURCE

Return values

- **SPDIF:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetSPIClockFreq

Function name

uint32_t LL_RCC_GetSPIClockFreq (uint32_t SPIxSource)

Function description

Return SPIx clock frequency.

Parameters

- **SPIxSource:** This parameter can be one of the following values:
  - LL_RCC_SPI123_CLKSOURCE
  - LL_RCC_SPI45_CLKSOURCE
  - LL_RCC_SPI6_CLKSOURCE

Return values

- **SPI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetSWPClockFreq

Function name

uint32_t LL_RCC_GetSWPClockFreq (uint32_t SWPxSource)

Function description

Return SWP clock frequency.

Parameters

- **SWPxSource:** This parameter can be one of the following values:
  - LL_RCC_SWP_CLKSOURCE

Return values

- **SWP:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetFDCANClockFreq

Function name

uint32_t LL_RCC_GetFDCANClockFreq (uint32_t FDCANxSource)

Function description

Return FDCAN clock frequency.

Parameters

- **FDCANxSource:** This parameter can be one of the following values:
  - LL_RCC_FDCAN_CLKSOURCE

Return values

- **FDCAN:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetFMCClockFreq

Function name

uint32_t LL_RCC_GetFMCClockFreq (uint32_t FMCxSource)

Function description

Return FMC clock frequency.

Parameters

- **FMCxSource:** This parameter can be one of the following values:
  - LL_RCC_FMC_CLKSOURCE

Return values

- **FMC:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetQSPIClockFreq

Function name

uint32_t LL_RCC_GetQSPIClockFreq (uint32_t QSPIxSource)

Function description

Return QSPI clock frequency.

Parameters

- **QSPIxSource:** This parameter can be one of the following values:
  - LL_RCC_QSPI_CLKSOURCE

Return values

- **QSPI:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

LL_RCC_GetCLKPClockFreq

Function name

uint32_t LL_RCC_GetCLKPClockFreq (uint32_t CLKPxSource)

Function description

Return CLKP clock frequency.

Parameters

- **CLKPxSource:** This parameter can be one of the following values:
  - LL_RCC_CLKP_CLKSOURCE

Return values

- **CLKP:** clock frequency (in Hz)
  - LL_RCC_PERIPH_FREQUENCY_NO indicates that oscillator is not ready

120.3 RCC Firmware driver defines

The following section lists the various define and macros of the module.

120.3.1 RCC

RCC

Peripheral ADC get clock source

LL_RCC_ADC_CLKSOURCE

Peripheral ADC clock source selection

LL_RCC_ADC_CLKSOURCE_PLL2P

LL_RCC_ADC_CLKSOURCE_PLL3R

LL_RCC_ADC_CLKSOURCE_CLKP

AHB prescaler

LL_RCC_AHB_DIV_1

LL_RCC_AHB_DIV_2

LL_RCC_AHB_DIV_4

LL_RCC_AHB_DIV_8

LL_RCC_AHB_DIV_16

LL_RCC_AHB_DIV_64

LL_RCC_AHB_DIV_128

LL_RCC_AHB_DIV_256

LL_RCC_AHB_DIV_512

APB low-speed prescaler (APB1)

LL_RCC_APB1_DIV_1

LL_RCC_APB1_DIV_2

LL_RCC_APB1_DIV_4

LL_RCC_APB1_DIV_8

LL_RCC_APB1_DIV_16

APB low-speed prescaler (APB2)

LL_RCC_APB2_DIV_1

LL_RCC_APB2_DIV_2

LL_RCC_APB2_DIV_4

LL_RCC_APB2_DIV_8

LL_RCC_APB2_DIV_16

APB low-speed prescaler (APB3)

LL_RCC_APB3_DIV_1

LL_RCC_APB3_DIV_2

LL_RCC_APB3_DIV_4

LL_RCC_APB3_DIV_8

LL_RCC_APB3_DIV_16

APB low-speed prescaler (APB4)

LL_RCC_APB4_DIV_1

LL_RCC_APB4_DIV_2

LL_RCC_APB4_DIV_4

LL_RCC_APB4_DIV_8

LL_RCC_APB4_DIV_16

Peripheral CEC get clock source

LL_RCC_CEC_CLKSOURCE

Peripheral CEC clock source selection

LL_RCC_CEC_CLKSOURCE_LSE

LL_RCC_CEC_CLKSOURCE_LSI

LL_RCC_CEC_CLKSOURCE_CSI_DIV122

Peripheral CLKP get clock source

LL_RCC_CLKP_CLKSOURCE

Peripheral CLKP clock source selection

LL_RCC_CLKP_CLKSOURCE_HSI

LL_RCC_CLKP_CLKSOURCE_CSI

LL_RCC_CLKP_CLKSOURCE_HSE

Peripheral DFSDM get clock source

LL_RCC_DFSDM1_CLKSOURCE

Peripheral DFSDM clock source selection

LL_RCC_DFSDM1_CLKSOURCE_PCLK2

LL_RCC_DFSDM1_CLKSOURCE_SYSCLK

Peripheral FDCAN get clock source

LL_RCC_FDCAN_CLKSOURCE

Peripheral FDCAN clock source selection

LL_RCC_FDCAN_CLKSOURCE_HSE

LL_RCC_FDCAN_CLKSOURCE_PLL1Q

LL_RCC_FDCAN_CLKSOURCE_PLL2Q

Peripheral FMC get clock source

LL_RCC_FMC_CLKSOURCE

Peripheral FMC clock source selection

LL_RCC_FMC_CLKSOURCE_HCLK

LL_RCC_FMC_CLKSOURCE_PLL1Q

LL_RCC_FMC_CLKSOURCE_PLL2R

LL_RCC_FMC_CLKSOURCE_CLKP

High Resolution Timers clock selection

LL_RCC_HRTIM_CLKSOURCE_TIM

LL_RCC_HRTIM_CLKSOURCE_CPU

HSI oscillator divider

LL_RCC_HSI_DIV1

LL_RCC_HSI_DIV2

LL_RCC_HSI_DIV4

LL_RCC_HSI_DIV8

Peripheral I2C get clock source

LL_RCC_I2C123_CLKSOURCE

LL_RCC_I2C1235_CLKSOURCE

LL_RCC_I2C4_CLKSOURCE

Peripheral I2C clock source selection

Calculate frequencies

LL_RCC_CALC_SYSCLK_FREQ

Description:

- Helper macro to calculate the SYSCLK frequency.

Parameters:

- __SYSINPUTCLKFREQ__: Frequency of the input of sys_ck (based on HSE/CSI/HSI/PLL1P)
- __SYSPRESCALER__: This parameter can be one of the following values:
  - LL_RCC_SYSCLK_DIV_1
  - LL_RCC_SYSCLK_DIV_2
  - LL_RCC_SYSCLK_DIV_4
  - LL_RCC_SYSCLK_DIV_8
  - LL_RCC_SYSCLK_DIV_16
  - LL_RCC_SYSCLK_DIV_64
  - LL_RCC_SYSCLK_DIV_128
  - LL_RCC_SYSCLK_DIV_256
  - LL_RCC_SYSCLK_DIV_512

Return value:

- SYSCLK: clock frequency (in Hz)

LL_RCC_CALC_HCLK_FREQ

Description:

- Helper macro to calculate the HCLK frequency.

Parameters:

- __SYSCLKFREQ__: SYSCLK frequency.
- __HPRESCALER__: This parameter can be one of the following values:
  - LL_RCC_AHB_DIV_1
  - LL_RCC_AHB_DIV_2
  - LL_RCC_AHB_DIV_4
  - LL_RCC_AHB_DIV_8
  - LL_RCC_AHB_DIV_16
  - LL_RCC_AHB_DIV_64
  - LL_RCC_AHB_DIV_128
  - LL_RCC_AHB_DIV_256
  - LL_RCC_AHB_DIV_512

Return value:

- HCLK: clock frequency (in Hz)

LL_RCC_CALC_PCLK1_FREQ

Description:

- Helper macro to calculate the PCLK1 frequency (ABP1)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB1PRESCALER__: This parameter can be one of the following values:
  - LL_RCC_APB1_DIV_1
  - LL_RCC_APB1_DIV_2
  - LL_RCC_APB1_DIV_4
  - LL_RCC_APB1_DIV_8
  - LL_RCC_APB1_DIV_16

Return value:

- PCLK1: clock frequency (in Hz)

LL_RCC_CALC_PCLK2_FREQ

Description:

- Helper macro to calculate the PCLK2 frequency (ABP2)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB2PRESCALER__: This parameter can be one of the following values:
  - LL_RCC_APB2_DIV_1
  - LL_RCC_APB2_DIV_2
  - LL_RCC_APB2_DIV_4
  - LL_RCC_APB2_DIV_8
  - LL_RCC_APB2_DIV_16

Return value:

- PCLK2: clock frequency (in Hz)

LL_RCC_CALC_PCLK3_FREQ

Description:

- Helper macro to calculate the PCLK3 frequency (APB3)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB3PRESCALER__: This parameter can be one of the following values:
  - LL_RCC_APB3_DIV_1
  - LL_RCC_APB3_DIV_2
  - LL_RCC_APB3_DIV_4
  - LL_RCC_APB3_DIV_8
  - LL_RCC_APB3_DIV_16

Return value:

- PCLK1: clock frequency (in Hz)

LL_RCC_CALC_PCLK4_FREQ

Description:

- Helper macro to calculate the PCLK4 frequency (ABP4)

Parameters:

- __HCLKFREQ__: HCLK frequency
- __APB4PRESCALER__: This parameter can be one of the following values:
  - LL_RCC_APB4_DIV_1
  - LL_RCC_APB4_DIV_2
  - LL_RCC_APB4_DIV_4
  - LL_RCC_APB4_DIV_8
  - LL_RCC_APB4_DIV_16

Return value:

- PCLK1: clock frequency (in Hz)

Common Write and read registers Macros

LL_RCC_WriteReg

Description:

- Write a value in RCC register.

Parameters:

- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_RCC_ReadReg

Description:

- Read a value in RCC register.

Parameters:

- __REG__: Register to be read

Return value:

- Register: value

121 LL RNG Generic Driver

121.1 RNG Firmware driver registers structures

121.1.1 LL_RNG_InitTypeDef

LL_RNG_InitTypeDef is defined in the stm32h7xx_ll_rng.h

Data Fields

- ***uint32_t ClockErrorDetection***

Field Documentation

- ***uint32_t LL_RNG_InitTypeDef::ClockErrorDetection***
  Clock error detection. This parameter can be one value of ***RNG_LL_CED***. This parameter can be modified using unitary functions **LL_RNG_EnableClkErrorDetect()**.

121.2 RNG Firmware driver API description

The following section lists the various functions of the RNG library.

121.2.1 Detailed description of functions

LL_RNG_Enable

Function name

__STATIC_INLINE void LL_RNG_Enable (RNG_TypeDef * RNGx)

Function description

Enable Random Number Generation.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNGEN LL_RNG_Enable

LL_RNG_Disable

Function name

__STATIC_INLINE void LL_RNG_Disable (RNG_TypeDef * RNGx)

Function description

Disable Random Number Generation.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RNGEN LL_RNG_Disable

LL_RNG_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabled (RNG_TypeDef * RNGx)

Function description

Check if Random Number Generator is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RNGEN LL_RNG_IsEnabled

LL_RNG_EnableClkErrorDetect

Function name

__STATIC_INLINE void LL_RNG_EnableClkErrorDetect (RNG_TypeDef * RNGx)

Function description

Enable Clock Error Detection.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CED LL_RNG_EnableClkErrorDetect

LL_RNG_DisableClkErrorDetect

Function name

__STATIC_INLINE void LL_RNG_DisableClkErrorDetect (RNG_TypeDef * RNGx)

Function description

Disable RNG Clock Error Detection.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR CED LL_RNG_DisableClkErrorDetect

LL_RNG_IsEnabledClkErrorDetect

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledClkErrorDetect (RNG_TypeDef * RNGx)

Function description

Check if RNG Clock Error Detection is enabled.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR CED LL_RNG_IsEnabledClkErrorDetect

LL_RNG_IsActiveFlag_DRDY

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_DRDY (RNG_TypeDef * RNGx)

Function description

Indicate if the RNG Data ready Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR DRDY LL_RNG_IsActiveFlag_DRDY

LL_RNG_IsActiveFlag_CECS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_CECS (RNG_TypeDef * RNGx)

Function description

Indicate if the Clock Error Current Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CECS LL_RNG_IsActiveFlag_CECS

LL_RNG_IsActiveFlag_SECS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_SECS (RNG_TypeDef * RNGx)

Function description

Indicate if the Seed Error Current Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SECS LL_RNG_IsActiveFlag_SECS

LL_RNG_IsActiveFlag_CEIS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_CEIS (RNG_TypeDef * RNGx)

Function description

Indicate if the Clock Error Interrupt Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CEIS LL_RNG_IsActiveFlag_CEIS

LL_RNG_IsActiveFlag_SEIS

Function name

__STATIC_INLINE uint32_t LL_RNG_IsActiveFlag_SEIS (RNG_TypeDef * RNGx)

Function description

Indicate if the Seed Error Interrupt Status Flag is set or not.

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SEIS LL_RNG_IsActiveFlag_SEIS

LL_RNG_ClearFlag_CEIS

Function name

__STATIC_INLINE void LL_RNG_ClearFlag_CEIS (RNG_TypeDef * RNGx)

Function description

Clear Clock Error interrupt Status (CEIS) Flag.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CEIS LL_RNG_ClearFlag_CEIS

LL_RNG_ClearFlag_SEIS

Function name

__STATIC_INLINE void LL_RNG_ClearFlag_SEIS (RNG_TypeDef * RNGx)

Function description

Clear Seed Error interrupt Status (SEIS) Flag.

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR SEIS LL_RNG_ClearFlag_SEIS

LL_RNG_EnableIT

Function name

__STATIC_INLINE void LL_RNG_EnableIT (RNG_TypeDef * RNGx)

Function description

Enable Random Number Generator Interrupt (applies for either Seed error, Clock Error or Data ready interrupts)

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR IE LL_RNG_EnableIT

LL_RNG_DisableIT

Function name

__STATIC_INLINE void LL_RNG_DisableIT (RNG_TypeDef * RNGx)

Function description

Disable Random Number Generator Interrupt (applies for either Seed error, Clock Error or Data ready interrupts)

Parameters

- **RNGx:** RNG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR IE LL_RNG_DisableIT

LL_RNG_IsEnabledIT

Function name

__STATIC_INLINE uint32_t LL_RNG_IsEnabledIT (RNG_TypeDef * RNGx)

Function description

Check if Random Number Generator Interrupt is enabled (applies for either Seed error, Clock Error or Data ready interrupts)

Parameters

- **RNGx:** RNG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR IE LL_RNG_IsEnabledIT

LL_RNG_ReadRandData32

Function name

__STATIC_INLINE uint32_t LL_RNG_ReadRandData32 (RNG_TypeDef * RNGx)

Function description

Return32-bit Random Number value.

Parameters

- **RNGx:** RNG Instance

Return values

- **Generated:** 32-bit random value

Reference Manual to LL API cross reference:

- DR RNDATA LL_RNG_ReadRandData32

LL_RNG_Init

Function name

ErrorStatus LL_RNG_Init (RNG_TypeDef * RNGx, LL_RNG_InitTypeDef * RNG_InitStruct)

Function description

Initialize RNG registers according to the specified parameters in RNG_InitStruct.

Parameters

- **RNGx:** RNG Instance
- **RNG_InitStruct:** pointer to a LL_RNG_InitTypeDef structure that contains the configuration information for the specified RNG peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RNG registers are initialized according to RNG_InitStruct content
  - ERROR: not applicable

LL_RNG_StructInit

Function name

void LL_RNG_StructInit (LL_RNG_InitTypeDef * RNG_InitStruct)

Function description

Set each LL_RNG_InitTypeDef field to default value.

Parameters

- **RNG_InitStruct:** pointer to a LL_RNG_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_RNG_DeInit

Function name

ErrorStatus LL_RNG_DeInit (RNG_TypeDef * RNGx)

Function description

De-initialize RNG registers (Registers restored to their default values).

Parameters

- **RNGx:** RNG Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RNG registers are de-initialized
  - ERROR: not applicable

121.3 RNG Firmware driver defines

The following section lists the various define and macros of the module.

121.3.1 RNG

RNG

Clock Error Detection

LL_RNG_CED_ENABLE

Clock error detection enabled

LL_RNG_CED_DISABLE

Clock error detection disabled

Get Flags Defines

LL_RNG_SR_DRDY

Register contains valid random data

LL_RNG_SR_CECS

Clock error current status

LL_RNG_SR_SECS

Seed error current status

LL_RNG_SR_CEIS

Clock error interrupt status

LL_RNG_SR_SEIS

Seed error interrupt status

IT Defines

LL_RNG_CR_IE

RNG Interrupt enable

Common Write and read registers Macros

LL_RNG_WriteReg

Description:

- Write a value in RNG register.

Parameters:

- __INSTANCE__: RNG Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_RNG_ReadReg

Description:

- Read a value in RNG register.

Parameters:

- __INSTANCE__: RNG Instance
- __REG__: Register to be read

Return value:

- Register: value

122 LL RTC Generic Driver

122.1 RTC Firmware driver registers structures

122.1.1 LL_RTC_InitTypeDef

LL_RTC_InitTypeDef is defined in the stm32h7xx_ll_rtc.h

Data Fields

- ***uint32_t HourFormat***
- ***uint32_t AsynchPrescaler***
- ***uint32_t SynchPrescaler***

Field Documentation

- ***uint32_t LL_RTC_InitTypeDef::HourFormat***

  Specifies the RTC Hours Format. This parameter can be a value of ***RTC_LL_EC_HOURFORMAT***This feature can be modified afterwards using unitary function **LL_RTC_SetHourFormat()**.
- ***uint32_t LL_RTC_InitTypeDef::AsynchPrescaler***

  Specifies the RTC Asynchronous Predivider value. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0x7FThis feature can be modified afterwards using unitary function **LL_RTC_SetAsynchPrescaler()**.
- ***uint32_t LL_RTC_InitTypeDef::SynchPrescaler***

  Specifies the RTC Synchronous Predivider value. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0x7FFFThis feature can be modified afterwards using unitary function **LL_RTC_SetSynchPrescaler()**.

122.1.2 LL_RTC_TimeTypeDef

LL_RTC_TimeTypeDef is defined in the stm32h7xx_ll_rtc.h

Data Fields

- ***uint32_t TimeFormat***
- ***uint8_t Hours***
- ***uint8_t Minutes***
- ***uint8_t Seconds***

Field Documentation

- ***uint32_t LL_RTC_TimeTypeDef::TimeFormat***

  Specifies the RTC AM/PM Time. This parameter can be a value of ***RTC_LL_EC_TIME_FORMAT***This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetFormat()**.
- ***uint8_t LL_RTC_TimeTypeDef::Hours***

  Specifies the RTC Time Hours. This parameter must be a number between Min_Data = 0 and Max_Data = 12 if the **LL_RTC_TIME_FORMAT_PM** is selected. This parameter must be a number between Min_Data = 0 and Max_Data = 23 if the **LL_RTC_TIME_FORMAT_AM_OR_24** is selected.This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetHour()**.
- ***uint8_t LL_RTC_TimeTypeDef::Minutes***

  Specifies the RTC Time Minutes. This parameter must be a number between Min_Data = 0 and Max_Data = 59This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetMinute()**.
- ***uint8_t LL_RTC_TimeTypeDef::Seconds***

  Specifies the RTC Time Seconds. This parameter must be a number between Min_Data = 0 and Max_Data = 59This feature can be modified afterwards using unitary function **LL_RTC_TIME_SetSecond()**.

122.1.3 LL_RTC_DateTypeDef

LL_RTC_DateTypeDef is defined in the stm32h7xx_ll_rtc.h

Data Fields

- ***uint8_t WeekDay***
- ***uint8_t Month***
- ***uint8_t Day***
- ***uint8_t Year***

Field Documentation

- ***uint8_t LL_RTC_DateTypeDef::WeekDay***

  Specifies the RTC Date WeekDay. This parameter can be a value of ***RTC_LL_EC_WEEKDAY***This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetWeekDay()**.
- ***uint8_t LL_RTC_DateTypeDef::Month***

  Specifies the RTC Date Month. This parameter can be a value of ***RTC_LL_EC_MONTH***This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetMonth()**.
- ***uint8_t LL_RTC_DateTypeDef::Day***

  Specifies the RTC Date Day. This parameter must be a number between Min_Data = 1 and Max_Data = 31This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetDay()**.
- ***uint8_t LL_RTC_DateTypeDef::Year***

  Specifies the RTC Date Year. This parameter must be a number between Min_Data = 0 and Max_Data = 99This feature can be modified afterwards using unitary function **LL_RTC_DATE_SetYear()**.

122.1.4 LL_RTC_AlarmTypeDef

LL_RTC_AlarmTypeDef is defined in the stm32h7xx_ll_rtc.h

Data Fields

- ***LL_RTC_TimeTypeDef AlarmTime***
- ***uint32_t AlarmMask***
- ***uint32_t AlarmDateWeekDaySel***
- ***uint8_t AlarmDateWeekDay***

Field Documentation

- ***LL_RTC_TimeTypeDef LL_RTC_AlarmTypeDef::AlarmTime***

  Specifies the RTC Alarm Time members.
- ***uint32_t LL_RTC_AlarmTypeDef::AlarmMask***

  Specifies the RTC Alarm Masks. This parameter can be a value of ***RTC_LL_EC_ALMA_MASK*** for ALARM A or ***RTC_LL_EC_ALMB_MASK*** for ALARM B.This feature can be modified afterwards using unitary function **LL_RTC_ALMA_SetMask()** for ALARM A or **LL_RTC_ALMB_SetMask()** for ALARM B
- ***uint32_t LL_RTC_AlarmTypeDef::AlarmDateWeekDaySel***

  Specifies the RTC Alarm is on day or WeekDay. This parameter can be a value of ***RTC_LL_EC_ALMA_WEEKDAY_SELECTION*** for ALARM A or ***RTC_LL_EC_ALMB_WEEKDAY_SELECTION*** for ALARM BThis feature can be modified afterwards using unitary function **LL_RTC_ALMA_EnableWeekday()** or **LL_RTC_ALMA_DisableWeekday()** for ALARM A or **LL_RTC_ALMB_EnableWeekday()** or **LL_RTC_ALMB_DisableWeekday()** for ALARM B
- ***uint8_t LL_RTC_AlarmTypeDef::AlarmDateWeekDay***

  Specifies the RTC Alarm Day/WeekDay. If AlarmDateWeekDaySel set to day, this parameter must be a number between Min_Data = 1 and Max_Data = 31.This feature can be modified afterwards using unitary function **LL_RTC_ALMA_SetDay()** for ALARM A or **LL_RTC_ALMB_SetDay()** for ALARM B.If AlarmDateWeekDaySel set to Weekday, this parameter can be a value of ***RTC_LL_EC_WEEKDAY***.This feature can be modified afterwards using unitary function **LL_RTC_ALMA_SetWeekDay()** for ALARM A or **LL_RTC_ALMB_SetWeekDay()** for ALARM B.

122.2 RTC Firmware driver API description

The following section lists the various functions of the RTC library.

122.2.1 Detailed description of functions

LL_RTC_SetHourFormat

Function name

__STATIC_INLINE void LL_RTC_SetHourFormat (RTC_TypeDef * RTCx, uint32_t HourFormat)

Function description

Set Hours format (24 hour/day or AM/PM hour format)

Parameters

- **RTCx:** RTC Instance
- **HourFormat:** This parameter can be one of the following values:
  - LL_RTC_HOURFORMAT_24HOUR
  - LL_RTC_HOURFORMAT_AMPM

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_CR FMT LL_RTC_SetHourFormat

LL_RTC_GetHourFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_GetHourFormat (RTC_TypeDef * RTCx)

Function description

Get Hours format (24 hour/day or AM/PM hour format)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_HOURFORMAT_24HOUR
  - LL_RTC_HOURFORMAT_AMPM

Reference Manual to LL API cross reference:

- RTC_CR FMT LL_RTC_GetHourFormat

LL_RTC_SetAlarmOutEvent

Function name

__STATIC_INLINE void LL_RTC_SetAlarmOutEvent (RTC_TypeDef * RTCx, uint32_t AlarmOutput)

Function description

Select the flag to be routed to RTC_ALARM output.

Parameters

- **RTCx:** RTC Instance
- **AlarmOutput:** This parameter can be one of the following values:
  - LL_RTC_ALARMOUT_DISABLE
  - LL_RTC_ALARMOUT_ALMA
  - LL_RTC_ALARMOUT_ALMB
  - LL_RTC_ALARMOUT_WAKEUP

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR OSEL LL_RTC_SetAlarmOutEvent

LL_RTC_GetAlarmOutEvent

Function name

__STATIC_INLINE uint32_t LL_RTC_GetAlarmOutEvent (RTC_TypeDef * RTCx)

Function description

Get the flag to be routed to RTC_ALARM output.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_ALARMOUT_DISABLE
  - LL_RTC_ALARMOUT_ALMA
  - LL_RTC_ALARMOUT_ALMB
  - LL_RTC_ALARMOUT_WAKEUP

Reference Manual to LL API cross reference:

- RTC_CR OSEL LL_RTC_GetAlarmOutEvent

LL_RTC_SetAlarmOutputType

Function name

__STATIC_INLINE void LL_RTC_SetAlarmOutputType (RTC_TypeDef * RTCx, uint32_t Output)

Function description

Set RTC_ALARM output type (ALARM in push-pull or open-drain output)

Parameters

- **RTCx:** RTC Instance
- **Output:** This parameter can be one of the following values:
  - LL_RTC_ALARM_OUTPUTTYPE_OPENDRAIN
  - LL_RTC_ALARM_OUTPUTTYPE_PUSHPULL

Return values

- **None:**

Notes

- Used only when RTC_ALARM is mapped on PC13

Reference Manual to LL API cross reference:

- OR ALARMOUTTYPE LL_RTC_SetAlarmOutputType

LL_RTC_GetAlarmOutputType

Function name

__STATIC_INLINE uint32_t LL_RTC_GetAlarmOutputType (RTC_TypeDef * RTCx)

Function description

Get RTC_ALARM output type (ALARM in push-pull or open-drain output)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_ALARM_OUTPUTTYPE_OPENDRAIN
  - LL_RTC_ALARM_OUTPUTTYPE_PUSHPULL

Notes

- used only when RTC_ALARM is mapped on PC13

Reference Manual to LL API cross reference:

- OR ALARMOUTTYPE LL_RTC_GetAlarmOutputType

LL_RTC_EnableInitMode

Function name

__STATIC_INLINE void LL_RTC_EnableInitMode (RTC_TypeDef * RTCx)

Function description

Enable initialization mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Initialization mode is used to program time and date register (RTC_TR and RTC_DR) and prescaler register (RTC_PRER). Counters are stopped and start counting from the new value when INIT is reset.

Reference Manual to LL API cross reference:

- ISR INIT LL_RTC_EnableInitMode

LL_RTC_DisableInitMode

Function name

__STATIC_INLINE void LL_RTC_DisableInitMode (RTC_TypeDef * RTCx)

Function description

Disable initialization mode (Free running mode)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR INIT LL_RTC_DisableInitMode

LL_RTC_SetOutputPolarity

Function name

__STATIC_INLINE void LL_RTC_SetOutputPolarity (RTC_TypeDef * RTCx, uint32_t Polarity)

Function description

Set Output polarity (pin is low when ALRAF/ALRBF/WUTF is asserted)

Parameters

- **RTCx:** RTC Instance
- **Polarity:** This parameter can be one of the following values:
  - LL_RTC_OUTPUTPOLARITY_PIN_HIGH
  - LL_RTC_OUTPUTPOLARITY_PIN_LOW

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR POL LL_RTC_SetOutputPolarity

LL_RTC_GetOutputPolarity

Function name

__STATIC_INLINE uint32_t LL_RTC_GetOutputPolarity (RTC_TypeDef * RTCx)

Function description

Get Output polarity.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_OUTPUTPOLARITY_PIN_HIGH
  - LL_RTC_OUTPUTPOLARITY_PIN_LOW

Reference Manual to LL API cross reference:

- RTC_CR POL LL_RTC_GetOutputPolarity

LL_RTC_EnableShadowRegBypass

Function name

__STATIC_INLINE void LL_RTC_EnableShadowRegBypass (RTC_TypeDef * RTCx)

Function description

Enable Bypass the shadow registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR BYPSHAD LL_RTC_EnableShadowRegBypass

LL_RTC_DisableShadowRegBypass

Function name

__STATIC_INLINE void LL_RTC_DisableShadowRegBypass (RTC_TypeDef * RTCx)

Function description

Disable Bypass the shadow registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_CR BYPSHAD LL_RTC_DisableShadowRegBypass

LL_RTC_IsShadowRegBypassEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_IsShadowRegBypassEnabled (RTC_TypeDef * RTCx)

Function description

Check if Shadow registers bypass is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR BYPSHAD LL_RTC_IsShadowRegBypassEnabled

LL_RTC_EnableRefClock

Function name

__STATIC_INLINE void LL_RTC_EnableRefClock (RTC_TypeDef * RTCx)

Function description

Enable RTC_REFIN reference clock detection (50 or 60 Hz)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_CR REFCKON LL_RTC_EnableRefClock

LL_RTC_DisableRefClock

Function name

__STATIC_INLINE void LL_RTC_DisableRefClock (RTC_TypeDef * RTCx)

Function description

Disable RTC_REFIN reference clock detection (50 or 60 Hz)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_CR REFCKON LL_RTC_DisableRefClock

LL_RTC_SetAsynchPrescaler

Function name

__STATIC_INLINE void LL_RTC_SetAsynchPrescaler (RTC_TypeDef * RTCx, uint32_t AsynchPrescaler)

Function description

Set Asynchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance
- **AsynchPrescaler:** Value between Min_Data = 0 and Max_Data = 0x7F

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_A LL_RTC_SetAsynchPrescaler

LL_RTC_SetSynchPrescaler

Function name

__STATIC_INLINE void LL_RTC_SetSynchPrescaler (RTC_TypeDef * RTCx, uint32_t SynchPrescaler)

Function description

Set Synchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance
- **SynchPrescaler:** Value between Min_Data = 0 and Max_Data = 0x7FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_S LL_RTC_SetSynchPrescaler

LL_RTC_GetAsynchPrescaler

Function name

__STATIC_INLINE uint32_t LL_RTC_GetAsynchPrescaler (RTC_TypeDef * RTCx)

Function description

Get Asynchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data = 0 and Max_Data = 0x7F

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_A LL_RTC_GetAsynchPrescaler

LL_RTC_GetSynchPrescaler

Function name

__STATIC_INLINE uint32_t LL_RTC_GetSynchPrescaler (RTC_TypeDef * RTCx)

Function description

Get Synchronous prescaler factor.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data = 0 and Max_Data = 0x7FFF

Reference Manual to LL API cross reference:

- RTC_PRER PREDIV_S LL_RTC_GetSynchPrescaler

LL_RTC_EnableWriteProtection

Function name

__STATIC_INLINE void LL_RTC_EnableWriteProtection (RTC_TypeDef * RTCx)

Function description

Enable the write protection for RTC registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_WPR KEY LL_RTC_EnableWriteProtection

LL_RTC_DisableWriteProtection

Function name

__STATIC_INLINE void LL_RTC_DisableWriteProtection (RTC_TypeDef * RTCx)

Function description

Disable the write protection for RTC registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_WPR KEY LL_RTC_DisableWriteProtection

LL_RTC_EnableOutRemap

Function name

__STATIC_INLINE void LL_RTC_EnableOutRemap (RTC_TypeDef * RTCx)

Function description

Enable RTC_OUT remap.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- OR OUT_RMP LL_RTC_EnableOutRemap

LL_RTC_DisableOutRemap

Function name

__STATIC_INLINE void LL_RTC_DisableOutRemap (RTC_TypeDef * RTCx)

Function description

Disable RTC_OUT remap.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- OR OUT_RMP LL_RTC_DisableOutRemap

LL_RTC_TIME_SetFormat

Function name

__STATIC_INLINE void LL_RTC_TIME_SetFormat (RTC_TypeDef * RTCx, uint32_t TimeFormat)

Function description

Set time format (AM/24-hour or PM notation)

Parameters

- **RTCx:** RTC Instance
- **TimeFormat:** This parameter can be one of the following values:
  - LL_RTC_TIME_FORMAT_AM_OR_24
  - LL_RTC_TIME_FORMAT_PM

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)

Reference Manual to LL API cross reference:

- RTC_TR PM LL_RTC_TIME_SetFormat

LL_RTC_TIME_GetFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetFormat (RTC_TypeDef * RTCx)

Function description

Get time format (AM or PM notation)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TIME_FORMAT_AM_OR_24
  - LL_RTC_TIME_FORMAT_PM

Notes

- if shadow mode is disabled (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).

Reference Manual to LL API cross reference:

- RTC_TR PM LL_RTC_TIME_GetFormat

LL_RTC_TIME_SetHour

Function name

__STATIC_INLINE void LL_RTC_TIME_SetHour (RTC_TypeDef * RTCx, uint32_t Hours)

Function description

Set Hours in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert hour from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_TR HT LL_RTC_TIME_SetHour RTC_TR HU LL_RTC_TIME_SetHour

LL_RTC_TIME_GetHour

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetHour (RTC_TypeDef * RTCx)

Function description

Get Hours in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Notes

- if shadow mode is disabled (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert hour from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TR HT LL_RTC_TIME_GetHour RTC_TR HU LL_RTC_TIME_GetHour

LL_RTC_TIME_SetMinute

Function name

__STATIC_INLINE void LL_RTC_TIME_SetMinute (RTC_TypeDef * RTCx, uint32_t Minutes)

Function description

Set Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Minutes from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_TR MNT LL_RTC_TIME_SetMinute RTC_TR MNU LL_RTC_TIME_SetMinute

LL_RTC_TIME_GetMinute

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetMinute (RTC_TypeDef * RTCx)

Function description

Get Minutes in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- if shadow mode is disabled (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert minute from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TR MNT LL_RTC_TIME_GetMinute RTC_TR MNU LL_RTC_TIME_GetMinute

LL_RTC_TIME_SetSecond

Function name

__STATIC_INLINE void LL_RTC_TIME_SetSecond (RTC_TypeDef * RTCx, uint32_t Seconds)

Function description

Set Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Seconds from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_TR ST LL_RTC_TIME_SetSecond RTC_TR SU LL_RTC_TIME_SetSecond

LL_RTC_TIME_GetSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetSecond (RTC_TypeDef * RTCx)

Function description

Get Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- if shadow mode is disabled (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Seconds from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_TR ST LL_RTC_TIME_GetSecond RTC_TR SU LL_RTC_TIME_GetSecond

LL_RTC_TIME_Config

Function name

__STATIC_INLINE void LL_RTC_TIME_Config (RTC_TypeDef * RTCx, uint32_t Format12_24, uint32_t Hours, uint32_t Minutes, uint32_t Seconds)

Function description

Set time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Format12_24:** This parameter can be one of the following values:
  - LL_RTC_TIME_FORMAT_AM_OR_24
  - LL_RTC_TIME_FORMAT_PM
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- It can be written in initialization mode only (LL_RTC_EnableInitMode function)
- TimeFormat and Hours should follow the same format

Reference Manual to LL API cross reference:

- RTC_TR PM LL_RTC_TIME_Config RTC_TR HT LL_RTC_TIME_Config RTC_TR HU LL_RTC_TIME_Config RTC_TR MNT LL_RTC_TIME_Config RTC_TR MNU LL_RTC_TIME_Config RTC_TR ST LL_RTC_TIME_Config RTC_TR SU LL_RTC_TIME_Config

LL_RTC_TIME_Get

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_Get (RTC_TypeDef * RTCx)

Function description

Get time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Combination:** of hours, minutes and seconds (Format: 0x00HHMMSS).

Notes

- if shadow mode is disabled (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- Read either RTC_SSR or RTC_TR locks the values in the higher-order calendar shadow registers until RTC_DR is read (LL_RTC_ReadReg(RTC, DR)).
- helper macros __LL_RTC_GET_HOUR, __LL_RTC_GET_MINUTE and __LL_RTC_GET_SECOND are available to get independently each parameter.

Reference Manual to LL API cross reference:

- RTC_TR HT LL_RTC_TIME_Get RTC_TR HU LL_RTC_TIME_Get RTC_TR MNT LL_RTC_TIME_Get RTC_TR MNU LL_RTC_TIME_Get RTC_TR ST LL_RTC_TIME_Get RTC_TR SU LL_RTC_TIME_Get

LL_RTC_TIME_EnableDayLightStore

Function name

__STATIC_INLINE void LL_RTC_TIME_EnableDayLightStore (RTC_TypeDef * RTCx)

Function description

Memorize whether the daylight saving time change has been performed.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR BKP LL_RTC_TIME_EnableDayLightStore

LL_RTC_TIME_DisableDayLightStore

Function name

__STATIC_INLINE void LL_RTC_TIME_DisableDayLightStore (RTC_TypeDef * RTCx)

Function description

Disable memorization whether the daylight saving time change has been performed.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR BKP LL_RTC_TIME_DisableDayLightStore

LL_RTC_TIME_IsDayLightStoreEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_IsDayLightStoreEnabled (RTC_TypeDef * RTCx)

Function description

Check if RTC Day Light Saving stored operation has been enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR BKP LL_RTC_TIME_IsDayLightStoreEnabled

LL_RTC_TIME_DecHour

Function name

__STATIC_INLINE void LL_RTC_TIME_DecHour (RTC_TypeDef * RTCx)

Function description

Subtract 1 hour (winter time change)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR SUB1H LL_RTC_TIME_DecHour

LL_RTC_TIME_IncHour

Function name

__STATIC_INLINE void LL_RTC_TIME_IncHour (RTC_TypeDef * RTCx)

Function description

Add 1 hour (summer time change)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ADD1H LL_RTC_TIME_IncHour

LL_RTC_TIME_GetSubSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_TIME_GetSubSecond (RTC_TypeDef * RTCx)

Function description

Get Sub second value in the synchronous prescaler counter.

Parameters

- **RTCx:** RTC Instance

Return values

- **Sub:** second value (number between 0 and 65535)

Notes

- You can use both SubSeconds value and SecondFraction (PREDIV_S through LL_RTC_GetSynchPrescaler function) terms returned to convert Calendar SubSeconds value in second fraction ratio with time unit following generic formula: ==> Seconds fraction ratio * time_unit= [(SecondFraction-SubSeconds)/(SecondFraction+1)] * time_unit This conversion can be performed only if no shift operation is pending (ie. SHFP=0) when PREDIV_S >= SS.

Reference Manual to LL API cross reference:

- RTC_SSR SS LL_RTC_TIME_GetSubSecond

LL_RTC_TIME_Synchronize

Function name

__STATIC_INLINE void LL_RTC_TIME_Synchronize (RTC_TypeDef * RTCx, uint32_t ShiftSecond, uint32_t Fraction)

Function description

Synchronize to a remote clock with a high degree of precision.

Parameters

- **RTCx:** RTC Instance
- **ShiftSecond:** This parameter can be one of the following values:
  - LL_RTC_SHIFT_SECOND_DELAY
  - LL_RTC_SHIFT_SECOND_ADVANCE
- **Fraction:** Number of Seconds Fractions (any value from 0 to 0x7FFF)

Return values

- **None:**

Notes

- This operation effectively subtracts from (delays) or advance the clock of a fraction of a second.
- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- When REFCKON is set, firmware must not write to Shift control register.

Reference Manual to LL API cross reference:

- RTC_SHIFTR ADD1S LL_RTC_TIME_Synchronize RTC_SHIFTR SUBFS LL_RTC_TIME_Synchronize

LL_RTC_DATE_SetYear

Function name

__STATIC_INLINE void LL_RTC_DATE_SetYear (RTC_TypeDef * RTCx, uint32_t Year)

Function description

Set Year in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Year:** Value between Min_Data=0x00 and Max_Data=0x99

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Year from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_DR YT LL_RTC_DATE_SetYear RTC_DR YU LL_RTC_DATE_SetYear

LL_RTC_DATE_GetYear

Function name

__STATIC_INLINE uint32_t LL_RTC_DATE_GetYear (RTC_TypeDef * RTCx)

Function description

Get Year in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x99

Notes

- if shadow mode is disabled (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Year from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_DR YT LL_RTC_DATE_GetYear RTC_DR YU LL_RTC_DATE_GetYear

LL_RTC_DATE_SetWeekDay

Function name

__STATIC_INLINE void LL_RTC_DATE_SetWeekDay (RTC_TypeDef * RTCx, uint32_t WeekDay)

Function description

Set Week day.

Parameters

- **RTCx:** RTC Instance
- **WeekDay:** This parameter can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_DR WDU LL_RTC_DATE_SetWeekDay

LL_RTC_DATE_GetWeekDay

Function name

__STATIC_INLINE uint32_t LL_RTC_DATE_GetWeekDay (RTC_TypeDef * RTCx)

Function description

Get Week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

Notes

- if shadow mode is disabled (BYPSHAD=0), need to check if RSF flag is set before reading this bit

Reference Manual to LL API cross reference:

- RTC_DR WDU LL_RTC_DATE_GetWeekDay

LL_RTC_DATE_SetMonth

Function name

__STATIC_INLINE void LL_RTC_DATE_SetMonth (RTC_TypeDef * RTCx, uint32_t Month)

Function description

Set Month in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Month:** This parameter can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Month from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_DR MT LL_RTC_DATE_SetMonth RTC_DR MU LL_RTC_DATE_SetMonth

LL_RTC_DATE_GetMonth

Function name

__STATIC_INLINE uint32_t LL_RTC_DATE_GetMonth (RTC_TypeDef * RTCx)

Function description

Get Month in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER

Notes

- if shadow mode is disabled (BYPSHAD=0), need to check if RSF flag is set before reading this bit
- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Month from BCD to Binary format

LL_RTC_DATE_Config

Function name

__STATIC_INLINE void LL_RTC_DATE_Config (RTC_TypeDef * RTCx, uint32_t WeekDay, uint32_t Day, uint32_t Month, uint32_t Year)

Function description

Set date (WeekDay, Day, Month and Year) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **WeekDay:** This parameter can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY
- **Day:** Value between Min_Data=0x01 and Max_Data=0x31
- **Month:** This parameter can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER
- **Year:** Value between Min_Data=0x00 and Max_Data=0x99

Return values

- **None:**

LL_RTC_ALMA_Enable

Function name

__STATIC_INLINE void LL_RTC_ALMA_Enable (RTC_TypeDef * RTCx)

Function description

Enable Alarm A.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAE LL_RTC_ALMA_Enable

LL_RTC_ALMA_Disable

Function name

__STATIC_INLINE void LL_RTC_ALMA_Disable (RTC_TypeDef * RTCx)

Function description

Disable Alarm A.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAE LL_RTC_ALMA_Disable

LL_RTC_ALMA_SetMask

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetMask (RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Specify the Alarm A masks.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  - LL_RTC_ALMA_MASK_NONE
  - LL_RTC_ALMA_MASK_DATEWEEKDAY
  - LL_RTC_ALMA_MASK_HOURS
  - LL_RTC_ALMA_MASK_MINUTES
  - LL_RTC_ALMA_MASK_SECONDS
  - LL_RTC_ALMA_MASK_ALL

Return values

- **None:**

LL_RTC_ALMA_EnableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMA_EnableWeekday (RTC_TypeDef * RTCx)

Function description

Enable AlarmA Week day selection (DU[3:0] represents the week day.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR WDSEL LL_RTC_ALMA_EnableWeekday

LL_RTC_ALMA_DisableWeekday

Function name

__STATIC_INLINE void LL_RTC_ALMA_DisableWeekday (RTC_TypeDef * RTCx)

Function description

Disable AlarmA Week day selection (DU[3:0] represents the date)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR WDSEL LL_RTC_ALMA_DisableWeekday

LL_RTC_ALMA_SetDay

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetDay (RTC_TypeDef * RTCx, uint32_t Day)

Function description

Set ALARM A Day in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Day:** Value between Min_Data=0x01 and Max_Data=0x31

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Day from binary to BCD format

LL_RTC_ALMA_SetTimeFormat

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetTimeFormat (RTC_TypeDef * RTCx, uint32_t TimeFormat)

Function description

Set Alarm A time format (AM/24-hour or PM notation)

Parameters

- **RTCx:** RTC Instance
- **TimeFormat:** This parameter can be one of the following values:
  - LL_RTC_ALMA_TIME_FORMAT_AM
  - LL_RTC_ALMA_TIME_FORMAT_PM

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTC_ALRMAR PM LL_RTC_ALMA_SetTimeFormat

LL_RTC_ALMA_GetTimeFormat

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetTimeFormat (RTC_TypeDef * RTCx)

Function description

Get Alarm A time format (AM or PM notation)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_ALMA_TIME_FORMAT_AM
  - LL_RTC_ALMA_TIME_FORMAT_PM

Reference Manual to LL API cross reference:

- RTC_ALRMAR PM LL_RTC_ALMA_GetTimeFormat

LL_RTC_ALMA_SetHour

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetHour (RTC_TypeDef * RTCx, uint32_t Hours)

Function description

Set ALARM A Hours in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23

Return values

- **None:**

Notes

- helper macro __LL_RTC_CONVERT_BIN2BCD is available to convert Hours from binary to BCD format

Reference Manual to LL API cross reference:

- RTC_ALRMAR HT LL_RTC_ALMA_SetHour RTC_ALRMAR HU LL_RTC_ALMA_SetHour

LL_RTC_ALMA_GetHour

Function name

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetSecond (RTC_TypeDef * RTCx)

Function description

Get ALARM A Seconds in BCD format.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x59

Notes

- helper macro __LL_RTC_CONVERT_BCD2BIN is available to convert Seconds from BCD to Binary format

Reference Manual to LL API cross reference:

- RTC_ALRMAR ST LL_RTC_ALMA_GetSecond RTC_ALRMAR SU LL_RTC_ALMA_GetSecond

LL_RTC_ALMA_ConfigTime

Function name

__STATIC_INLINE void LL_RTC_ALMA_ConfigTime (RTC_TypeDef * RTCx, uint32_t Format12_24, uint32_t Hours, uint32_t Minutes, uint32_t Seconds)

Function description

Set Alarm A Time (hour, minute and second) in BCD format.

Parameters

- **RTCx:** RTC Instance
- **Format12_24:** This parameter can be one of the following values:
  - LL_RTC_ALMA_TIME_FORMAT_AM
  - LL_RTC_ALMA_TIME_FORMAT_PM
- **Hours:** Value between Min_Data=0x01 and Max_Data=0x12 or between Min_Data=0x00 and Max_Data=0x23
- **Minutes:** Value between Min_Data=0x00 and Max_Data=0x59
- **Seconds:** Value between Min_Data=0x00 and Max_Data=0x59

Return values

- **None:**

LL_RTC_ALMA_GetSubSecondMask

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetSubSecondMask (RTC_TypeDef * RTCx)

Function description

Get Alarm A Mask the most-significant bits starting at this bit.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xF

Reference Manual to LL API cross reference:

- RTC_ALRMASSR MASKSS LL_RTC_ALMA_GetSubSecondMask

LL_RTC_ALMA_SetSubSecond

Function name

__STATIC_INLINE void LL_RTC_ALMA_SetSubSecond (RTC_TypeDef * RTCx, uint32_t Subsecond)

Function description

Set Alarm A Sub seconds value.

Parameters

- **RTCx:** RTC Instance
- **Subsecond:** Value between Min_Data=0x00 and Max_Data=0x7FFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RCT_ALRMASSR SS LL_RTC_ALMA_SetSubSecond

LL_RTC_ALMA_GetSubSecond

Function name

__STATIC_INLINE uint32_t LL_RTC_ALMA_GetSubSecond (RTC_TypeDef * RTCx)

Function description

Get Alarm A Sub seconds value.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x7FFF

Reference Manual to LL API cross reference:

- RCT_ALRMASSR SS LL_RTC_ALMA_GetSubSecond

LL_RTC_ALMB_Enable

Function name

__STATIC_INLINE void LL_RTC_ALMB_Enable (RTC_TypeDef * RTCx)

Function description

Enable Alarm B.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRBE LL_RTC_ALMB_Enable

LL_RTC_ALMB_Disable

Function name

__STATIC_INLINE void LL_RTC_ALMB_Disable (RTC_TypeDef * RTCx)

Function description

Disable Alarm B.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

__STATIC_INLINE void LL_RTC_TAMPER_EnableMask (RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Enable Tamper mask flag.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  - LL_RTC_TAMPER_MASK_TAMPER1
  - LL_RTC_TAMPER_MASK_TAMPER2
  - LL_RTC_TAMPER_MASK_TAMPER3

Return values

- **None:**

Notes

- Associated Tamper IT must not enabled when tamper mask is set.

Reference Manual to LL API cross reference:

- TAMPCR TAMP1MF LL_RTC_TAMPER_EnableMask TAMPCR TAMP2MF LL_RTC_TAMPER_EnableMask TAMPCR TAMP3MF LL_RTC_TAMPER_EnableMask

LL_RTC_TAMPER_DisableMask

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisableMask (RTC_TypeDef * RTCx, uint32_t Mask)

Function description

Disable Tamper mask flag.

Parameters

- **RTCx:** RTC Instance
- **Mask:** This parameter can be a combination of the following values:
  - LL_RTC_TAMPER_MASK_TAMPER1
  - LL_RTC_TAMPER_MASK_TAMPER2
  - LL_RTC_TAMPER_MASK_TAMPER3

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP1MF LL_RTC_TAMPER_DisableMask TAMPCR TAMP2MF LL_RTC_TAMPER_DisableMask TAMPCR TAMP3MF LL_RTC_TAMPER_DisableMask

LL_RTC_TAMPER_EnableEraseBKP

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnableEraseBKP (RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Enable backup register erase after Tamper event detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - LL_RTC_TAMPER_NOERASE_TAMPER1
  - LL_RTC_TAMPER_NOERASE_TAMPER2
  - LL_RTC_TAMPER_NOERASE_TAMPER3

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP1NOERASE LL_RTC_TAMPER_EnableEraseBKP TAMPCR TAMP2NOERASE LL_RTC_TAMPER_EnableEraseBKP TAMPCR TAMP3NOERASE LL_RTC_TAMPER_EnableEraseBKP

LL_RTC_TAMPER_DisableEraseBKP

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisableEraseBKP (RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Disable backup register erase after Tamper event detection.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - LL_RTC_TAMPER_NOERASE_TAMPER1
  - LL_RTC_TAMPER_NOERASE_TAMPER2
  - LL_RTC_TAMPER_NOERASE_TAMPER3

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP1NOERASE LL_RTC_TAMPER_DisableEraseBKP TAMPCR TAMP2NOERASE LL_RTC_TAMPER_DisableEraseBKP TAMPCR TAMP3NOERASE LL_RTC_TAMPER_DisableEraseBKP

LL_RTC_TAMPER_DisablePullUp

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisablePullUp (RTC_TypeDef * RTCx)

Function description

Disable RTC_TAMPx pull-up disable (Disable precharge of RTC_TAMPx pins)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMPPUDIS LL_RTC_TAMPER_DisablePullUp

LL_RTC_TAMPER_EnablePullUp

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnablePullUp (RTC_TypeDef * RTCx)

Function description

Enable RTC_TAMPx pull-up disable (Precharge RTC_TAMPx pins before sampling)

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMPPUDIS LL_RTC_TAMPER_EnablePullUp

LL_RTC_TAMPER_SetPrecharge

Function name

__STATIC_INLINE void LL_RTC_TAMPER_SetPrecharge (RTC_TypeDef * RTCx, uint32_t Duration)

Function description

Set RTC_TAMPx precharge duration.

Parameters

- **RTCx:** RTC Instance
- **Duration:** This parameter can be one of the following values:
  - LL_RTC_TAMPER_DURATION_1RTCCLK
  - LL_RTC_TAMPER_DURATION_2RTCCLK
  - LL_RTC_TAMPER_DURATION_4RTCCLK
  - LL_RTC_TAMPER_DURATION_8RTCCLK

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMPPRCH LL_RTC_TAMPER_SetPrecharge

LL_RTC_TAMPER_GetPrecharge

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_GetPrecharge (RTC_TypeDef * RTCx)

Function description

Get RTC_TAMPx precharge duration.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TAMPER_DURATION_1RTCCLK
  - LL_RTC_TAMPER_DURATION_2RTCCLK
  - LL_RTC_TAMPER_DURATION_4RTCCLK
  - LL_RTC_TAMPER_DURATION_8RTCCLK

Reference Manual to LL API cross reference:

- TAMPCR TAMPPRCH LL_RTC_TAMPER_GetPrecharge

LL_RTC_TAMPER_SetFilterCount

Function name

__STATIC_INLINE void LL_RTC_TAMPER_SetFilterCount (RTC_TypeDef * RTCx, uint32_t FilterCount)

Function description

Set RTC_TAMPx filter count.

Parameters

- **RTCx:** RTC Instance
- **FilterCount:** This parameter can be one of the following values:
  - LL_RTC_TAMPER_FILTER_DISABLE
  - LL_RTC_TAMPER_FILTER_2SAMPLE
  - LL_RTC_TAMPER_FILTER_4SAMPLE
  - LL_RTC_TAMPER_FILTER_8SAMPLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMPFLT LL_RTC_TAMPER_SetFilterCount

LL_RTC_TAMPER_GetFilterCount

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_GetFilterCount (RTC_TypeDef * RTCx)

Function description

Get RTC_TAMPx filter count.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TAMPER_FILTER_DISABLE
  - LL_RTC_TAMPER_FILTER_2SAMPLE
  - LL_RTC_TAMPER_FILTER_4SAMPLE
  - LL_RTC_TAMPER_FILTER_8SAMPLE

Reference Manual to LL API cross reference:

- TAMPCR TAMPFLT LL_RTC_TAMPER_GetFilterCount

LL_RTC_TAMPER_SetSamplingFreq

Function name

__STATIC_INLINE void LL_RTC_TAMPER_SetSamplingFreq (RTC_TypeDef * RTCx, uint32_t SamplingFreq)

Function description

Set Tamper sampling frequency.

Parameters

- **RTCx:** RTC Instance
- **SamplingFreq:** This parameter can be one of the following values:
  - LL_RTC_TAMPER_SAMPLFREQDIV_32768
  - LL_RTC_TAMPER_SAMPLFREQDIV_16384
  - LL_RTC_TAMPER_SAMPLFREQDIV_8192
  - LL_RTC_TAMPER_SAMPLFREQDIV_4096
  - LL_RTC_TAMPER_SAMPLFREQDIV_2048
  - LL_RTC_TAMPER_SAMPLFREQDIV_1024
  - LL_RTC_TAMPER_SAMPLFREQDIV_512
  - LL_RTC_TAMPER_SAMPLFREQDIV_256

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMPFREQ LL_RTC_TAMPER_SetSamplingFreq

LL_RTC_TAMPER_GetSamplingFreq

Function name

__STATIC_INLINE uint32_t LL_RTC_TAMPER_GetSamplingFreq (RTC_TypeDef * RTCx)

Function description

Get Tamper sampling frequency.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_TAMPER_SAMPLFREQDIV_32768
  - LL_RTC_TAMPER_SAMPLFREQDIV_16384
  - LL_RTC_TAMPER_SAMPLFREQDIV_8192
  - LL_RTC_TAMPER_SAMPLFREQDIV_4096
  - LL_RTC_TAMPER_SAMPLFREQDIV_2048
  - LL_RTC_TAMPER_SAMPLFREQDIV_1024
  - LL_RTC_TAMPER_SAMPLFREQDIV_512
  - LL_RTC_TAMPER_SAMPLFREQDIV_256

Reference Manual to LL API cross reference:

- TAMPCR TAMPFREQ LL_RTC_TAMPER_GetSamplingFreq

LL_RTC_TAMPER_EnableActiveLevel

Function name

__STATIC_INLINE void LL_RTC_TAMPER_EnableActiveLevel (RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Enable Active level for Tamper input.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - LL_RTC_TAMPER_ACTIVELEVEL_TAMP1
  - LL_RTC_TAMPER_ACTIVELEVEL_TAMP2
  - LL_RTC_TAMPER_ACTIVELEVEL_TAMP3

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP1TRG LL_RTC_TAMPER_EnableActiveLevel TAMPCR TAMP2TRG LL_RTC_TAMPER_EnableActiveLevel TAMPCR TAMP3TRG LL_RTC_TAMPER_EnableActiveLevel

LL_RTC_TAMPER_DisableActiveLevel

Function name

__STATIC_INLINE void LL_RTC_TAMPER_DisableActiveLevel (RTC_TypeDef * RTCx, uint32_t Tamper)

Function description

Disable Active level for Tamper input.

Parameters

- **RTCx:** RTC Instance
- **Tamper:** This parameter can be a combination of the following values:
  - LL_RTC_TAMPER_ACTIVELEVEL_TAMP1
  - LL_RTC_TAMPER_ACTIVELEVEL_TAMP2
  - LL_RTC_TAMPER_ACTIVELEVEL_TAMP3

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP1TRG LL_RTC_TAMPER_DisableActiveLevel TAMPCR TAMP2TRG LL_RTC_TAMPER_DisableActiveLevel TAMPCR TAMP3TRG LL_RTC_TAMPER_DisableActiveLevel

LL_RTC_WAKEUP_Enable

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_Enable (RTC_TypeDef * RTCx)

Function description

Enable Wakeup timer.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTE LL_RTC_WAKEUP_Enable

LL_RTC_WAKEUP_Disable

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_Disable (RTC_TypeDef * RTCx)

Function description

Disable Wakeup timer.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTE LL_RTC_WAKEUP_Disable

LL_RTC_WAKEUP_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_RTC_WAKEUP_IsEnabled (RTC_TypeDef * RTCx)

Function description

Check if Wakeup timer is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CR WUTE LL_RTC_WAKEUP_IsEnabled

LL_RTC_WAKEUP_SetClock

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_SetClock (RTC_TypeDef * RTCx, uint32_t WakeupClock)

Function description

Select Wakeup clock.

Parameters

- **RTCx:** RTC Instance
- **WakeupClock:** This parameter can be one of the following values:
  - LL_RTC_WAKEUPCLOCK_DIV_16
  - LL_RTC_WAKEUPCLOCK_DIV_8
  - LL_RTC_WAKEUPCLOCK_DIV_4
  - LL_RTC_WAKEUPCLOCK_DIV_2
  - LL_RTC_WAKEUPCLOCK_CKSPRE
  - LL_RTC_WAKEUPCLOCK_CKSPRE_WUT

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RTC_CR WUTE bit = 0 and RTC_ISR WUTWF bit = 1

Reference Manual to LL API cross reference:

- RTC_CR WUCKSEL LL_RTC_WAKEUP_SetClock

LL_RTC_WAKEUP_GetClock

Function name

__STATIC_INLINE uint32_t LL_RTC_WAKEUP_GetClock (RTC_TypeDef * RTCx)

Function description

Get Wakeup clock.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_WAKEUPCLOCK_DIV_16
  - LL_RTC_WAKEUPCLOCK_DIV_8
  - LL_RTC_WAKEUPCLOCK_DIV_4
  - LL_RTC_WAKEUPCLOCK_DIV_2
  - LL_RTC_WAKEUPCLOCK_CKSPRE
  - LL_RTC_WAKEUPCLOCK_CKSPRE_WUT

Reference Manual to LL API cross reference:

- RTC_CR WUCKSEL LL_RTC_WAKEUP_GetClock

LL_RTC_WAKEUP_SetAutoReload

Function name

__STATIC_INLINE void LL_RTC_WAKEUP_SetAutoReload (RTC_TypeDef * RTCx, uint32_t Value)

Function description

Set Wakeup auto-reload value.

Parameters

- **RTCx:** RTC Instance
- **Value:** Value between Min_Data=0x00 and Max_Data=0xFFFF

Return values

- **None:**

Notes

- Bit can be written only when WUTWF is set to 1 in RTC_ISR

Reference Manual to LL API cross reference:

- RTC_WUTR WUT LL_RTC_WAKEUP_SetAutoReload

LL_RTC_WAKEUP_GetAutoReload

Function name

__STATIC_INLINE uint32_t LL_RTC_WAKEUP_GetAutoReload (RTC_TypeDef * RTCx)

Function description

Get Wakeup auto-reload value.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFFFF

Reference Manual to LL API cross reference:

- RTC_WUTR WUT LL_RTC_WAKEUP_GetAutoReload

LL_RTC_BAK_SetRegister

Function name

__STATIC_INLINE void LL_RTC_BAK_SetRegister (RTC_TypeDef * RTCx, uint32_t BackupRegister, uint32_t Data)

Function description

Writes a data in a specified RTC Backup data register.

Parameters

- **RTCx:** RTC Instance
- **BackupRegister:** This parameter can be one of the following values:
  - LL_RTC_BKP_DR0
  - LL_RTC_BKP_DR1
  - LL_RTC_BKP_DR2
  - LL_RTC_BKP_DR3
  - LL_RTC_BKP_DR4
  - LL_RTC_BKP_DR5
  - LL_RTC_BKP_DR6
  - LL_RTC_BKP_DR7
  - LL_RTC_BKP_DR8
  - LL_RTC_BKP_DR9
  - LL_RTC_BKP_DR10
  - LL_RTC_BKP_DR11
  - LL_RTC_BKP_DR12
  - LL_RTC_BKP_DR13
  - LL_RTC_BKP_DR14
  - LL_RTC_BKP_DR15
  - LL_RTC_BKP_DR16
  - LL_RTC_BKP_DR17
  - LL_RTC_BKP_DR18
  - LL_RTC_BKP_DR19
  - LL_RTC_BKP_DR20
  - LL_RTC_BKP_DR21
  - LL_RTC_BKP_DR22
  - LL_RTC_BKP_DR23
  - LL_RTC_BKP_DR24
  - LL_RTC_BKP_DR25
  - LL_RTC_BKP_DR26
  - LL_RTC_BKP_DR27
  - LL_RTC_BKP_DR28
  - LL_RTC_BKP_DR29
  - LL_RTC_BKP_DR30
  - LL_RTC_BKP_DR31
- **Data:** Value between Min_Data=0x00 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- BKPxR BKP LL_RTC_BAK_SetRegister

LL_RTC_BAK_GetRegister

Function name

__STATIC_INLINE uint32_t LL_RTC_BAK_GetRegister (RTC_TypeDef * RTCx, uint32_t BackupRegister)

Function description

Reads data from the specified RTC Backup data Register.

Parameters

- **RTCx:** RTC Instance
- **BackupRegister:** This parameter can be one of the following values:
  - LL_RTC_BKP_DR0
  - LL_RTC_BKP_DR1
  - LL_RTC_BKP_DR2
  - LL_RTC_BKP_DR3
  - LL_RTC_BKP_DR4
  - LL_RTC_BKP_DR5
  - LL_RTC_BKP_DR6
  - LL_RTC_BKP_DR7
  - LL_RTC_BKP_DR8
  - LL_RTC_BKP_DR9
  - LL_RTC_BKP_DR10
  - LL_RTC_BKP_DR11
  - LL_RTC_BKP_DR12
  - LL_RTC_BKP_DR13
  - LL_RTC_BKP_DR14
  - LL_RTC_BKP_DR15
  - LL_RTC_BKP_DR16
  - LL_RTC_BKP_DR17
  - LL_RTC_BKP_DR18
  - LL_RTC_BKP_DR19
  - LL_RTC_BKP_DR20
  - LL_RTC_BKP_DR21
  - LL_RTC_BKP_DR22
  - LL_RTC_BKP_DR23
  - LL_RTC_BKP_DR24
  - LL_RTC_BKP_DR25
  - LL_RTC_BKP_DR26
  - LL_RTC_BKP_DR27
  - LL_RTC_BKP_DR28
  - LL_RTC_BKP_DR29
  - LL_RTC_BKP_DR30
  - LL_RTC_BKP_DR31

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- BKPxR BKP LL_RTC_BAK_GetRegister

LL_RTC_CAL_SetOutputFreq

Function name

__STATIC_INLINE void LL_RTC_CAL_SetOutputFreq (RTC_TypeDef * RTCx, uint32_t Frequency)

Function description

Set Calibration output frequency (1 Hz or 512 Hz)

Parameters

- **RTCx:** RTC Instance
- **Frequency:** This parameter can be one of the following values:
  - LL_RTC_CALIB_OUTPUT_NONE
  - LL_RTC_CALIB_OUTPUT_1HZ
  - LL_RTC_CALIB_OUTPUT_512HZ

Return values

- **None:**

Notes

- Bits are write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR COE LL_RTC_CAL_SetOutputFreq RTC_CR COSEL LL_RTC_CAL_SetOutputFreq

LL_RTC_CAL_GetOutputFreq

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_GetOutputFreq (RTC_TypeDef * RTCx)

Function description

Get Calibration output frequency (1 Hz or 512 Hz)

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_CALIB_OUTPUT_NONE
  - LL_RTC_CALIB_OUTPUT_1HZ
  - LL_RTC_CALIB_OUTPUT_512HZ

Reference Manual to LL API cross reference:

- RTC_CR COE LL_RTC_CAL_GetOutputFreq RTC_CR COSEL LL_RTC_CAL_GetOutputFreq

LL_RTC_CAL_SetPulse

Function name

__STATIC_INLINE void LL_RTC_CAL_SetPulse (RTC_TypeDef * RTCx, uint32_t Pulse)

Function description

Insert or not One RTCCLK pulse every 2exp11 pulses (frequency increased by 488.5 ppm)

Parameters

- **RTCx:** RTC Instance
- **Pulse:** This parameter can be one of the following values:
  - LL_RTC_CALIB_INSERTPULSE_NONE
  - LL_RTC_CALIB_INSERTPULSE_SET

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0 in RTC_ISR

Reference Manual to LL API cross reference:

- RTC_CALR CALP LL_RTC_CAL_SetPulse

LL_RTC_CAL_IsPulseInserted

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_IsPulseInserted (RTC_TypeDef * RTCx)

Function description

Check if one RTCCLK has been inserted or not every 2exp11 pulses (frequency increased by 488.5 ppm)

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_CALR CALP LL_RTC_CAL_IsPulseInserted

LL_RTC_CAL_SetPeriod

Function name

__STATIC_INLINE void LL_RTC_CAL_SetPeriod (RTC_TypeDef * RTCx, uint32_t Period)

Function description

Set the calibration cycle period.

Parameters

- **RTCx:** RTC Instance
- **Period:** This parameter can be one of the following values:
  - LL_RTC_CALIB_PERIOD_32SEC
  - LL_RTC_CALIB_PERIOD_16SEC
  - LL_RTC_CALIB_PERIOD_8SEC

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0 in RTC_ISR

Reference Manual to LL API cross reference:

- RTC_CALR CALW8 LL_RTC_CAL_SetPeriod RTC_CALR CALW16 LL_RTC_CAL_SetPeriod

LL_RTC_CAL_GetPeriod

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_GetPeriod (RTC_TypeDef * RTCx)

Function description

Get the calibration cycle period.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_RTC_CALIB_PERIOD_32SEC
  - LL_RTC_CALIB_PERIOD_16SEC
  - LL_RTC_CALIB_PERIOD_8SEC

Reference Manual to LL API cross reference:

- RTC_CALR CALW8 LL_RTC_CAL_GetPeriod RTC_CALR CALW16 LL_RTC_CAL_GetPeriod

LL_RTC_CAL_SetMinus

Function name

__STATIC_INLINE void LL_RTC_CAL_SetMinus (RTC_TypeDef * RTCx, uint32_t CalibMinus)

Function description

Set Calibration minus.

Parameters

- **RTCx:** RTC Instance
- **CalibMinus:** Value between Min_Data=0x00 and Max_Data=0x1FF

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.
- Bit can be written only when RECALPF is set to 0 in RTC_ISR

Reference Manual to LL API cross reference:

- RTC_CALR CALM LL_RTC_CAL_SetMinus

LL_RTC_CAL_GetMinus

Function name

__STATIC_INLINE uint32_t LL_RTC_CAL_GetMinus (RTC_TypeDef * RTCx)

Function description

Get Calibration minus.

Parameters

- **RTCx:** RTC Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data= 0x1FF

Reference Manual to LL API cross reference:

- RTC_CALR CALM LL_RTC_CAL_GetMinus

LL_RTC_IsActiveFlag_ITS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ITS (RTC_TypeDef * RTCx)

Function description

Get Internal Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- RTC_ISR ITSF LL_RTC_IsActiveFlag_ITS

LL_RTC_IsActiveFlag_RECALP

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_RECALP (RTC_TypeDef * RTCx)

Function description

Get Recalibration pending Flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RECALPF LL_RTC_IsActiveFlag_RECALP

LL_RTC_IsActiveFlag_TAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP3 (RTC_TypeDef * RTCx)

Function description

Get RTC_TAMP3 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TAMP3F LL_RTC_IsActiveFlag_TAMP3

LL_RTC_IsActiveFlag_TAMP2

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP2 (RTC_TypeDef * RTCx)

Function description

Get RTC_TAMP2 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TAMP2F LL_RTC_IsActiveFlag_TAMP2

LL_RTC_IsActiveFlag_TAMP1

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TAMP1 (RTC_TypeDef * RTCx)

Function description

Get RTC_TAMP1 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TAMP1F LL_RTC_IsActiveFlag_TAMP1

LL_RTC_IsActiveFlag_TSOV

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TSOV (RTC_TypeDef * RTCx)

Function description

Get Time-stamp overflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TSOVF LL_RTC_IsActiveFlag_TSOV

LL_RTC_IsActiveFlag_TS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_TS (RTC_TypeDef * RTCx)

Function description

Get Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TSF LL_RTC_IsActiveFlag_TS

LL_RTC_IsActiveFlag_WUT

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_WUT (RTC_TypeDef * RTCx)

Function description

Get Wakeup timer flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR WUTF LL_RTC_IsActiveFlag_WUT

LL_RTC_IsActiveFlag_ALRB

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRB (RTC_TypeDef * RTCx)

Function description

Get Alarm B flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ALRBF LL_RTC_IsActiveFlag_ALRB

LL_RTC_IsActiveFlag_ALRA

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRA (RTC_TypeDef * RTCx)

Function description

Get Alarm A flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ALRAF LL_RTC_IsActiveFlag_ALRA

LL_RTC_ClearFlag_ITS

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ITS (RTC_TypeDef * RTCx)

Function description

Clear Internal Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR ITSF LL_RTC_ClearFlag_ITS

LL_RTC_ClearFlag_TAMP3

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP3 (RTC_TypeDef * RTCx)

Function description

Clear RTC_TAMP3 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR TAMP3F LL_RTC_ClearFlag_TAMP3

LL_RTC_ClearFlag_TAMP2

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP2 (RTC_TypeDef * RTCx)

Function description

Clear RTC_TAMP2 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR TAMP2F LL_RTC_ClearFlag_TAMP2

LL_RTC_ClearFlag_TAMP1

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TAMP1 (RTC_TypeDef * RTCx)

Function description

Clear RTC_TAMP1 detection flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR TAMP1F LL_RTC_ClearFlag_TAMP1

LL_RTC_ClearFlag_TSOV

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TSOV (RTC_TypeDef * RTCx)

Function description

Clear Time-stamp overflow flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR TSOVF LL_RTC_ClearFlag_TSOV

LL_RTC_ClearFlag_TS

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_TS (RTC_TypeDef * RTCx)

Function description

Clear Time-stamp flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR TSF LL_RTC_ClearFlag_TS

LL_RTC_ClearFlag_WUT

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_WUT (RTC_TypeDef * RTCx)

Function description

Clear Wakeup timer flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR WUTF LL_RTC_ClearFlag_WUT

LL_RTC_ClearFlag_ALRB

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ALRB (RTC_TypeDef * RTCx)

Function description

Clear Alarm B flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR ALRBF LL_RTC_ClearFlag_ALRB

LL_RTC_ClearFlag_ALRA

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_ALRA (RTC_TypeDef * RTCx)

Function description

Clear Alarm A flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR ALRAF LL_RTC_ClearFlag_ALRA

LL_RTC_IsActiveFlag_INIT

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_INIT (RTC_TypeDef * RTCx)

Function description

Get Initialization flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR INITF LL_RTC_IsActiveFlag_INIT

LL_RTC_IsActiveFlag_RS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_RS (RTC_TypeDef * RTCx)

Function description

Get Registers synchronization flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RSF LL_RTC_IsActiveFlag_RS

LL_RTC_ClearFlag_RS

Function name

__STATIC_INLINE void LL_RTC_ClearFlag_RS (RTC_TypeDef * RTCx)

Function description

Clear Registers synchronization flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR RSF LL_RTC_ClearFlag_RS

LL_RTC_IsActiveFlag_INITS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_INITS (RTC_TypeDef * RTCx)

Function description

Get Initialization status flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR INITS LL_RTC_IsActiveFlag_INITS

LL_RTC_IsActiveFlag_SHP

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_SHP (RTC_TypeDef * RTCx)

Function description

Get Shift operation pending flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SHPF LL_RTC_IsActiveFlag_SHP

LL_RTC_IsActiveFlag_WUTW

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_WUTW (RTC_TypeDef * RTCx)

Function description

Get Wakeup timer write flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR WUTWF LL_RTC_IsActiveFlag_WUTW

LL_RTC_IsActiveFlag_ALRBW

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRBW (RTC_TypeDef * RTCx)

Function description

Get Alarm B write flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ALRBWF LL_RTC_IsActiveFlag_ALRBW

LL_RTC_IsActiveFlag_ALRAW

Function name

__STATIC_INLINE uint32_t LL_RTC_IsActiveFlag_ALRAW (RTC_TypeDef * RTCx)

Function description

Get Alarm A write flag.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ALRAWF LL_RTC_IsActiveFlag_ALRAW

LL_RTC_EnableIT_TS

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TS (RTC_TypeDef * RTCx)

Function description

Enable Time-stamp interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSIE LL_RTC_EnableIT_TS

LL_RTC_DisableIT_TS

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TS (RTC_TypeDef * RTCx)

Function description

Disable Time-stamp interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR TSIE LL_RTC_DisableIT_TS

LL_RTC_EnableIT_WUT

Function name

__STATIC_INLINE void LL_RTC_EnableIT_WUT (RTC_TypeDef * RTCx)

Function description

Enable Wakeup timer interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTIE LL_RTC_EnableIT_WUT

LL_RTC_DisableIT_WUT

Function name

__STATIC_INLINE void LL_RTC_DisableIT_WUT (RTC_TypeDef * RTCx)

Function description

Disable Wakeup timer interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR WUTIE LL_RTC_DisableIT_WUT

LL_RTC_EnableIT_ALRB

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ALRB (RTC_TypeDef * RTCx)

Function description

Enable Alarm B interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRBIE LL_RTC_EnableIT_ALRB

LL_RTC_DisableIT_ALRB

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ALRB (RTC_TypeDef * RTCx)

Function description

Disable Alarm B interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRBIE LL_RTC_DisableIT_ALRB

LL_RTC_EnableIT_ALRA

Function name

__STATIC_INLINE void LL_RTC_EnableIT_ALRA (RTC_TypeDef * RTCx)

Function description

Enable Alarm A interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAIE LL_RTC_EnableIT_ALRA

LL_RTC_DisableIT_ALRA

Function name

__STATIC_INLINE void LL_RTC_DisableIT_ALRA (RTC_TypeDef * RTCx)

Function description

Disable Alarm A interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Notes

- Bit is write-protected. LL_RTC_DisableWriteProtection function should be called before.

Reference Manual to LL API cross reference:

- RTC_CR ALRAIE LL_RTC_DisableIT_ALRA

LL_RTC_EnableIT_TAMP3

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP3 (RTC_TypeDef * RTCx)

Function description

Enable Tamper 3 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP3IE LL_RTC_EnableIT_TAMP3

LL_RTC_DisableIT_TAMP3

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP3 (RTC_TypeDef * RTCx)

Function description

Disable Tamper 3 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP3IE LL_RTC_DisableIT_TAMP3

LL_RTC_EnableIT_TAMP2

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP2 (RTC_TypeDef * RTCx)

Function description

Enable Tamper 2 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP2IE LL_RTC_EnableIT_TAMP2

LL_RTC_DisableIT_TAMP2

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP2 (RTC_TypeDef * RTCx)

Function description

Disable Tamper 2 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP2IE LL_RTC_DisableIT_TAMP2

LL_RTC_EnableIT_TAMP1

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP1 (RTC_TypeDef * RTCx)

Function description

Enable Tamper 1 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP1IE LL_RTC_EnableIT_TAMP1

LL_RTC_DisableIT_TAMP1

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP1 (RTC_TypeDef * RTCx)

Function description

Disable Tamper 1 interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMP1IE LL_RTC_DisableIT_TAMP1

LL_RTC_EnableIT_TAMP

Function name

__STATIC_INLINE void LL_RTC_EnableIT_TAMP (RTC_TypeDef * RTCx)

Function description

Enable all Tamper Interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMPIE LL_RTC_EnableIT_TAMP

LL_RTC_DisableIT_TAMP

Function name

__STATIC_INLINE void LL_RTC_DisableIT_TAMP (RTC_TypeDef * RTCx)

Function description

Disable all Tamper Interrupt.

Parameters

- **RTCx:** RTC Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- TAMPCR TAMPIE LL_RTC_DisableIT_TAMP

LL_RTC_IsEnabledIT_TS

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TS (RTC_TypeDef * RTCx)

Function description

Check if Time-stamp interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR TSIE LL_RTC_IsEnabledIT_TS

LL_RTC_IsEnabledIT_WUT

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_WUT (RTC_TypeDef * RTCx)

Function description

Check if Wakeup timer interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR WUTIE LL_RTC_IsEnabledIT_WUT

LL_RTC_IsEnabledIT_ALRB

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ALRB (RTC_TypeDef * RTCx)

Function description

Check if Alarm B interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ALRBIE LL_RTC_IsEnabledIT_ALRB

LL_RTC_IsEnabledIT_ALRA

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_ALRA (RTC_TypeDef * RTCx)

Function description

Check if Alarm A interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR ALRAIE LL_RTC_IsEnabledIT_ALRA

LL_RTC_IsEnabledIT_TAMP3

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP3 (RTC_TypeDef * RTCx)

Function description

Check if Tamper 3 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMPCR TAMP3IE LL_RTC_IsEnabledIT_TAMP3

LL_RTC_IsEnabledIT_TAMP2

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP2 (RTC_TypeDef * RTCx)

Function description

Check if Tamper 2 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMPCR TAMP2IE LL_RTC_IsEnabledIT_TAMP2

LL_RTC_IsEnabledIT_TAMP1

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP1 (RTC_TypeDef * RTCx)

Function description

Check if Tamper 1 interrupt is enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMPCR TAMP1IE LL_RTC_IsEnabledIT_TAMP1

LL_RTC_IsEnabledIT_TAMP

Function name

__STATIC_INLINE uint32_t LL_RTC_IsEnabledIT_TAMP (RTC_TypeDef * RTCx)

Function description

Check if all the TAMPER interrupts are enabled or not.

Parameters

- **RTCx:** RTC Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- TAMPCR TAMPIE LL_RTC_IsEnabledIT_TAMP

LL_RTC_DeInit

Function name

ErrorStatus LL_RTC_DeInit (RTC_TypeDef * RTCx)

Function description

De-Initializes the RTC registers to their default reset values.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC registers are de-initialized
  - ERROR: RTC registers are not de-initialized

Notes

- This function does not reset the RTC Clock source and RTC Backup Data registers.

LL_RTC_Init

Function name

ErrorStatus LL_RTC_Init (RTC_TypeDef * RTCx, LL_RTC_InitTypeDef * RTC_InitStruct)

Function description

Initializes the RTC registers according to the specified parameters in RTC_InitStruct.

Parameters

- **RTCx:** RTC Instance
- **RTC_InitStruct:** pointer to a LL_RTC_InitTypeDef structure that contains the configuration information for the RTC peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC registers are initialized
  - ERROR: RTC registers are not initialized

Notes

- The RTC Prescaler register is write protected and can be written in initialization mode only.

LL_RTC_StructInit

Function name

void LL_RTC_StructInit (LL_RTC_InitTypeDef * RTC_InitStruct)

Function description

Set each LL_RTC_InitTypeDef field to default value.

Parameters

- **RTC_InitStruct:** pointer to a LL_RTC_InitTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_TIME_Init

Function name

ErrorStatus LL_RTC_TIME_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_TimeTypeDef * RTC_TimeStruct)

Function description

Set the RTC current time.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_TimeStruct:** pointer to a RTC_TimeTypeDef structure that contains the time configuration information for the RTC.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC Time register is configured
  - ERROR: RTC Time register is not configured

LL_RTC_TIME_StructInit

Function name

void LL_RTC_TIME_StructInit (LL_RTC_TimeTypeDef * RTC_TimeStruct)

Function description

Set each LL_RTC_TimeTypeDef field to default value (Time = 00h:00min:00sec).

Parameters

- **RTC_TimeStruct:** pointer to a LL_RTC_TimeTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_DATE_Init

Function name

ErrorStatus LL_RTC_DATE_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_DateTypeDef * RTC_DateStruct)

Function description

Set the RTC current date.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_DateStruct:** pointer to a RTC_DateTypeDef structure that contains the date configuration information for the RTC.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC Day register is configured
  - ERROR: RTC Day register is not configured

LL_RTC_DATE_StructInit

Function name

void LL_RTC_DATE_StructInit (LL_RTC_DateTypeDef * RTC_DateStruct)

Function description

Set each LL_RTC_DateTypeDef field to default value (date = Monday, January 01 xx00)

Parameters

- **RTC_DateStruct:** pointer to a LL_RTC_DateTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_ALMA_Init

Function name

ErrorStatus LL_RTC_ALMA_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set the RTC Alarm A.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure that contains the alarm configuration parameters.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ALARMA registers are configured
  - ERROR: ALARMA registers are not configured

Notes

- The Alarm register can only be written when the corresponding Alarm is disabled (Use LL_RTC_ALMA_Disable function).

LL_RTC_ALMB_Init

Function name

ErrorStatus LL_RTC_ALMB_Init (RTC_TypeDef * RTCx, uint32_t RTC_Format, LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set the RTC Alarm B.

Parameters

- **RTCx:** RTC Instance
- **RTC_Format:** This parameter can be one of the following values:
  - LL_RTC_FORMAT_BIN
  - LL_RTC_FORMAT_BCD
- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure that contains the alarm configuration parameters.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: ALARMB registers are configured
  - ERROR: ALARMB registers are not configured

Notes

- The Alarm register can only be written when the corresponding Alarm is disabled (LL_RTC_ALMB_Disable function).

LL_RTC_ALMA_StructInit

Function name

void LL_RTC_ALMA_StructInit (LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set each LL_RTC_AlarmTypeDef of ALARMA field to default value (Time = 00h:00mn:00sec / Day = 1st day of the month/Mask = all fields are masked).

Parameters

- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_ALMB_StructInit

Function name

void LL_RTC_ALMB_StructInit (LL_RTC_AlarmTypeDef * RTC_AlarmStruct)

Function description

Set each LL_RTC_AlarmTypeDef of ALARMA field to default value (Time = 00h:00mn:00sec / Day = 1st day of the month/Mask = all fields are masked).

Parameters

- **RTC_AlarmStruct:** pointer to a LL_RTC_AlarmTypeDef structure which will be initialized.

Return values

- **None:**

LL_RTC_EnterInitMode

Function name

ErrorStatus LL_RTC_EnterInitMode (RTC_TypeDef * RTCx)

Function description

Enters the RTC Initialization mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC is in Init mode
  - ERROR: RTC is not in Init mode

Notes

- The RTC Initialization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.

LL_RTC_ExitInitMode

Function name

ErrorStatus LL_RTC_ExitInitMode (RTC_TypeDef * RTCx)

Function description

Exit the RTC Initialization mode.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC exited from in Init mode
  - ERROR: Not applicable

Notes

- When the initialization sequence is complete, the calendar restarts counting after 4 RTCCLK cycles.
- The RTC Initialization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.

LL_RTC_WaitForSynchro

Function name

ErrorStatus LL_RTC_WaitForSynchro (RTC_TypeDef * RTCx)

Function description

Waits until the RTC Time and Day registers (RTC_TR and RTC_DR) are synchronized with RTC APB clock.

Parameters

- **RTCx:** RTC Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: RTC registers are synchronised
  - ERROR: RTC registers are not synchronised

Notes

- The RTC Resynchronization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.
- To read the calendar through the shadow registers after Calendar initialization, calendar update or after wakeup from low power modes the software must first clear the RSF flag. The software must then wait until it is set again before reading the calendar, which means that the calendar registers have been correctly copied into the RTC_TR and RTC_DR shadow registers.

122.3 RTC Firmware driver defines

The following section lists the various define and macros of the module.

122.3.1 RTC

RTC

ALARM OUTPUT

LL_RTC_ALARMOUT_DISABLE

Output disabled

LL_RTC_ALARMOUT_ALMA

Alarm A output enabled

LL_RTC_ALARMOUT_ALMB

Alarm B output enabled

LL_RTC_ALARMOUT_WAKEUP

Wakeup output enabled

ALARM OUTPUT TYPE

LL_RTC_ALARM_OUTPUTTYPE_OPENDRAIN

RTC_ALARM, when mapped on PC13, is open-drain output

LL_RTC_ALARM_OUTPUTTYPE_PUSHPULL

RTC_ALARM, when mapped on PC13, is push-pull output

ALARMA MASK

LL_RTC_ALMA_MASK_NONE

No masks applied on Alarm A

LL_RTC_ALMA_MASK_DATEWEEKDAY

Date/day do not care in Alarm A comparison

LL_RTC_ALMA_MASK_HOURS

Hours do not care in Alarm A comparison

LL_RTC_ALMA_MASK_MINUTES

Minutes do not care in Alarm A comparison

LL_RTC_ALMA_MASK_SECONDS

Seconds do not care in Alarm A comparison

LL_RTC_ALMA_MASK_ALL

Masks all

ALARMA TIME FORMAT

LL_RTC_ALMA_TIME_FORMAT_AM

AM or 24-hour format

LL_RTC_ALMA_TIME_FORMAT_PM

PM

RTC Alarm A Date WeekDay

LL_RTC_ALMA_DATEWEEKDAYSEL_DATE

Alarm A Date is selected

LL_RTC_ALMA_DATEWEEKDAYSEL_WEEKDAY

Alarm A WeekDay is selected

ALARMB MASK

LL_RTC_ALMB_MASK_NONE

No masks applied on Alarm B

LL_RTC_ALMB_MASK_DATEWEEKDAY

Date/day do not care in Alarm B comparison

LL_RTC_ALMB_MASK_HOURS

Hours do not care in Alarm B comparison

LL_RTC_ALMB_MASK_MINUTES

Minutes do not care in Alarm B comparison

LL_RTC_ALMB_MASK_SECONDS

Seconds do not care in Alarm B comparison

LL_RTC_ALMB_MASK_ALL

Masks all

ALARMB TIME FORMAT

LL_RTC_ALMB_TIME_FORMAT_AM

AM or 24-hour format

LL_RTC_ALMB_TIME_FORMAT_PM

PM

RTC Alarm B Date WeekDay

Calibration pulse insertion

LL_RTC_CALIB_INSERTPULSE_NONE

No RTCCLK pulses are added

LL_RTC_CALIB_INSERTPULSE_SET

One RTCCLK pulse is effectively inserted every 2exp11 pulses (frequency increased by 488.5 ppm)

Calibration output

LL_RTC_CALIB_OUTPUT_NONE

Calibration output disabled

LL_RTC_CALIB_OUTPUT_1HZ

Calibration output is 1 Hz

LL_RTC_CALIB_OUTPUT_512HZ

Calibration output is 512 Hz

Calibration period

LL_RTC_CALIB_PERIOD_32SEC

Use a 32-second calibration cycle period

LL_RTC_CALIB_PERIOD_16SEC

Use a 16-second calibration cycle period

LL_RTC_CALIB_PERIOD_8SEC

Use a 8-second calibration cycle period

RTC_TAMP1 input detection

LL_RTC_TAMPER_2

RTC_TAMP2 input detection

LL_RTC_TAMPER_3

RTC_TAMP3 input detection

TAMPER ACTIVE LEVEL

LL_RTC_TAMPER_ACTIVELEVEL_TAMP1

RTC_TAMP1 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP2

RTC_TAMP2 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

LL_RTC_TAMPER_ACTIVELEVEL_TAMP3

RTC_TAMP3 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event

TAMPER DURATION

LL_RTC_TAMPER_DURATION_1RTCCLK

Tamper pins are pre-charged before sampling during 1 RTCCLK cycle

LL_RTC_TAMPER_DURATION_2RTCCLK

Tamper pins are pre-charged before sampling during 2 RTCCLK cycles

LL_RTC_TAMPER_DURATION_4RTCCLK

Tamper pins are pre-charged before sampling during 4 RTCCLK cycles

LL_RTC_TAMPER_DURATION_8RTCCLK

Tamper pins are pre-charged before sampling during 8 RTCCLK cycles

TAMPER FILTER

LL_RTC_TAMPER_FILTER_DISABLE

Tamper filter is disabled

LL_RTC_TAMPER_FILTER_2SAMPLE

Tamper is activated after 2 consecutive samples at the active level

LL_RTC_TAMPER_FILTER_4SAMPLE

Tamper is activated after 4 consecutive samples at the active level

LL_RTC_TAMPER_FILTER_8SAMPLE

Tamper is activated after 8 consecutive samples at the active level.

TAMPER MASK

LL_RTC_TAMPER_MASK_TAMPER1

Tamper 1 event generates a trigger event. TAMP1F is masked and internally cleared by hardware.The backup registers are not erased

LL_RTC_TAMPER_MASK_TAMPER2

Tamper 2 event generates a trigger event. TAMP2F is masked and internally cleared by hardware. The backup registers are not erased.

LL_RTC_TAMPER_MASK_TAMPER3

Tamper 3 event generates a trigger event. TAMP3F is masked and internally cleared by hardware. The backup registers are not erased

TAMPER NO ERASE

LL_RTC_TAMPER_NOERASE_TAMPER1

Tamper 1 event does not erase the backup registers.

LL_RTC_TAMPER_NOERASE_TAMPER2

Tamper 2 event does not erase the backup registers.

LL_RTC_TAMPER_NOERASE_TAMPER3

Tamper 3 event does not erase the backup registers.

TAMPER SAMPLING FREQUENCY DIVIDER

LL_RTC_TAMPER_SAMPLFREQDIV_32768

Each of the tamper inputs are sampled with a frequency = RTCCLK / 32768

LL_RTC_TAMPER_SAMPLFREQDIV_16384

Each of the tamper inputs are sampled with a frequency = RTCCLK / 16384

LL_RTC_TAMPER_SAMPLFREQDIV_8192

Each of the tamper inputs are sampled with a frequency = RTCCLK / 8192

LL_RTC_TAMPER_SAMPLFREQDIV_4096

Each of the tamper inputs are sampled with a frequency = RTCCLK / 4096

LL_RTC_TAMPER_SAMPLFREQDIV_2048

Each of the tamper inputs are sampled with a frequency = RTCCLK / 2048

LL_RTC_TAMPER_SAMPLFREQDIV_1024

Each of the tamper inputs are sampled with a frequency = RTCCLK / 1024

LL_RTC_TAMPER_SAMPLFREQDIV_512

Each of the tamper inputs are sampled with a frequency = RTCCLK / 512

LL_RTC_TAMPER_SAMPLFREQDIV_256

Each of the tamper inputs are sampled with a frequency = RTCCLK / 256

TIMESTAMP EDGE

LL_RTC_TIMESTAMP_EDGE_RISING

RTC_TS input rising edge generates a time-stamp event

LL_RTC_TIMESTAMP_EDGE_FALLING

RTC_TS input falling edge generates a time-stamp even

TIME FORMAT

LL_RTC_TIME_FORMAT_AM_OR_24

AM or 24-hour format

LL_RTC_TIME_FORMAT_PM

PM

TIMESTAMP TIME FORMAT

LL_RTC_TS_TIME_FORMAT_AM

AM or 24-hour format

LL_RTC_TS_TIME_FORMAT_PM

PM

WAKEUP CLOCK DIV

LL_RTC_WAKEUPCLOCK_DIV_16

RTC/16 clock is selected

LL_RTC_WAKEUPCLOCK_DIV_8

RTC/8 clock is selected

LL_RTC_WAKEUPCLOCK_DIV_4

RTC/4 clock is selected

LL_RTC_WAKEUPCLOCK_DIV_2

RTC/2 clock is selected

LL_RTC_WAKEUPCLOCK_CKSPRE

ck_spre (usually 1 Hz) clock is selected

LL_RTC_WAKEUPCLOCK_CKSPRE_WUT

ck_spre (usually 1 Hz) clock is selected and 2exp16 is added to the WUT counter value

WEEK DAY

LL_RTC_WEEKDAY_MONDAY

Monday

LL_RTC_WEEKDAY_TUESDAY

Tuesday

LL_RTC_WEEKDAY_WEDNESDAY

Wednesday

LL_RTC_WEEKDAY_THURSDAY

Thrusday

LL_RTC_WEEKDAY_FRIDAY

Friday

LL_RTC_WEEKDAY_SATURDAY

Saturday

LL_RTC_WEEKDAY_SUNDAY

Sunday

Convert helper Macros

__LL_RTC_CONVERT_BIN2BCD

Description:

- Helper macro to convert a value from 2 digit decimal format to BCD format.

Parameters:

- __VALUE__: Byte to be converted

Return value:

- Converted: byte

__LL_RTC_CONVERT_BCD2BIN

Description:

- Helper macro to convert a value from BCD format to 2 digit decimal format.

Parameters:

- __VALUE__: BCD value to be converted

Return value:

- Converted: byte

Date helper Macros

__LL_RTC_GET_WEEKDAY

Description:

- Helper macro to retrieve weekday.

Parameters:

- __RTC_DATE__: Date returned by

Return value:

- Returned: value can be one of the following values:
  - LL_RTC_WEEKDAY_MONDAY
  - LL_RTC_WEEKDAY_TUESDAY
  - LL_RTC_WEEKDAY_WEDNESDAY
  - LL_RTC_WEEKDAY_THURSDAY
  - LL_RTC_WEEKDAY_FRIDAY
  - LL_RTC_WEEKDAY_SATURDAY
  - LL_RTC_WEEKDAY_SUNDAY

__LL_RTC_GET_YEAR

Description:

- Helper macro to retrieve Year in BCD format.

Parameters:

- __RTC_DATE__: Value returned by

Return value:

- Year: in BCD format (0x00 . . . 0x99)

__LL_RTC_GET_MONTH

Description:

- Helper macro to retrieve Month in BCD format.

Parameters:

- __RTC_DATE__: Value returned by

Return value:

- Returned: value can be one of the following values:
  - LL_RTC_MONTH_JANUARY
  - LL_RTC_MONTH_FEBRUARY
  - LL_RTC_MONTH_MARCH
  - LL_RTC_MONTH_APRIL
  - LL_RTC_MONTH_MAY
  - LL_RTC_MONTH_JUNE
  - LL_RTC_MONTH_JULY
  - LL_RTC_MONTH_AUGUST
  - LL_RTC_MONTH_SEPTEMBER
  - LL_RTC_MONTH_OCTOBER
  - LL_RTC_MONTH_NOVEMBER
  - LL_RTC_MONTH_DECEMBER

__LL_RTC_GET_DAY

Description:

- Helper macro to retrieve Day in BCD format.

Parameters:

- __RTC_DATE__: Value returned by

Return value:

- Day: in BCD format (0x01 . . . 0x31)

Time helper Macros

__LL_RTC_GET_HOUR

Description:

- Helper macro to retrieve hour in BCD format.

Parameters:

- __RTC_TIME__: RTC time returned by

Return value:

- Hours: in BCD format (0x01. . .0x12 or between Min_Data=0x00 and Max_Data=0x23)

__LL_RTC_GET_MINUTE

Description:

- Helper macro to retrieve minute in BCD format.

Parameters:

- __RTC_TIME__: RTC time returned by

Return value:

- Minutes: in BCD format (0x00. . .0x59)

__LL_RTC_GET_SECOND

Description:

- Helper macro to retrieve second in BCD format.

Parameters:

- __RTC_TIME__: RTC time returned by

Return value:

- Seconds: in format (0x00. . .0x59)

Common Write and read registers Macros

LL_RTC_WriteReg

Description:

- Write a value in RTC register.

Parameters:

- __INSTANCE__: RTC Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_RTC_ReadReg

Description:

- Read a value in RTC register.

Parameters:

- __INSTANCE__: RTC Instance
- __REG__: Register to be read

Return value:

- Register: value

123 LL SPI Generic Driver

123.1 SPI Firmware driver registers structures

123.1.1 LL_SPI_InitTypeDef

LL_SPI_InitTypeDef is defined in the stm32h7xx_ll_spi.h

Data Fields

- ***uint32_t TransferDirection***
- ***uint32_t Mode***
- ***uint32_t DataWidth***
- ***uint32_t ClockPolarity***
- ***uint32_t ClockPhase***
- ***uint32_t NSS***
- ***uint32_t BaudRate***
- ***uint32_t BitOrder***
- ***uint32_t CRCCalculation***
- ***uint32_t CRCPoly***

Field Documentation

- ***uint32_t LL_SPI_InitTypeDef::TransferDirection***

  Specifies the SPI unidirectional or bidirectional data mode. This parameter can be a value of ***SPI_LL_EC_TRANSFER_MODE***.This feature can be modified afterwards using unitary function **LL_SPI_SetTransferDirection()**.
- ***uint32_t LL_SPI_InitTypeDef::Mode***

  Specifies the SPI mode (Master/Slave). This parameter can be a value of ***SPI_LL_EC_MODE***.This feature can be modified afterwards using unitary function **LL_SPI_SetMode()**.
- ***uint32_t LL_SPI_InitTypeDef::DataWidth***

  Specifies the SPI data width. This parameter can be a value of ***SPI_LL_EC_DATAWIDTH***.This feature can be modified afterwards using unitary function **LL_SPI_SetDataWidth()**.
- ***uint32_t LL_SPI_InitTypeDef::ClockPolarity***

  Specifies the serial clock steady state. This parameter can be a value of ***SPI_LL_EC_POLARITY***.This feature can be modified afterwards using unitary function **LL_SPI_SetClockPolarity()**.
- ***uint32_t LL_SPI_InitTypeDef::ClockPhase***

  Specifies the clock active edge for the bit capture. This parameter can be a value of ***SPI_LL_EC_PHASE***.This feature can be modified afterwards using unitary function **LL_SPI_SetClockPhase()**.
- ***uint32_t LL_SPI_InitTypeDef::NSS***

  Specifies whether the NSS signal is managed by hardware (NSS pin) or by software using the SSI bit.This parameter can be a value of ***SPI_LL_EC_NSS_MODE***.This feature can be modified afterwards using unitary function **LL_SPI_SetNSSMode()**.
- ***uint32_t LL_SPI_InitTypeDef::BaudRate***

  Specifies the BaudRate prescaler value which will be used to configure the transmit and receive SCK clock. This parameter can be a value of ***SPI_LL_EC_BAUDRATEPRESCALER***.

  Note:

  – The communication clock is derived from the master clock. The slave clock does not need to be set.

  This feature can be modified afterwards using unitary function **LL_SPI_SetBaudRatePrescaler()**.

- ***uint32_t LL_SPI_InitTypeDef::BitOrder***

  Specifies whether data transfers start from MSB or LSB bit. This parameter can be a value of ***SPI_LL_EC_BIT_ORDER***.This feature can be modified afterwards using unitary function **LL_SPI_SetTransferBitOrder()**.
- ***uint32_t LL_SPI_InitTypeDef::CRCCalculation***

  Specifies if the CRC calculation is enabled or not. This parameter can be a value of ***SPI_LL_EC_CRC_CALCULATION***.This feature can be modified afterwards using unitary functions **LL_SPI_EnableCRC()** and **LL_SPI_DisableCRC()**.
- ***uint32_t LL_SPI_InitTypeDef::CRCPoly***

  Specifies the polynomial used for the CRC calculation. This parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFFFFFFFF.This feature can be modified afterwards using unitary function **LL_SPI_SetCRCPolynomial()**.

123.1.2 LL_I2S_InitTypeDef

LL_I2S_InitTypeDef is defined in the stm32h7xx_ll_spi.h

Data Fields

- ***uint32_t Mode***
- ***uint32_t Standard***
- ***uint32_t DataFormat***
- ***uint32_t MCLKOutput***
- ***uint32_t AudioFreq***
- ***uint32_t ClockPolarity***

Field Documentation

- ***uint32_t LL_I2S_InitTypeDef::Mode***

  Specifies the I2S operating mode. This parameter can be a value of ***I2S_LL_EC_MODE***This feature can be modified afterwards using unitary function **LL_I2S_SetTransferMode()**.
- ***uint32_t LL_I2S_InitTypeDef::Standard***

  Specifies the standard used for the I2S communication. This parameter can be a value of ***I2S_LL_EC_STANDARD***This feature can be modified afterwards using unitary function **LL_I2S_SetStandard()**.
- ***uint32_t LL_I2S_InitTypeDef::DataFormat***

  Specifies the data format for the I2S communication. This parameter can be a value of ***I2S_LL_EC_DATA_FORMAT***This feature can be modified afterwards using unitary function **LL_I2S_SetDataFormat()**.
- ***uint32_t LL_I2S_InitTypeDef::MCLKOutput***

  Specifies whether the I2S MCLK output is enabled or not. This parameter can be a value of ***I2S_LL_EC_MCLK_OUTPUT***This feature can be modified afterwards using unitary functions **LL_I2S_EnableMasterClock()** or **LL_I2S_DisableMasterClock**.
- ***uint32_t LL_I2S_InitTypeDef::AudioFreq***

  Specifies the frequency selected for the I2S communication. This parameter can be a value of ***I2S_LL_EC_AUDIO_FREQ***Audio Frequency can be modified afterwards using Reference manual formulas to calculate Prescaler Linear, Parity and unitary functions **LL_I2S_SetPrescalerLinear()** and **LL_I2S_SetPrescalerParity()** to set it.
- ***uint32_t LL_I2S_InitTypeDef::ClockPolarity***

  Specifies the idle state of the I2S clock. This parameter can be a value of ***I2S_LL_EC_POLARITY***This feature can be modified afterwards using unitary function **LL_I2S_SetClockPolarity()**.

123.2 SPI Firmware driver API description

The following section lists the various functions of the SPI library.

123.2.1 Detailed description of functions

LL_SPI_Enable

Function name

__STATIC_INLINE void LL_SPI_Enable (SPI_TypeDef * SPIx)

Function description

Enable SPI peripheral.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SPE LL_SPI_Enable

LL_SPI_Disable

Function name

__STATIC_INLINE void LL_SPI_Disable (SPI_TypeDef * SPIx)

Function description

Disable SPI peripheral.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- When disabling the SPI, follow the procedure described in the Reference Manual.

Reference Manual to LL API cross reference:

- CR1 SPE LL_SPI_Disable

LL_SPI_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabled (SPI_TypeDef * SPIx)

Function description

Check if SPI peripheral is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 SPE LL_SPI_IsEnabled

LL_SPI_EnableIOSwap

Function name

__STATIC_INLINE void LL_SPI_EnableIOSwap (SPI_TypeDef * SPIx)

Function description

Swap the MOSI and MISO pin.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_SPI_EnableIOSwap

LL_SPI_DisableIOSwap

Function name

__STATIC_INLINE void LL_SPI_DisableIOSwap (SPI_TypeDef * SPIx)

Function description

Restore default function for MOSI and MISO pin.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_SPI_DisableIOSwap

LL_SPI_IsEnabledIOSwap

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIOSwap (SPI_TypeDef * SPIx)

Function description

Check if MOSI and MISO pin are swapped.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_SPI_IsEnabledIOSwap

LL_SPI_EnableGPIOControl

Function name

__STATIC_INLINE void LL_SPI_EnableGPIOControl (SPI_TypeDef * SPIx)

Function description

Enable GPIO control.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_SPI_EnableGPIOControl

LL_SPI_DisableGPIOControl

Function name

__STATIC_INLINE void LL_SPI_DisableGPIOControl (SPI_TypeDef * SPIx)

Function description

Disable GPIO control.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_SPI_DisableGPIOControl

LL_SPI_IsEnabledGPIOControl

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledGPIOControl (SPI_TypeDef * SPIx)

Function description

Check if GPIO control is active.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_SPI_IsEnabledGPIOControl

LL_SPI_SetMode

Function name

__STATIC_INLINE void LL_SPI_SetMode (SPI_TypeDef * SPIx, uint32_t Mode)

Function description

Set SPI Mode to Master or Slave.

Parameters

- **SPIx:** SPI Instance
- **Mode:** This parameter can be one of the following values:
  - LL_SPI_MODE_MASTER
  - LL_SPI_MODE_SLAVE

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 MASTER LL_SPI_SetMode

LL_SPI_GetMode

Function name

__STATIC_INLINE uint32_t LL_SPI_GetMode (SPI_TypeDef * SPIx)

Function description

Get SPI Mode (Master or Slave)

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_MODE_MASTER
  - LL_SPI_MODE_SLAVE

Reference Manual to LL API cross reference:

- CFG2 MASTER LL_SPI_GetMode

LL_SPI_SetMasterSSIdleness

Function name

__STATIC_INLINE void LL_SPI_SetMasterSSIdleness (SPI_TypeDef * SPIx, uint32_t MasterSSIdleness)

Function description

Configure the Idleness applied by master between active edge of SS and first send data.

Parameters

- **SPIx:** SPI Instance
- **MasterSSIdleness:** This parameter can be one of the following values:
  - LL_SPI_SS_IDLENESS_00CYCLE
  - LL_SPI_SS_IDLENESS_01CYCLE
  - LL_SPI_SS_IDLENESS_02CYCLE
  - LL_SPI_SS_IDLENESS_03CYCLE
  - LL_SPI_SS_IDLENESS_04CYCLE
  - LL_SPI_SS_IDLENESS_05CYCLE
  - LL_SPI_SS_IDLENESS_06CYCLE
  - LL_SPI_SS_IDLENESS_07CYCLE
  - LL_SPI_SS_IDLENESS_08CYCLE
  - LL_SPI_SS_IDLENESS_09CYCLE
  - LL_SPI_SS_IDLENESS_10CYCLE
  - LL_SPI_SS_IDLENESS_11CYCLE
  - LL_SPI_SS_IDLENESS_12CYCLE
  - LL_SPI_SS_IDLENESS_13CYCLE
  - LL_SPI_SS_IDLENESS_14CYCLE
  - LL_SPI_SS_IDLENESS_15CYCLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 MSSI LL_SPI_SetMasterSSIdleness

LL_SPI_GetMasterSSIdleness

Function name

__STATIC_INLINE uint32_t LL_SPI_GetMasterSSIdleness (SPI_TypeDef * SPIx)

Function description

Get the configured Idleness applied by master.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_SS_IDLENESS_00CYCLE
  - LL_SPI_SS_IDLENESS_01CYCLE
  - LL_SPI_SS_IDLENESS_02CYCLE
  - LL_SPI_SS_IDLENESS_03CYCLE
  - LL_SPI_SS_IDLENESS_04CYCLE
  - LL_SPI_SS_IDLENESS_05CYCLE
  - LL_SPI_SS_IDLENESS_06CYCLE
  - LL_SPI_SS_IDLENESS_07CYCLE
  - LL_SPI_SS_IDLENESS_08CYCLE
  - LL_SPI_SS_IDLENESS_09CYCLE
  - LL_SPI_SS_IDLENESS_10CYCLE
  - LL_SPI_SS_IDLENESS_11CYCLE
  - LL_SPI_SS_IDLENESS_12CYCLE
  - LL_SPI_SS_IDLENESS_13CYCLE
  - LL_SPI_SS_IDLENESS_14CYCLE
  - LL_SPI_SS_IDLENESS_15CYCLE

Reference Manual to LL API cross reference:

- CFG2 MSSI LL_SPI_GetMasterSSIdleness

LL_SPI_SetInterDataIdleness

Function name

__STATIC_INLINE void LL_SPI_SetInterDataIdleness (SPI_TypeDef * SPIx, uint32_t MasterInterDataIdleness)

Function description

Configure the idleness applied by master between data frame.

Parameters

- **SPIx:** SPI Instance
- **MasterInterDataIdleness:** This parameter can be one of the following values:
  - LL_SPI_ID_IDLENESS_00CYCLE
  - LL_SPI_ID_IDLENESS_01CYCLE
  - LL_SPI_ID_IDLENESS_02CYCLE
  - LL_SPI_ID_IDLENESS_03CYCLE
  - LL_SPI_ID_IDLENESS_04CYCLE
  - LL_SPI_ID_IDLENESS_05CYCLE
  - LL_SPI_ID_IDLENESS_06CYCLE
  - LL_SPI_ID_IDLENESS_07CYCLE
  - LL_SPI_ID_IDLENESS_08CYCLE
  - LL_SPI_ID_IDLENESS_09CYCLE
  - LL_SPI_ID_IDLENESS_10CYCLE
  - LL_SPI_ID_IDLENESS_11CYCLE
  - LL_SPI_ID_IDLENESS_12CYCLE
  - LL_SPI_ID_IDLENESS_13CYCLE
  - LL_SPI_ID_IDLENESS_14CYCLE
  - LL_SPI_ID_IDLENESS_15CYCLE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG2 MIDI LL_SPI_SetInterDataIdleness

LL_SPI_GetInterDataIdleness

Function name

__STATIC_INLINE uint32_t LL_SPI_GetInterDataIdleness (SPI_TypeDef * SPIx)

Function description

Get the configured inter data idleness.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_ID_IDLENESS_00CYCLE
  - LL_SPI_ID_IDLENESS_01CYCLE
  - LL_SPI_ID_IDLENESS_02CYCLE
  - LL_SPI_ID_IDLENESS_03CYCLE
  - LL_SPI_ID_IDLENESS_04CYCLE
  - LL_SPI_ID_IDLENESS_05CYCLE
  - LL_SPI_ID_IDLENESS_06CYCLE
  - LL_SPI_ID_IDLENESS_07CYCLE
  - LL_SPI_ID_IDLENESS_08CYCLE
  - LL_SPI_ID_IDLENESS_09CYCLE
  - LL_SPI_ID_IDLENESS_10CYCLE
  - LL_SPI_ID_IDLENESS_11CYCLE
  - LL_SPI_ID_IDLENESS_12CYCLE
  - LL_SPI_ID_IDLENESS_13CYCLE
  - LL_SPI_ID_IDLENESS_14CYCLE
  - LL_SPI_ID_IDLENESS_15CYCLE

Reference Manual to LL API cross reference:

- CFG2 MIDI LL_SPI_SetInterDataIdleness

LL_SPI_SetTransferSize

Function name

__STATIC_INLINE void LL_SPI_SetTransferSize (SPI_TypeDef * SPIx, uint32_t Count)

Function description

Set transfer size.

Parameters

- **SPIx:** SPI Instance
- **Count:** 0..0xFFFF

Return values

- **None:**

Notes

- Count is the number of frame to be transferred

Reference Manual to LL API cross reference:

- CR2 TSIZE LL_SPI_SetTransferSize

LL_SPI_GetTransferSize

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTransferSize (SPI_TypeDef * SPIx)

Function description

Get transfer size.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Notes

- Count is the number of frame to be transferred

Reference Manual to LL API cross reference:

- CR2 TSIZE LL_SPI_GetTransferSize

LL_SPI_SetReloadSize

Function name

__STATIC_INLINE void LL_SPI_SetReloadSize (SPI_TypeDef * SPIx, uint32_t Count)

Function description

Set reload transfer size.

Parameters

- **SPIx:** SPI Instance
- **Count:** 0..0xFFFF

Return values

- **None:**

Notes

- Count is the number of frame to be transferred

Reference Manual to LL API cross reference:

- CR2 TSER LL_SPI_SetReloadSize

LL_SPI_GetReloadSize

Function name

__STATIC_INLINE uint32_t LL_SPI_GetReloadSize (SPI_TypeDef * SPIx)

Function description

Get reload transfer size.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Notes

- Count is the number of frame to be transferred

Reference Manual to LL API cross reference:

- CR2 TSER LL_SPI_GetReloadSize

LL_SPI_EnableIOLock

Function name

__STATIC_INLINE void LL_SPI_EnableIOLock (SPI_TypeDef * SPIx)

Function description

Lock the AF configuration of associated IOs.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- Once this bit is set, the AF configuration remains locked until a hardware reset occurs. the reset of the IOLock bit is done by hardware. for that, LL_SPI_DisableIOLock can not exist.

Reference Manual to LL API cross reference:

- CR1 IOLOCK LL_SPI_EnableIOLock

LL_SPI_IsEnabledIOLock

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIOLock (SPI_TypeDef * SPIx)

Function description

Check if the AF configuration is locked.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 IOLOCK LL_SPI_IsEnabledIOLock

LL_SPI_SetTxCRCInitPattern

Function name

__STATIC_INLINE void LL_SPI_SetTxCRCInitPattern (SPI_TypeDef * SPIx, uint32_t TXCRCInitAll)

Function description

Set Tx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance
- **TXCRCInitAll:** This parameter can be one of the following values:
  - LL_SPI_TXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_TXCRCINIT_ALL_ONES_PATTERN

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCRCINI LL_SPI_SetTxCRCInitPattern

LL_SPI_GetTxCRCInitPattern

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTxCRCInitPattern (SPI_TypeDef * SPIx)

Function description

Get Tx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_TXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_TXCRCINIT_ALL_ONES_PATTERN

Reference Manual to LL API cross reference:

- CR1 TCRCINI LL_SPI_GetTxCRCInitPattern

LL_SPI_SetRxCRCInitPattern

Function name

__STATIC_INLINE void LL_SPI_SetRxCRCInitPattern (SPI_TypeDef * SPIx, uint32_t RXCRCInitAll)

Function description

Set Rx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance
- **RXCRCInitAll:** This parameter can be one of the following values:
  - LL_SPI_RXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_RXCRCINIT_ALL_ONES_PATTERN

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RCRCINI LL_SPI_SetRxCRCInitPattern

LL_SPI_GetRxCRCInitPattern

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRxCRCInitPattern (SPI_TypeDef * SPIx)

Function description

Get Rx CRC Initialization Pattern.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_RXCRCINIT_ALL_ZERO_PATTERN
  - LL_SPI_RXCRCINIT_ALL_ONES_PATTERN

Reference Manual to LL API cross reference:

- CR1 RCRCINI LL_SPI_GetRxCRCInitPattern

LL_SPI_SetInternalSSLevel

Function name

__STATIC_INLINE void LL_SPI_SetInternalSSLevel (SPI_TypeDef * SPIx, uint32_t SSLevel)

Function description

Set internal SS input level ignoring what comes from PIN.

Parameters

- **SPIx:** SPI Instance
- **SSLevel:** This parameter can be one of the following values:
  - LL_SPI_SS_LEVEL_HIGH
  - LL_SPI_SS_LEVEL_LOW

Return values

- **None:**

Notes

- This configuration has effect only with config LL_SPI_NSS_SOFT

Reference Manual to LL API cross reference:

- CR1 SSI LL_SPI_SetInternalSSLevel

LL_SPI_GetInternalSSLevel

Function name

__STATIC_INLINE uint32_t LL_SPI_GetInternalSSLevel (SPI_TypeDef * SPIx)

Function description

Get internal SS input level.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_SS_LEVEL_HIGH
  - LL_SPI_SS_LEVEL_LOW

Reference Manual to LL API cross reference:

- CR1 SSI LL_SPI_GetInternalSSLevel

LL_SPI_EnableFullSizeCRC

Function name

__STATIC_INLINE void LL_SPI_EnableFullSizeCRC (SPI_TypeDef * SPIx)

Function description

Enable CRC computation on 33/17 bits.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CRC33_17 LL_SPI_EnableFullSizeCRC

LL_SPI_DisableFullSizeCRC

Function name

__STATIC_INLINE void LL_SPI_DisableFullSizeCRC (SPI_TypeDef * SPIx)

Function description

Disable CRC computation on 33/17 bits.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CRC33_17 LL_SPI_DisableFullSizeCRC

LL_SPI_IsEnabledFullSizeCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledFullSizeCRC (SPI_TypeDef * SPIx)

Function description

Check if Enable CRC computation on 33/17 bits is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 CRC33_17 LL_SPI_IsEnabledFullSizeCRC

LL_SPI_SuspendMasterTransfer

Function name

__STATIC_INLINE void LL_SPI_SuspendMasterTransfer (SPI_TypeDef * SPIx)

Function description

Suspend an ongoing transfer for Master configuration.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CSUSP LL_SPI_SuspendMasterTransfer

LL_SPI_StartMasterTransfer

Function name

__STATIC_INLINE void LL_SPI_StartMasterTransfer (SPI_TypeDef * SPIx)

Function description

Start effective transfer on wire for Master configuration.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CSTART LL_SPI_StartMasterTransfer

LL_SPI_IsActiveMasterTransfer

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveMasterTransfer (SPI_TypeDef * SPIx)

Function description

Check if there is an unfinished master transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 CSTART LL_SPI_IsActiveMasterTransfer

LL_SPI_EnableMasterRxAutoSuspend

Function name

__STATIC_INLINE void LL_SPI_EnableMasterRxAutoSuspend (SPI_TypeDef * SPIx)

Function description

Enable Master Rx auto suspend in case of overrun.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MASRX LL_SPI_EnableMasterRxAutoSuspend

LL_SPI_DisableMasterRxAutoSuspend

Function name

__STATIC_INLINE void LL_SPI_DisableMasterRxAutoSuspend (SPI_TypeDef * SPIx)

Function description

Disable Master Rx auto suspend in case of overrun.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MASRX LL_SPI_DisableMasterRxAutoSuspend

LL_SPI_IsEnabledMasterRxAutoSuspend

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledMasterRxAutoSuspend (SPI_TypeDef * SPIx)

Function description

Check if Master Rx auto suspend is activated.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 MASRX LL_SPI_IsEnabledMasterRxAutoSuspend

LL_SPI_SetUDRConfiguration

Function name

__STATIC_INLINE void LL_SPI_SetUDRConfiguration (SPI_TypeDef * SPIx, uint32_t UDRConfig)

Function description

Set Underrun behavior.

Parameters

- **SPIx:** SPI Instance
- **UDRConfig:** This parameter can be one of the following values:
  - LL_SPI_UDR_CONFIG_REGISTER_PATTERN
  - LL_SPI_UDR_CONFIG_LAST_RECEIVED
  - LL_SPI_UDR_CONFIG_LAST_TRANSMITTED

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 UDRCFG LL_SPI_SetUDRConfiguration

LL_SPI_GetUDRConfiguration

Function name

__STATIC_INLINE uint32_t LL_SPI_GetUDRConfiguration (SPI_TypeDef * SPIx)

Function description

Get Underrun behavior.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_UDR_CONFIG_REGISTER_PATTERN
  - LL_SPI_UDR_CONFIG_LAST_RECEIVED
  - LL_SPI_UDR_CONFIG_LAST_TRANSMITTED

Reference Manual to LL API cross reference:

- CFG1 UDRCFG LL_SPI_GetUDRConfiguration

LL_SPI_SetUDRDetection

Function name

__STATIC_INLINE void LL_SPI_SetUDRDetection (SPI_TypeDef * SPIx, uint32_t UDRDetection)

Function description

Set Underrun Detection method.

Parameters

- **SPIx:** SPI Instance
- **UDRDetection:** This parameter can be one of the following values:
  - LL_SPI_UDR_DETECT_BEGIN_DATA_FRAME
  - LL_SPI_UDR_DETECT_END_DATA_FRAME
  - LL_SPI_UDR_DETECT_BEGIN_ACTIVE_NSS

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 UDRDET LL_SPI_SetUDRDetection

LL_SPI_GetUDRDetection

Function name

__STATIC_INLINE uint32_t LL_SPI_GetUDRDetection (SPI_TypeDef * SPIx)

Function description

Get Underrun Detection method.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_UDR_DETECT_BEGIN_DATA_FRAME
  - LL_SPI_UDR_DETECT_END_DATA_FRAME
  - LL_SPI_UDR_DETECT_BEGIN_ACTIVE_NSS

Reference Manual to LL API cross reference:

- CFG1 UDRDET LL_SPI_GetUDRDetection

LL_SPI_SetStandard

Function name

__STATIC_INLINE void LL_SPI_SetStandard (SPI_TypeDef * SPIx, uint32_t Standard)

Function description

Set Serial protocol used.

Parameters

- **SPIx:** SPI Instance
- **Standard:** This parameter can be one of the following values:
  - LL_SPI_PROTOCOL_MOTOROLA
  - LL_SPI_PROTOCOL_TI

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG2 SP LL_SPI_SetStandard

LL_SPI_GetStandard

Function name

__STATIC_INLINE uint32_t LL_SPI_GetStandard (SPI_TypeDef * SPIx)

Function description

Get Serial protocol used.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_PROTOCOL_MOTOROLA
  - LL_SPI_PROTOCOL_TI

Reference Manual to LL API cross reference:

- CFG2 SP LL_SPI_GetStandard

LL_SPI_SetClockPhase

Function name

__STATIC_INLINE void LL_SPI_SetClockPhase (SPI_TypeDef * SPIx, uint32_t ClockPhase)

Function description

Set Clock phase.

Parameters

- **SPIx:** SPI Instance
- **ClockPhase:** This parameter can be one of the following values:
  - LL_SPI_PHASE_1EDGE
  - LL_SPI_PHASE_2EDGE

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 CPHA LL_SPI_SetClockPhase

LL_SPI_GetClockPhase

Function name

__STATIC_INLINE uint32_t LL_SPI_GetClockPhase (SPI_TypeDef * SPIx)

Function description

Get Clock phase.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_PHASE_1EDGE
  - LL_SPI_PHASE_2EDGE

Reference Manual to LL API cross reference:

- CFG2 CPHA LL_SPI_GetClockPhase

LL_SPI_SetClockPolarity

Function name

__STATIC_INLINE void LL_SPI_SetClockPolarity (SPI_TypeDef * SPIx, uint32_t ClockPolarity)

Function description

Set Clock polarity.

Parameters

- **SPIx:** SPI Instance
- **ClockPolarity:** This parameter can be one of the following values:
  - LL_SPI_POLARITY_LOW
  - LL_SPI_POLARITY_HIGH

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 CPOL LL_SPI_SetClockPolarity

LL_SPI_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_SPI_GetClockPolarity (SPI_TypeDef * SPIx)

Function description

Get Clock polarity.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_POLARITY_LOW
  - LL_SPI_POLARITY_HIGH

Reference Manual to LL API cross reference:

- CFG2 CPOL LL_SPI_GetClockPolarity

LL_SPI_SetNSSPolarity

Function name

__STATIC_INLINE void LL_SPI_SetNSSPolarity (SPI_TypeDef * SPIx, uint32_t NSSPolarity)

Function description

Set NSS polarity.

Parameters

- **SPIx:** SPI Instance
- **NSSPolarity:** This parameter can be one of the following values:
  - LL_SPI_NSS_POLARITY_LOW
  - LL_SPI_NSS_POLARITY_HIGH

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSIOP LL_SPI_SetNSSPolarity

LL_SPI_GetNSSPolarity

Function name

__STATIC_INLINE uint32_t LL_SPI_GetNSSPolarity (SPI_TypeDef * SPIx)

Function description

Get NSS polarity.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_NSS_POLARITY_LOW
  - LL_SPI_NSS_POLARITY_HIGH

Reference Manual to LL API cross reference:

- CFG2 SSIOP LL_SPI_GetNSSPolarity

LL_SPI_SetBaudRatePrescaler

Function name

__STATIC_INLINE void LL_SPI_SetBaudRatePrescaler (SPI_TypeDef * SPIx, uint32_t Baudrate)

Function description

Set Baudrate Prescaler.

Parameters

- **SPIx:** SPI Instance
- **Baudrate:** This parameter can be one of the following values:
  - LL_SPI_BAUDRATEPRESCALER_DIV2
  - LL_SPI_BAUDRATEPRESCALER_DIV4
  - LL_SPI_BAUDRATEPRESCALER_DIV8
  - LL_SPI_BAUDRATEPRESCALER_DIV16
  - LL_SPI_BAUDRATEPRESCALER_DIV32
  - LL_SPI_BAUDRATEPRESCALER_DIV64
  - LL_SPI_BAUDRATEPRESCALER_DIV128
  - LL_SPI_BAUDRATEPRESCALER_DIV256

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. SPI BaudRate = fPCLK/Pescaler.

Reference Manual to LL API cross reference:

- CFG1 MBR LL_SPI_SetBaudRatePrescaler

LL_SPI_GetBaudRatePrescaler

Function name

__STATIC_INLINE uint32_t LL_SPI_GetBaudRatePrescaler (SPI_TypeDef * SPIx)

Function description

Get Baudrate Prescaler.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_BAUDRATEPRESCALER_DIV2
  - LL_SPI_BAUDRATEPRESCALER_DIV4
  - LL_SPI_BAUDRATEPRESCALER_DIV8
  - LL_SPI_BAUDRATEPRESCALER_DIV16
  - LL_SPI_BAUDRATEPRESCALER_DIV32
  - LL_SPI_BAUDRATEPRESCALER_DIV64
  - LL_SPI_BAUDRATEPRESCALER_DIV128
  - LL_SPI_BAUDRATEPRESCALER_DIV256

Reference Manual to LL API cross reference:

- CFG1 MBR LL_SPI_GetBaudRatePrescaler

LL_SPI_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_SPI_SetTransferBitOrder (SPI_TypeDef * SPIx, uint32_t BitOrder)

Function description

Set Transfer Bit Order.

Parameters

- **SPIx:** SPI Instance
- **BitOrder:** This parameter can be one of the following values:
  - LL_SPI_LSB_FIRST
  - LL_SPI_MSB_FIRST

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 LSBFRST LL_SPI_SetTransferBitOrder

LL_SPI_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTransferBitOrder (SPI_TypeDef * SPIx)

Function description

Get Transfer Bit Order.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_LSB_FIRST
  - LL_SPI_MSB_FIRST

Reference Manual to LL API cross reference:

- CFG2 LSBFRST LL_SPI_GetTransferBitOrder

LL_SPI_SetTransferDirection

Function name

__STATIC_INLINE void LL_SPI_SetTransferDirection (SPI_TypeDef * SPIx, uint32_t TransferDirection)

Function description

Set Transfer Mode.

Parameters

- **SPIx:** SPI Instance
- **TransferDirection:** This parameter can be one of the following values:
  - LL_SPI_FULL_DUPLEX
  - LL_SPI_SIMPLEX_TX
  - LL_SPI_SIMPLEX_RX
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled except for half duplex direction using LL_SPI_SetHalfDuplexDirection.

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_SetTransferDirection
- CFG2 COMM LL_SPI_SetTransferDirection

LL_SPI_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTransferDirection (SPI_TypeDef * SPIx)

Function description

Get Transfer Mode.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_FULL_DUPLEX
  - LL_SPI_SIMPLEX_TX
  - LL_SPI_SIMPLEX_RX
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_GetTransferDirection
- CFG2 COMM LL_SPI_GetTransferDirection

LL_SPI_SetHalfDuplexDirection

Function name

__STATIC_INLINE void LL_SPI_SetHalfDuplexDirection (SPI_TypeDef * SPIx, uint32_t HalfDuplexDirection)

Function description

Set direction for Half-Duplex Mode.

Parameters

- **SPIx:** SPI Instance
- **HalfDuplexDirection:** This parameter can be one of the following values:
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Return values

- **None:**

Notes

- In master mode the MOSI pin is used and in slave mode the MISO pin is used for Half-Duplex.

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_SetHalfDuplexDirection

LL_SPI_GetHalfDuplexDirection

Function name

__STATIC_INLINE uint32_t LL_SPI_GetHalfDuplexDirection (SPI_TypeDef * SPIx)

Function description

Get direction for Half-Duplex Mode.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_HALF_DUPLEX_RX
  - LL_SPI_HALF_DUPLEX_TX

Notes

- In master mode the MOSI pin is used and in slave mode the MISO pin is used for Half-Duplex.

Reference Manual to LL API cross reference:

- CR1 HDDIR LL_SPI_GetHalfDuplexDirection

LL_SPI_SetDataWidth

Function name

__STATIC_INLINE void LL_SPI_SetDataWidth (SPI_TypeDef * SPIx, uint32_t DataWidth)

Function description

Set Frame Data Size.

Parameters

- **SPIx:** SPI Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_SPI_DATAWIDTH_4BIT
  - LL_SPI_DATAWIDTH_5BIT
  - LL_SPI_DATAWIDTH_6BIT
  - LL_SPI_DATAWIDTH_7BIT
  - LL_SPI_DATAWIDTH_8BIT
  - LL_SPI_DATAWIDTH_9BIT
  - LL_SPI_DATAWIDTH_10BIT
  - LL_SPI_DATAWIDTH_11BIT
  - LL_SPI_DATAWIDTH_12BIT
  - LL_SPI_DATAWIDTH_13BIT
  - LL_SPI_DATAWIDTH_14BIT
  - LL_SPI_DATAWIDTH_15BIT

  - LL_SPI_DATAWIDTH_21BIT
  - LL_SPI_DATAWIDTH_22BIT
  - LL_SPI_DATAWIDTH_23BIT
  - LL_SPI_DATAWIDTH_24BIT
  - LL_SPI_DATAWIDTH_25BIT
  - LL_SPI_DATAWIDTH_26BIT
  - LL_SPI_DATAWIDTH_27BIT
  - LL_SPI_DATAWIDTH_28BIT
  - LL_SPI_DATAWIDTH_29BIT
  - LL_SPI_DATAWIDTH_30BIT
  - LL_SPI_DATAWIDTH_31BIT
  - LL_SPI_DATAWIDTH_32BIT

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled.

Reference Manual to LL API cross reference:

- CFG1 DSIZE LL_SPI_SetDataWidth

LL_SPI_GetDataWidth

Function name

__STATIC_INLINE uint32_t LL_SPI_GetDataWidth (SPI_TypeDef * SPIx)

Function description

Get Frame Data Size.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_DATAWIDTH_4BIT
  - LL_SPI_DATAWIDTH_5BIT
  - LL_SPI_DATAWIDTH_6BIT
  - LL_SPI_DATAWIDTH_7BIT
  - LL_SPI_DATAWIDTH_8BIT
  - LL_SPI_DATAWIDTH_9BIT
  - LL_SPI_DATAWIDTH_10BIT
  - LL_SPI_DATAWIDTH_11BIT
  - LL_SPI_DATAWIDTH_12BIT

LL_SPI_SetFIFOThreshold

Function name

__STATIC_INLINE void LL_SPI_SetFIFOThreshold (SPI_TypeDef * SPIx, uint32_t Threshold)

Function description

Set threshold of FIFO that triggers a transfer event.

Parameters

- **SPIx:** SPI Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_SPI_FIFO_TH_01DATA
  - LL_SPI_FIFO_TH_02DATA
  - LL_SPI_FIFO_TH_03DATA
  - LL_SPI_FIFO_TH_04DATA
  - LL_SPI_FIFO_TH_05DATA

- **Returned:** value can be one of the following values:
  - LL_SPI_NSS_SOFT
  - LL_SPI_NSS_HARD_INPUT
  - LL_SPI_NSS_HARD_OUTPUT

Reference Manual to LL API cross reference:

- CFG2 SSM LL_SPI_GetNSSMode
- CFG2 SSOE LL_SPI_GetNSSMode

LL_SPI_EnableNSSPulseMgt

Function name

__STATIC_INLINE void LL_SPI_EnableNSSPulseMgt (SPI_TypeDef * SPIx)

Function description

Enable NSS pulse mgt.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSOM LL_SPI_EnableNSSPulseMgt

LL_SPI_DisableNSSPulseMgt

Function name

__STATIC_INLINE void LL_SPI_DisableNSSPulseMgt (SPI_TypeDef * SPIx)

Function description

Disable NSS pulse mgt.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when SPI is enabled. This bit is not used in SPI TI mode.

Reference Manual to LL API cross reference:

- CFG2 SSOM LL_SPI_DisableNSSPulseMgt

LL_SPI_IsEnabledNSSPulse

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledNSSPulse (SPI_TypeDef * SPIx)

Function description

Check if NSS pulse is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 SSOM LL_SPI_IsEnabledNSSPulse

LL_SPI_IsActiveFlag_RXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_RXP (SPI_TypeDef * SPIx)

Function description

Check if there is enough data in FIFO to read a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR RXP LL_SPI_IsActiveFlag_RXP

LL_SPI_IsActiveFlag_TXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TXP (SPI_TypeDef * SPIx)

Function description

Check if there is enough space in FIFO to hold a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR TXP LL_SPI_IsActiveFlag_TXP

LL_SPI_IsActiveFlag_DXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_DXP (SPI_TypeDef * SPIx)

Function description

Check if there enough space in FIFO to hold a full packet, AND enough data to read a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR DXP LL_SPI_IsActiveFlag_DXP

LL_SPI_IsActiveFlag_EOT

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_EOT (SPI_TypeDef * SPIx)

Function description

Check that end of transfer event occurred.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR EOT LL_SPI_IsActiveFlag_EOT

LL_SPI_IsActiveFlag_TXTF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TXTF (SPI_TypeDef * SPIx)

Function description

Check that all required data has been filled in the fifo according to transfer size.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXTF LL_SPI_IsActiveFlag_TXTF

LL_SPI_IsActiveFlag_UDR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_UDR (SPI_TypeDef * SPIx)

Function description

Get Underrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR UDR LL_SPI_IsActiveFlag_UDR

LL_SPI_IsActiveFlag_CRCERR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_CRCERR (SPI_TypeDef * SPIx)

Function description

Get CRC error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CRCE LL_SPI_IsActiveFlag_CRCERR

LL_SPI_IsActiveFlag_MODF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_MODF (SPI_TypeDef * SPIx)

Function description

Get Mode fault error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR MODF LL_SPI_IsActiveFlag_MODF

LL_SPI_IsActiveFlag_OVR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_OVR (SPI_TypeDef * SPIx)

Function description

Get Overrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR OVR LL_SPI_IsActiveFlag_OVR

LL_SPI_IsActiveFlag_FRE

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_FRE (SPI_TypeDef * SPIx)

Function description

Get TI Frame format error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TIFRE LL_SPI_IsActiveFlag_FRE

LL_SPI_IsActiveFlag_TSER

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TSER (SPI_TypeDef * SPIx)

Function description

Check if the additional number of data has been reloaded.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TSERF LL_SPI_IsActiveFlag_TSER

LL_SPI_IsActiveFlag_SUSP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_SUSP (SPI_TypeDef * SPIx)

Function description

Check if a suspend operation is done.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR SUSP LL_SPI_IsActiveFlag_SUSP

LL_SPI_IsActiveFlag_TXC

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_TXC (SPI_TypeDef * SPIx)

Function description

Check if last TxFIFO or CRC frame transmission is completed.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TXC LL_SPI_IsActiveFlag_TXC

LL_SPI_IsActiveFlag_RXWNE

Function name

__STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_RXWNE (SPI_TypeDef * SPIx)

Function description

Check if at least one 32-bit data is available in RxFIFO.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR RXWNE LL_SPI_IsActiveFlag_RXWNE

LL_SPI_GetRemainingDataFrames

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRemainingDataFrames (SPI_TypeDef * SPIx)

Function description

Get number of data framed remaining in current TSIZE.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Reference Manual to LL API cross reference:

- SR CTSIZE LL_SPI_GetRemainingDataFrames

LL_SPI_GetRxFIFOPackingLevel

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRxFIFOPackingLevel (SPI_TypeDef * SPIx)

Function description

Get RxFIFO packing Level.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SPI_RX_FIFO_0PACKET
  - LL_SPI_RX_FIFO_1PACKET
  - LL_SPI_RX_FIFO_2PACKET
  - LL_SPI_RX_FIFO_3PACKET

Reference Manual to LL API cross reference:

- SR RXPLVL LL_SPI_GetRxFIFOPackingLevel

LL_SPI_ClearFlag_EOT

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_EOT (SPI_TypeDef * SPIx)

Function description

Clear End Of Transfer flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR EOTC LL_SPI_ClearFlag_EOT

LL_SPI_ClearFlag_TXTF

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_TXTF (SPI_TypeDef * SPIx)

Function description

Clear TXTF flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR TXTFC LL_SPI_ClearFlag_TXTF

LL_SPI_ClearFlag_UDR

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_UDR (SPI_TypeDef * SPIx)

Function description

Clear Underrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR UDRC LL_SPI_ClearFlag_UDR

LL_SPI_ClearFlag_OVR

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_OVR (SPI_TypeDef * SPIx)

Function description

Clear Overrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR OVRC LL_SPI_ClearFlag_OVR

LL_SPI_ClearFlag_CRCERR

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_CRCERR (SPI_TypeDef * SPIx)

Function description

Clear CRC error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR CRCEC LL_SPI_ClearFlag_CRCERR

LL_SPI_ClearFlag_MODF

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_MODF (SPI_TypeDef * SPIx)

Function description

Clear Mode fault error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR MODFC LL_SPI_ClearFlag_MODF

LL_SPI_ClearFlag_FRE

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_FRE (SPI_TypeDef * SPIx)

Function description

Clear Frame format error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR TIFREC LL_SPI_ClearFlag_FRE

LL_SPI_ClearFlag_TSER

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_TSER (SPI_TypeDef * SPIx)

Function description

Clear TSER flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR TSERFC LL_SPI_ClearFlag_TSER

LL_SPI_ClearFlag_SUSP

Function name

__STATIC_INLINE void LL_SPI_ClearFlag_SUSP (SPI_TypeDef * SPIx)

Function description

Clear SUSP flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR SUSPC LL_SPI_ClearFlag_SUSP

LL_SPI_EnableIT_RXP

Function name

__STATIC_INLINE void LL_SPI_EnableIT_RXP (SPI_TypeDef * SPIx)

Function description

Enable Rx Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXPIE LL_SPI_EnableIT_RXP

LL_SPI_EnableIT_TXP

Function name

__STATIC_INLINE void LL_SPI_EnableIT_TXP (SPI_TypeDef * SPIx)

Function description

Enable Tx Packet space available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXPIE LL_SPI_EnableIT_TXP

LL_SPI_EnableIT_DXP

Function name

__STATIC_INLINE void LL_SPI_EnableIT_DXP (SPI_TypeDef * SPIx)

Function description

Enable Duplex Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DXPIE LL_SPI_EnableIT_DXP

LL_SPI_EnableIT_EOT

Function name

__STATIC_INLINE void LL_SPI_EnableIT_EOT (SPI_TypeDef * SPIx)

Function description

Enable End Of Transfer IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOTIE LL_SPI_EnableIT_EOT

LL_SPI_EnableIT_TXTF

Function name

__STATIC_INLINE void LL_SPI_EnableIT_TXTF (SPI_TypeDef * SPIx)

Function description

Enable TXTF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXTFIE LL_SPI_EnableIT_TXTF

LL_SPI_EnableIT_UDR

Function name

__STATIC_INLINE void LL_SPI_EnableIT_UDR (SPI_TypeDef * SPIx)

Function description

Enable Underrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UDRIE LL_SPI_EnableIT_UDR

LL_SPI_EnableIT_OVR

Function name

__STATIC_INLINE void LL_SPI_EnableIT_OVR (SPI_TypeDef * SPIx)

Function description

Enable Overrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_SPI_EnableIT_OVR

LL_SPI_EnableIT_CRCERR

Function name

__STATIC_INLINE void LL_SPI_EnableIT_CRCERR (SPI_TypeDef * SPIx)

Function description

Enable CRC Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRCEIE LL_SPI_EnableIT_CRCERR

LL_SPI_EnableIT_FRE

Function name

__STATIC_INLINE void LL_SPI_EnableIT_FRE (SPI_TypeDef * SPIx)

Function description

Enable TI Frame Format Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIFREIE LL_SPI_EnableIT_FRE

LL_SPI_EnableIT_MODF

Function name

__STATIC_INLINE void LL_SPI_EnableIT_MODF (SPI_TypeDef * SPIx)

Function description

Enable MODF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MODFIE LL_SPI_EnableIT_MODF

LL_SPI_EnableIT_TSER

Function name

__STATIC_INLINE void LL_SPI_EnableIT_TSER (SPI_TypeDef * SPIx)

Function description

Enable TSER reload IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TSERFIE LL_SPI_EnableIT_TSER

LL_SPI_DisableIT_RXP

Function name

__STATIC_INLINE void LL_SPI_DisableIT_RXP (SPI_TypeDef * SPIx)

Function description

Disable Rx Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXPIE LL_SPI_DisableIT_RXP

LL_SPI_DisableIT_TXP

Function name

__STATIC_INLINE void LL_SPI_DisableIT_TXP (SPI_TypeDef * SPIx)

Function description

Disable Tx Packet space available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXPIE LL_SPI_DisableIT_TXP

LL_SPI_DisableIT_DXP

Function name

__STATIC_INLINE void LL_SPI_DisableIT_DXP (SPI_TypeDef * SPIx)

Function description

Disable Duplex Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER DXPIE LL_SPI_DisableIT_DXP

LL_SPI_DisableIT_EOT

Function name

__STATIC_INLINE void LL_SPI_DisableIT_EOT (SPI_TypeDef * SPIx)

Function description

Disable End Of Transfer IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER EOTIE LL_SPI_DisableIT_EOT

LL_SPI_DisableIT_TXTF

Function name

__STATIC_INLINE void LL_SPI_DisableIT_TXTF (SPI_TypeDef * SPIx)

Function description

Disable TXTF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXTFIE LL_SPI_DisableIT_TXTF

LL_SPI_DisableIT_UDR

Function name

__STATIC_INLINE void LL_SPI_DisableIT_UDR (SPI_TypeDef * SPIx)

Function description

Disable Underrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UDRIE LL_SPI_DisableIT_UDR

LL_SPI_DisableIT_OVR

Function name

__STATIC_INLINE void LL_SPI_DisableIT_OVR (SPI_TypeDef * SPIx)

Function description

Disable Overrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_SPI_DisableIT_OVR

LL_SPI_DisableIT_CRCERR

Function name

__STATIC_INLINE void LL_SPI_DisableIT_CRCERR (SPI_TypeDef * SPIx)

Function description

Disable CRC Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER CRCEIE LL_SPI_DisableIT_CRCERR

LL_SPI_DisableIT_FRE

Function name

__STATIC_INLINE void LL_SPI_DisableIT_FRE (SPI_TypeDef * SPIx)

Function description

Disable TI Frame Format Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIFREIE LL_SPI_DisableIT_FRE

LL_SPI_DisableIT_MODF

Function name

__STATIC_INLINE void LL_SPI_DisableIT_MODF (SPI_TypeDef * SPIx)

Function description

Disable MODF IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER MODFIE LL_SPI_DisableIT_MODF

LL_SPI_DisableIT_TSER

Function name

__STATIC_INLINE void LL_SPI_DisableIT_TSER (SPI_TypeDef * SPIx)

Function description

Disable TSER reload IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TSERFIE LL_SPI_DisableIT_TSER

LL_SPI_IsEnabledIT_RXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_RXP (SPI_TypeDef * SPIx)

Function description

Check if Rx Packet available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER RXPIE LL_SPI_IsEnabledIT_RXP

LL_SPI_IsEnabledIT_TXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_TXP (SPI_TypeDef * SPIx)

Function description

Check if Tx Packet space available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TXPIE LL_SPI_IsEnabledIT_TXP

LL_SPI_IsEnabledIT_DXP

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_DXP (SPI_TypeDef * SPIx)

Function description

Check if Duplex Packet available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER DXPIE LL_SPI_IsEnabledIT_DXP

LL_SPI_IsEnabledIT_EOT

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_EOT (SPI_TypeDef * SPIx)

Function description

Check if End Of Transfer IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER EOTIE LL_SPI_IsEnabledIT_EOT

LL_SPI_IsEnabledIT_TXTF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_TXTF (SPI_TypeDef * SPIx)

Function description

Check if TXTF IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TXTFIE LL_SPI_IsEnabledIT_TXTF

LL_SPI_IsEnabledIT_UDR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_UDR (SPI_TypeDef * SPIx)

Function description

Check if Underrun IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER UDRIE LL_SPI_IsEnabledIT_UDR

LL_SPI_IsEnabledIT_OVR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_OVR (SPI_TypeDef * SPIx)

Function description

Check if Overrun IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER OVRIE LL_SPI_IsEnabledIT_OVR

LL_SPI_IsEnabledIT_CRCERR

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_CRCERR (SPI_TypeDef * SPIx)

Function description

Check if CRC Error IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER CRCEIE LL_SPI_IsEnabledIT_CRCERR

LL_SPI_IsEnabledIT_FRE

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_FRE (SPI_TypeDef * SPIx)

Function description

Check if TI Frame Format Error IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TIFREIE LL_SPI_IsEnabledIT_FRE

LL_SPI_IsEnabledIT_MODF

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_MODF (SPI_TypeDef * SPIx)

Function description

Check if MODF IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER MODFIE LL_SPI_IsEnabledIT_MODF

LL_SPI_IsEnabledIT_TSER

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledIT_TSER (SPI_TypeDef * SPIx)

Function description

Check if TSER reload IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TSERFIE LL_SPI_IsEnabledIT_TSER

LL_SPI_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_SPI_EnableDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Enable DMA Rx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_SPI_EnableDMAReq_RX

LL_SPI_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_SPI_DisableDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Disable DMA Rx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_SPI_DisableDMAReq_RX

LL_SPI_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Check if DMA Rx is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_SPI_IsEnabledDMAReq_RX

LL_SPI_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_SPI_EnableDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Enable DMA Tx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_SPI_EnableDMAReq_TX

LL_SPI_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_SPI_DisableDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Disable DMA Tx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_SPI_DisableDMAReq_TX

LL_SPI_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_SPI_IsEnabledDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Check if DMA Tx is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_SPI_IsEnabledDMAReq_TX

LL_SPI_DMA_GetTxRegAddr

Function name

__STATIC_INLINE uint32_t LL_SPI_DMA_GetTxRegAddr (SPI_TypeDef * SPIx)

Function description

Get the data register address used for DMA transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- TXDR TXDR LL_SPI_DMA_GetTxRegAddr

LL_SPI_DMA_GetRxRegAddr

Function name

__STATIC_INLINE uint32_t LL_SPI_DMA_GetRxRegAddr (SPI_TypeDef * SPIx)

Function description

Get the data register address used for DMA transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- RXDR RXDR LL_SPI_DMA_GetRxRegAddr

LL_SPI_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_SPI_ReceiveData8 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_SPI_ReceiveData8

LL_SPI_ReceiveData16

Function name

__STATIC_INLINE uint16_t LL_SPI_ReceiveData16 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_SPI_ReceiveData16

LL_SPI_ReceiveData32

Function name

__STATIC_INLINE uint32_t LL_SPI_ReceiveData32 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_SPI_ReceiveData32

LL_SPI_TransmitData8

Function name

__STATIC_INLINE void LL_SPI_TransmitData8 (SPI_TypeDef * SPIx, uint8_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_SPI_TransmitData8

LL_SPI_TransmitData16

Function name

__STATIC_INLINE void LL_SPI_TransmitData16 (SPI_TypeDef * SPIx, uint16_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_SPI_TransmitData16

LL_SPI_TransmitData32

Function name

__STATIC_INLINE void LL_SPI_TransmitData32 (SPI_TypeDef * SPIx, uint32_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_SPI_TransmitData32

LL_SPI_SetCRCPolynomial

Function name

__STATIC_INLINE void LL_SPI_SetCRCPolynomial (SPI_TypeDef * SPIx, uint32_t CRCPoly)

Function description

Set polynomial for CRC calcul.

Parameters

- **SPIx:** SPI Instance
- **CRCPoly:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- CRCPOLY CRCPOLY LL_SPI_SetCRCPolynomial

LL_SPI_GetCRCPolynomial

Function name

__STATIC_INLINE uint32_t LL_SPI_GetCRCPolynomial (SPI_TypeDef * SPIx)

Function description

Get polynomial for CRC calcul.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- CRCPOLY CRCPOLY LL_SPI_GetCRCPolynomial

LL_SPI_SetUDRPattern

Function name

__STATIC_INLINE void LL_SPI_SetUDRPattern (SPI_TypeDef * SPIx, uint32_t Pattern)

Function description

Set the underrun pattern.

Parameters

- **SPIx:** SPI Instance
- **Pattern:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- UDRDR UDRDR LL_SPI_SetUDRPattern

LL_SPI_GetUDRPattern

Function name

__STATIC_INLINE uint32_t LL_SPI_GetUDRPattern (SPI_TypeDef * SPIx)

Function description

Get the underrun pattern.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- UDRDR UDRDR LL_SPI_GetUDRPattern

LL_SPI_GetRxCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_GetRxCRC (SPI_TypeDef * SPIx)

Function description

Get Rx CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- RXCRCR RXCRC LL_SPI_GetRxCRC

LL_SPI_GetTxCRC

Function name

__STATIC_INLINE uint32_t LL_SPI_GetTxCRC (SPI_TypeDef * SPIx)

Function description

Get Tx CRC.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- TXCRCR TXCRC LL_SPI_GetTxCRC

LL_SPI_DeInit

Function name

ErrorStatus LL_SPI_DeInit (SPI_TypeDef * SPIx)

Function description

De-initialize the SPI registers to their default reset values.

Parameters

- **SPIx:** SPI Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: SPI registers are de-initialized
  - ERROR: SPI registers are not de-initialized

LL_SPI_Init

Function name

ErrorStatus LL_SPI_Init (SPI_TypeDef * SPIx, LL_SPI_InitTypeDef * SPI_InitStruct)

Function description

Initialize the SPI registers according to the specified parameters in SPI_InitStruct.

Parameters

- **SPIx:** SPI Instance
- **SPI_InitStruct:** pointer to a LL_SPI_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value. (Return always SUCCESS)

Notes

- As some bits in SPI configuration registers can only be written when the SPI is disabled (SPI_CR1_SPE bit =0), SPI IP should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.

LL_SPI_StructInit

Function name

void LL_SPI_StructInit (LL_SPI_InitTypeDef * SPI_InitStruct)

Function description

Set each LL_SPI_InitTypeDef field to default value.

Parameters

- **SPI_InitStruct:** pointer to a LL_SPI_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_I2S_SetDataFormat

Function name

__STATIC_INLINE void LL_I2S_SetDataFormat (SPI_TypeDef * SPIx, uint32_t DataLength)

Function description

Set I2S Data frame format.

Parameters

- **SPIx:** SPI Handle
- **DataLength:** This parameter can be one of the following values:
  - LL_I2S_DATAFORMAT_16B
  - LL_I2S_DATAFORMAT_16B_EXTENDED
  - LL_I2S_DATAFORMAT_24B
  - LL_I2S_DATAFORMAT_24B_LEFT_ALIGNED
  - LL_I2S_DATAFORMAT_32B

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR DATLEN LL_I2S_SetDataFormat
- I2SCFGR CHLEN LL_I2S_SetDataFormat
- I2SCFGR DATFMT LL_I2S_SetDataFormat

LL_I2S_GetDataFormat

Function name

__STATIC_INLINE uint32_t LL_I2S_GetDataFormat (SPI_TypeDef * SPIx)

Function description

Get I2S Data frame format.

Parameters

- **SPIx:** SPI Handle

Return values

- **Return:** value can be one of the following values:
  - LL_I2S_DATAFORMAT_16B
  - LL_I2S_DATAFORMAT_16B_EXTENDED
  - LL_I2S_DATAFORMAT_24B
  - LL_I2S_DATAFORMAT_24B_LEFT_ALIGNED
  - LL_I2S_DATAFORMAT_32B

Reference Manual to LL API cross reference:

- I2SCFGR DATLEN LL_I2S_GetDataFormat
- I2SCFGR CHLEN LL_I2S_GetDataFormat
- I2SCFGR DATFMT LL_I2S_GetDataFormat

LL_I2S_SetChannelLengthType

Function name

__STATIC_INLINE void LL_I2S_SetChannelLengthType (SPI_TypeDef * SPIx, uint32_t ChannelLengthType)

Function description

Set I2S Channel Length Type.

Parameters

- **SPIx:** SPI Handle
- **ChannelLengthType:** This parameter can be one of the following values:
  - LL_I2S_SLAVE_VARIABLE_CH_LENGTH
  - LL_I2S_SLAVE_FIXED_CH_LENGTH

Return values

- **None:**

Notes

- This feature is useful with SLAVE only

Reference Manual to LL API cross reference:

- I2SCFGR FIXCH LL_I2S_SetChannelLengthType

LL_I2S_GetChannelLengthType

Function name

__STATIC_INLINE uint32_t LL_I2S_GetChannelLengthType (SPI_TypeDef * SPIx)

Function description

Get I2S Channel Length Type.

Parameters

- **SPIx:** SPI Handle

Return values

- **Return:** value can be one of the following values:
  - LL_I2S_SLAVE_VARIABLE_CH_LENGTH
  - LL_I2S_SLAVE_FIXED_CH_LENGTH

Notes

- This feature is useful with SLAVE only

Reference Manual to LL API cross reference:

- I2SCFGR FIXCH LL_I2S_GetChannelLengthType

LL_I2S_EnableWordSelectInversion

Function name

__STATIC_INLINE void LL_I2S_EnableWordSelectInversion (SPI_TypeDef * SPIx)

Function description

Invert the default polarity of WS signal.

Parameters

- **SPIx:** SPI Handle

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR WSINV LL_I2S_EnableWordSelectInversion

LL_I2S_DisableWordSelectInversion

Function name

__STATIC_INLINE void LL_I2S_DisableWordSelectInversion (SPI_TypeDef * SPIx)

Function description

Use the default polarity of WS signal.

Parameters

- **SPIx:** SPI Handle

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR WSINV LL_I2S_DisableWordSelectInversion

LL_I2S_IsEnabledWordSelectInversion

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledWordSelectInversion (SPI_TypeDef * SPIx)

Function description

Check if polarity of WS signal is inverted.

Parameters

- **SPIx:** SPI Handle

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- I2SCFGR WSINV LL_I2S_IsEnabledWordSelectInversion

LL_I2S_SetClockPolarity

Function name

__STATIC_INLINE void LL_I2S_SetClockPolarity (SPI_TypeDef * SPIx, uint32_t ClockPolarity)

Function description

Set 2S Clock Polarity.

Parameters

- **SPIx:** SPI Handle
- **ClockPolarity:** This parameter can be one of the following values:
  - LL_I2S_POLARITY_LOW
  - LL_I2S_POLARITY_HIGH

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR CKPOL LL_I2S_SetClockPolarity

LL_I2S_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_I2S_GetClockPolarity (SPI_TypeDef * SPIx)

Function description

Get 2S Clock Polarity.

Parameters

- **SPIx:** SPI Handle

Return values

- **Return:** value can be one of the following values:
  - LL_I2S_POLARITY_LOW
  - LL_I2S_POLARITY_HIGH

Reference Manual to LL API cross reference:

- I2SCFGR CKPOL LL_I2S_GetClockPolarity

LL_I2S_SetStandard

Function name

__STATIC_INLINE void LL_I2S_SetStandard (SPI_TypeDef * SPIx, uint32_t Standard)

Function description

Set I2S standard.

Parameters

- **SPIx:** SPI Handle
- **Standard:** This parameter can be one of the following values:
  - LL_I2S_STANDARD_PHILIPS
  - LL_I2S_STANDARD_MSB
  - LL_I2S_STANDARD_LSB
  - LL_I2S_STANDARD_PCM_SHORT
  - LL_I2S_STANDARD_PCM_LONG

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR I2SSTD LL_I2S_SetStandard
- I2SCFGR PCMSYNC LL_I2S_SetStandard

LL_I2S_GetStandard

Function name

__STATIC_INLINE uint32_t LL_I2S_GetStandard (SPI_TypeDef * SPIx)

Function description

Get I2S standard.

Parameters

- **SPIx:** SPI Handle

Return values

- **Return:** value can be one of the following values:
  - LL_I2S_STANDARD_PHILIPS
  - LL_I2S_STANDARD_MSB
  - LL_I2S_STANDARD_LSB
  - LL_I2S_STANDARD_PCM_SHORT
  - LL_I2S_STANDARD_PCM_LONG

Reference Manual to LL API cross reference:

- I2SCFGR I2SSTD LL_I2S_GetStandard
- I2SCFGR PCMSYNC LL_I2S_GetStandard

LL_I2S_SetTransferMode

Function name

__STATIC_INLINE void LL_I2S_SetTransferMode (SPI_TypeDef * SPIx, uint32_t Standard)

Function description

Set I2S config.

Parameters

- **SPIx:** SPI Handle
- **Standard:** This parameter can be one of the following values:
  - LL_I2S_MODE_SLAVE_TX
  - LL_I2S_MODE_SLAVE_RX
  - LL_I2S_MODE_SLAVE_FULL_DUPLEX
  - LL_I2S_MODE_MASTER_TX
  - LL_I2S_MODE_MASTER_RX
  - LL_I2S_MODE_MASTER_FULL_DUPLEX

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR I2SCFG LL_I2S_SetTransferMode

LL_I2S_GetTransferMode

Function name

__STATIC_INLINE uint32_t LL_I2S_GetTransferMode (SPI_TypeDef * SPIx)

Function description

Get I2S config.

Parameters

- **SPIx:** SPI Handle

Return values

- **Return:** value can be one of the following values:
  - LL_I2S_MODE_SLAVE_TX
  - LL_I2S_MODE_SLAVE_RX
  - LL_I2S_MODE_SLAVE_FULL_DUPLEX
  - LL_I2S_MODE_MASTER_TX
  - LL_I2S_MODE_MASTER_RX
  - LL_I2S_MODE_MASTER_FULL_DUPLEX

Reference Manual to LL API cross reference:

- I2SCFGR I2SCFG LL_I2S_GetTransferMode

LL_I2S_Enable

Function name

__STATIC_INLINE void LL_I2S_Enable (SPI_TypeDef * SPIx)

Function description

Select I2S mode and Enable I2S peripheral.

Parameters

- **SPIx:** SPI Handle

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR I2SMOD LL_I2S_Enable
- CR1 SPE LL_I2S_Enable

LL_I2S_Disable

Function name

__STATIC_INLINE void LL_I2S_Disable (SPI_TypeDef * SPIx)

Function description

Disable I2S peripheral and disable I2S mode.

Parameters

- **SPIx:** SPI Handle

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 SPE LL_I2S_Disable
- I2SCFGR I2SMOD LL_I2S_Disable

LL_I2S_EnableIOSwap

Function name

__STATIC_INLINE void LL_I2S_EnableIOSwap (SPI_TypeDef * SPIx)

Function description

Swap the SDO and SDI pin.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when I2S is enabled.

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_I2S_EnableIOSwap

LL_I2S_DisableIOSwap

Function name

__STATIC_INLINE void LL_I2S_DisableIOSwap (SPI_TypeDef * SPIx)

Function description

Restore default function for SDO and SDI pin.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when I2S is enabled.

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_I2S_DisableIOSwap

LL_I2S_IsEnabledIOSwap

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledIOSwap (SPI_TypeDef * SPIx)

Function description

Check if SDO and SDI pin are swapped.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 IOSWP LL_I2S_IsEnabledIOSwap

LL_I2S_EnableGPIOControl

Function name

__STATIC_INLINE void LL_I2S_EnableGPIOControl (SPI_TypeDef * SPIx)

Function description

Enable GPIO control.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when I2S is enabled.

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_I2S_EnableGPIOControl

LL_I2S_DisableGPIOControl

Function name

__STATIC_INLINE void LL_I2S_DisableGPIOControl (SPI_TypeDef * SPIx)

Function description

Disable GPIO control.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- This configuration can not be changed when I2S is enabled.

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_I2S_DisableGPIOControl

LL_I2S_IsEnabledGPIOControl

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledGPIOControl (SPI_TypeDef * SPIx)

Function description

Check if GPIO control is active.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG2 AFCNTR LL_I2S_IsEnabledGPIOControl

LL_I2S_EnableIOLock

Function name

__STATIC_INLINE void LL_I2S_EnableIOLock (SPI_TypeDef * SPIx)

Function description

Lock the AF configuration of associated IOs.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Notes

- Once this bit is set, the SPI_CFG2 register content can not be modified until a hardware reset occurs. The reset of the IOLock bit is done by hardware. for that, LL_SPI_DisableIOLock can not exist.

Reference Manual to LL API cross reference:

- CR1 IOLOCK LL_SPI_EnableIOLock

LL_I2S_IsEnabledIOLock

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledIOLock (SPI_TypeDef * SPIx)

Function description

Check if the the SPI_CFG2 register is locked.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 IOLOCK LL_I2S_IsEnabledIOLock

LL_I2S_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_I2S_SetTransferBitOrder (SPI_TypeDef * SPIx, uint32_t BitOrder)

Function description

Set Transfer Bit Order.

Parameters

- **SPIx:** SPI Instance
- **BitOrder:** This parameter can be one of the following values:
  - LL_I2S_LSB_FIRST
  - LL_I2S_MSB_FIRST

Return values

- **None:**

Notes

- This configuration can not be changed when I2S is enabled.

Reference Manual to LL API cross reference:

- CFG2 LSBFRST LL_I2S_SetTransferBitOrder

LL_I2S_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_I2S_GetTransferBitOrder (SPI_TypeDef * SPIx)

Function description

Get Transfer Bit Order.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_I2S_LSB_FIRST
  - LL_I2S_MSB_FIRST

Reference Manual to LL API cross reference:

- CFG2 LSBFRST LL_I2S_GetTransferBitOrder

LL_I2S_StartTransfer

Function name

__STATIC_INLINE void LL_I2S_StartTransfer (SPI_TypeDef * SPIx)

Function description

Start effective transfer on wire.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CSTART LL_I2S_StartTransfer

LL_I2S_IsActiveTransfer

Function name

__STATIC_INLINE uint32_t LL_I2S_IsActiveTransfer (SPI_TypeDef * SPIx)

Function description

Check if there is an unfinished transfer.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CR1 CSTART LL_I2S_IsTransferActive

LL_I2S_SetFIFOThreshold

Function name

__STATIC_INLINE void LL_I2S_SetFIFOThreshold (SPI_TypeDef * SPIx, uint32_t Threshold)

Function description

Set threshold of FIFO that triggers a transfer event.

Parameters

- **SPIx:** SPI Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_I2S_FIFO_TH_01DATA
  - LL_I2S_FIFO_TH_02DATA
  - LL_I2S_FIFO_TH_03DATA
  - LL_I2S_FIFO_TH_04DATA
  - LL_I2S_FIFO_TH_05DATA
  - LL_I2S_FIFO_TH_06DATA
  - LL_I2S_FIFO_TH_07DATA
  - LL_I2S_FIFO_TH_08DATA

Return values

- **None:**

Notes

- This configuration can not be changed when I2S is enabled.

Reference Manual to LL API cross reference:

- CFG1 FTHLV LL_I2S_SetFIFOThreshold

LL_I2S_GetFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_I2S_GetFIFOThreshold (SPI_TypeDef * SPIx)

Function description

Get threshold of FIFO that triggers a transfer event.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_I2S_FIFO_TH_01DATA
  - LL_I2S_FIFO_TH_02DATA
  - LL_I2S_FIFO_TH_03DATA
  - LL_I2S_FIFO_TH_04DATA
  - LL_I2S_FIFO_TH_05DATA
  - LL_I2S_FIFO_TH_06DATA
  - LL_I2S_FIFO_TH_07DATA
  - LL_I2S_FIFO_TH_08DATA

Reference Manual to LL API cross reference:

- CFG1 FTHLV LL_I2S_GetFIFOThreshold

LL_I2S_SetPrescalerLinear

Function name

__STATIC_INLINE void LL_I2S_SetPrescalerLinear (SPI_TypeDef * SPIx, uint32_t PrescalerLinear)

Function description

Set I2S linear prescaler.

Parameters

- **SPIx:** SPI Instance
- **PrescalerLinear:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Notes

- PrescalerLinear '1' is not authorized with parity LL_I2S_PRESCALER_PARITY_ODD

Reference Manual to LL API cross reference:

- I2SCFGR I2SDIV LL_I2S_SetPrescalerLinear

LL_I2S_GetPrescalerLinear

Function name

__STATIC_INLINE uint32_t LL_I2S_GetPrescalerLinear (SPI_TypeDef * SPIx)

Function description

Get I2S linear prescaler.

Parameters

- **SPIx:** SPI Instance

Return values

- **PrescalerLinear:** Value between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- I2SCFGR I2SDIV LL_I2S_GetPrescalerLinear

LL_I2S_SetPrescalerParity

Function name

__STATIC_INLINE void LL_I2S_SetPrescalerParity (SPI_TypeDef * SPIx, uint32_t PrescalerParity)

Function description

Set I2S parity prescaler.

Parameters

- **SPIx:** SPI Instance
- **PrescalerParity:** This parameter can be one of the following values:
  - LL_I2S_PRESCALER_PARITY_EVEN
  - LL_I2S_PRESCALER_PARITY_ODD

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR ODD LL_I2S_SetPrescalerParity

LL_I2S_GetPrescalerParity

Function name

__STATIC_INLINE uint32_t LL_I2S_GetPrescalerParity (SPI_TypeDef * SPIx)

Function description

Get I2S parity prescaler.

Parameters

- **SPIx:** SPI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_I2S_PRESCALER_PARITY_EVEN
  - LL_I2S_PRESCALER_PARITY_ODD

Reference Manual to LL API cross reference:

- I2SCFGR ODD LL_I2S_GetPrescalerParity

LL_I2S_EnableMasterClock

Function name

__STATIC_INLINE void LL_I2S_EnableMasterClock (SPI_TypeDef * SPIx)

Function description

Enable the Master Clock Output (Pin MCK)

Parameters

- **SPIx:** SPI Handle

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR MCKOE LL_I2S_EnableMasterClock

LL_I2S_DisableMasterClock

Function name

__STATIC_INLINE void LL_I2S_DisableMasterClock (SPI_TypeDef * SPIx)

Function description

Disable the Master Clock Output (Pin MCK)

Parameters

- **SPIx:** SPI Handle

Return values

- **None:**

Reference Manual to LL API cross reference:

- I2SCFGR MCKOE LL_I2S_DisableMasterClock

LL_I2S_IsEnabledMasterClock

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledMasterClock (SPI_TypeDef * SPIx)

Function description

Check if the master clock output (Pin MCK) is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- I2SCFGR MCKOE LL_I2S_IsEnabledMasterClock

LL_I2S_IsActiveFlag_RXP

Function name

__STATIC_INLINE uint32_t LL_I2S_IsActiveFlag_RXP (SPI_TypeDef * SPIx)

Function description

Check if there enough data in FIFO to read a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR RXP LL_I2S_IsActiveFlag_RXP

LL_I2S_IsActiveFlag_TXP

Function name

__STATIC_INLINE uint32_t LL_I2S_IsActiveFlag_TXP (SPI_TypeDef * SPIx)

Function description

Check if there enough space in FIFO to hold a full packet.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR TXP LL_I2S_IsActiveFlag_TXP

LL_I2S_IsActiveFlag_UDR

Function name

__STATIC_INLINE uint32_t LL_I2S_IsActiveFlag_UDR (SPI_TypeDef * SPIx)

Function description

Get Underrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- SR UDR LL_I2S_IsActiveFlag_UDR

LL_I2S_IsActiveFlag_OVR

Function name

__STATIC_INLINE uint32_t LL_I2S_IsActiveFlag_OVR (SPI_TypeDef * SPIx)

Function description

Get Overrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR OVR LL_I2S_IsActiveFlag_OVR

LL_I2S_IsActiveFlag_FRE

Function name

__STATIC_INLINE uint32_t LL_I2S_IsActiveFlag_FRE (SPI_TypeDef * SPIx)

Function description

Get TI Frame format error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TIFRE LL_I2S_IsActiveFlag_FRE

LL_I2S_ClearFlag_UDR

Function name

__STATIC_INLINE void LL_I2S_ClearFlag_UDR (SPI_TypeDef * SPIx)

Function description

Clear Underrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR UDRC LL_I2S_ClearFlag_UDR

LL_I2S_ClearFlag_OVR

Function name

__STATIC_INLINE void LL_I2S_ClearFlag_OVR (SPI_TypeDef * SPIx)

Function description

Clear Overrun error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR OVRC LL_I2S_ClearFlag_OVR

LL_I2S_ClearFlag_FRE

Function name

__STATIC_INLINE void LL_I2S_ClearFlag_FRE (SPI_TypeDef * SPIx)

Function description

Clear Frame format error flag.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IFCR TIFREC LL_I2S_ClearFlag_FRE

LL_I2S_EnableIT_RXP

Function name

__STATIC_INLINE void LL_I2S_EnableIT_RXP (SPI_TypeDef * SPIx)

Function description

Enable Rx Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXPIE LL_I2S_EnableIT_RXP

LL_I2S_EnableIT_TXP

Function name

__STATIC_INLINE void LL_I2S_EnableIT_TXP (SPI_TypeDef * SPIx)

Function description

Enable Tx Packet space available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXPIE LL_I2S_EnableIT_TXP

LL_I2S_EnableIT_UDR

Function name

__STATIC_INLINE void LL_I2S_EnableIT_UDR (SPI_TypeDef * SPIx)

Function description

Enable Underrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UDRIE LL_I2S_EnableIT_UDR

LL_I2S_EnableIT_OVR

Function name

__STATIC_INLINE void LL_I2S_EnableIT_OVR (SPI_TypeDef * SPIx)

Function description

Enable Overrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_I2S_EnableIT_OVR

LL_I2S_EnableIT_FRE

Function name

__STATIC_INLINE void LL_I2S_EnableIT_FRE (SPI_TypeDef * SPIx)

Function description

Enable TI Frame Format Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIFREIE LL_I2S_EnableIT_FRE

LL_I2S_DisableIT_RXP

Function name

__STATIC_INLINE void LL_I2S_DisableIT_RXP (SPI_TypeDef * SPIx)

Function description

Disable Rx Packet available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXPIE LL_I2S_DisableIT_RXP

LL_I2S_DisableIT_TXP

Function name

__STATIC_INLINE void LL_I2S_DisableIT_TXP (SPI_TypeDef * SPIx)

Function description

Disable Tx Packet space available IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXPIE LL_I2S_DisableIT_TXP

LL_I2S_DisableIT_UDR

Function name

__STATIC_INLINE void LL_I2S_DisableIT_UDR (SPI_TypeDef * SPIx)

Function description

Disable Underrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER UDRIE LL_I2S_DisableIT_UDR

LL_I2S_DisableIT_OVR

Function name

__STATIC_INLINE void LL_I2S_DisableIT_OVR (SPI_TypeDef * SPIx)

Function description

Disable Overrun IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER OVRIE LL_I2S_DisableIT_OVR

LL_I2S_DisableIT_FRE

Function name

__STATIC_INLINE void LL_I2S_DisableIT_FRE (SPI_TypeDef * SPIx)

Function description

Disable TI Frame Format Error IT.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIFREIE LL_I2S_DisableIT_FRE

LL_I2S_IsEnabledIT_RXP

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledIT_RXP (SPI_TypeDef * SPIx)

Function description

Check if Rx Packet available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER RXPIE LL_I2S_IsEnabledIT_RXP

LL_I2S_IsEnabledIT_TXP

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledIT_TXP (SPI_TypeDef * SPIx)

Function description

Check if Tx Packet space available IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TXPIE LL_I2S_IsEnabledIT_TXP

LL_I2S_IsEnabledIT_UDR

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledIT_UDR (SPI_TypeDef * SPIx)

Function description

Check if Underrun IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER UDRIE LL_I2S_IsEnabledIT_UDR

LL_I2S_IsEnabledIT_OVR

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledIT_OVR (SPI_TypeDef * SPIx)

Function description

Check if Overrun IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER OVRIE LL_I2S_IsEnabledIT_OVR

LL_I2S_IsEnabledIT_FRE

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledIT_FRE (SPI_TypeDef * SPIx)

Function description

Check if TI Frame Format Error IT is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- IER TIFREIE LL_I2S_IsEnabledIT_FRE

LL_I2S_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_I2S_EnableDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Enable DMA Rx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_I2S_EnableDMAReq_RX

LL_I2S_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_I2S_DisableDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Disable DMA Rx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_I2S_DisableDMAReq_RX

LL_I2S_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledDMAReq_RX (SPI_TypeDef * SPIx)

Function description

Check if DMA Rx is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG1 RXDMAEN LL_I2S_IsEnabledDMAReq_RX

LL_I2S_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_I2S_EnableDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Enable DMA Tx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_I2S_EnableDMAReq_TX

LL_I2S_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_I2S_DisableDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Disable DMA Tx.

Parameters

- **SPIx:** SPI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_I2S_DisableDMAReq_TX

LL_I2S_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_I2S_IsEnabledDMAReq_TX (SPI_TypeDef * SPIx)

Function description

Check if DMA Tx is enabled.

Parameters

- **SPIx:** SPI Instance

Return values

- **State:** of bit (1 or 0)

Reference Manual to LL API cross reference:

- CFG1 TXDMAEN LL_I2S_IsEnabledDMAReq_TX

LL_I2S_ReceiveData16

Function name

__STATIC_INLINE uint16_t LL_I2S_ReceiveData16 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_I2S_ReceiveData16

LL_I2S_ReceiveData32

Function name

__STATIC_INLINE uint32_t LL_I2S_ReceiveData32 (SPI_TypeDef * SPIx)

Function description

Read Data Register.

Parameters

- **SPIx:** SPI Instance

Return values

- **0..0xFFFFFFFF:**

Reference Manual to LL API cross reference:

- RXDR . LL_I2S_ReceiveData32

LL_I2S_TransmitData16

Function name

__STATIC_INLINE void LL_I2S_TransmitData16 (SPI_TypeDef * SPIx, uint16_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_I2S_TransmitData16

LL_I2S_TransmitData32

Function name

__STATIC_INLINE void LL_I2S_TransmitData32 (SPI_TypeDef * SPIx, uint32_t TxData)

Function description

Write Data Register.

Parameters

- **SPIx:** SPI Instance
- **TxData:** 0..0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TXDR . LL_I2S_TransmitData32

LL_I2S_DeInit

Function name

ErrorStatus LL_I2S_DeInit (SPI_TypeDef * SPIx)

Function description

De-initialize the SPI/I2S registers to their default reset values.

Parameters

- **SPIx:** SPI Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: SPI registers are de-initialized
  - ERROR: SPI registers are not de-initialized

LL_I2S_Init

Function name

ErrorStatus LL_I2S_Init (SPI_TypeDef * SPIx, LL_I2S_InitTypeDef * I2S_InitStruct)

Function description

Initializes the SPI/I2S registers according to the specified parameters in I2S_InitStruct.

Parameters

- **SPIx:** SPI Instance
- **I2S_InitStruct:** pointer to a LL_I2S_InitTypeDef structure

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: SPI registers are Initialized
  - ERROR: SPI registers are not Initialized

Notes

- As some bits in I2S configuration registers can only be written when the SPI is disabled (SPI_CR1_SPE bit =0), SPI IP should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.
- I2S (SPI) source clock must be ready before calling this function. Otherwise will results in wrong programming.

LL_I2S_StructInit

Function name

void LL_I2S_StructInit (LL_I2S_InitTypeDef * I2S_InitStruct)

Function description

Set each LL_I2S_InitTypeDef field to default value.

Parameters

- **I2S_InitStruct:** pointer to a LL_I2S_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_I2S_ConfigPrescaler

Function name

void LL_I2S_ConfigPrescaler (SPI_TypeDef * SPIx, uint32_t PrescalerLinear, uint32_t PrescalerParity)

Function description

Set linear and parity prescaler.

Parameters

- **SPIx:** SPI Instance
- **PrescalerLinear:** Value between Min_Data=0x00 and Max_Data=0xFF
- **PrescalerParity:** This parameter can be one of the following values:
  - LL_I2S_PRESCALER_PARITY_EVEN
  - LL_I2S_PRESCALER_PARITY_ODD

Return values

- **None:**

Notes

- To calculate value of PrescalerLinear(I2SDIV[7:0] bits) and PrescalerParity(ODD bit) Check Audio frequency table and formulas inside Reference Manual (SPI/I2S).
- PrescalerLinear '1' is not authorized with parity LL_I2S_PRESCALER_PARITY_ODD

Common Write and read registers Macros

LL_SPI_WriteReg

Description:

- Write a value in SPI register.

Parameters:

- __INSTANCE__: SPI Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_SPI_ReadReg

Description:

- Read a value in SPI register.

Parameters:

- __INSTANCE__: SPI Instance
- __REG__: Register to be read

Return value:

- Register: value

124 LL SWPMI Generic Driver

124.1 SWPMI Firmware driver registers structures

124.1.1 LL_SWPMI_InitTypeDef

LL_SWPMI_InitTypeDef is defined in the stm32h7xx_ll_swpmi.h

Data Fields

- ***uint32_t VoltageClass***
- ***uint32_t BitRatePrescaler***
- ***uint32_t TxBufferingMode***
- ***uint32_t RxBufferingMode***

Field Documentation

- ***uint32_t LL_SWPMI_InitTypeDef::VoltageClass***

  Specifies the SWP Voltage Class. This parameter can be a value of ***SWPMI_LL_EC_VOLTAGE_CLASS***This feature can be modified afterwards using unitary function **LL_SWPMI_SetVoltageClass**.
- ***uint32_t LL_SWPMI_InitTypeDef::BitRatePrescaler***

  Specifies the SWPMI bitrate prescaler. This parameter must be a number between Min_Data=0 and Max_Data=255U.The value can be calculated thanks to helper macro **__LL_SWPMI_CALC_BITRATE_PRESCALER**This feature can be modified afterwards using unitary function **LL_SWPMI_SetBitRatePrescaler**.
- ***uint32_t LL_SWPMI_InitTypeDef::TxBufferingMode***

  Specifies the transmission buffering mode. This parameter can be a value of ***SWPMI_LL_EC_SW_BUFFER_TX***This feature can be modified afterwards using unitary function **LL_SWPMI_SetTransmissionMode**.
- ***uint32_t LL_SWPMI_InitTypeDef::RxBufferingMode***

  Specifies the reception buffering mode. This parameter can be a value of ***SWPMI_LL_EC_SW_BUFFER_RX***This feature can be modified afterwards using unitary function **LL_SWPMI_SetReceptionMode**.

124.2 SWPMI Firmware driver API description

The following section lists the various functions of the SWPMI library.

124.2.1 Detailed description of functions

LL_SWPMI_SetReceptionMode

Function name

__STATIC_INLINE void LL_SWPMI_SetReceptionMode (SWPMI_TypeDef * SWPMIx, uint32_t RxBufferingMode)

Function description

Set Reception buffering mode.

Parameters

- **SWPMIx:** SWPMI Instance
- **RxBufferingMode:** This parameter can be one of the following values:
  - LL_SWPMI_SW_BUFFER_RX_SINGLE
  - LL_SWPMI_SW_BUFFER_RX_MULTI

Return values

- **None:**

Notes

- If Multi software buffer mode is chosen, RXDMA bits must also be set.

Reference Manual to LL API cross reference:

- CR RXMODE LL_SWPMI_SetReceptionMode

LL_SWPMI_GetReceptionMode

Function name

__STATIC_INLINE uint32_t LL_SWPMI_GetReceptionMode (SWPMI_TypeDef * SWPMIx)

Function description

Get Reception buffering mode.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SWPMI_SW_BUFFER_RX_SINGLE
  - LL_SWPMI_SW_BUFFER_RX_MULTI

Reference Manual to LL API cross reference:

- CR RXMODE LL_SWPMI_GetReceptionMode

LL_SWPMI_SetTransmissionMode

Function name

__STATIC_INLINE void LL_SWPMI_SetTransmissionMode (SWPMI_TypeDef * SWPMIx, uint32_t TxBufferingMode)

Function description

Set Transmission buffering mode.

Parameters

- **SWPMIx:** SWPMI Instance
- **TxBufferingMode:** This parameter can be one of the following values:
  - LL_SWPMI_SW_BUFFER_TX_SINGLE
  - LL_SWPMI_SW_BUFFER_TX_MULTI

Return values

- **None:**

Notes

- If Multi software buffer mode is chosen, TXDMA bits must also be set.

Reference Manual to LL API cross reference:

- CR TXMODE LL_SWPMI_SetTransmissionMode

LL_SWPMI_GetTransmissionMode

Function name

__STATIC_INLINE uint32_t LL_SWPMI_GetTransmissionMode (SWPMI_TypeDef * SWPMIx)

Function description

Get Transmission buffering mode.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SWPMI_SW_BUFFER_TX_SINGLE
  - LL_SWPMI_SW_BUFFER_TX_MULTI

Reference Manual to LL API cross reference:

- CR TXMODE LL_SWPMI_GetTransmissionMode

LL_SWPMI_EnableLoopback

Function name

__STATIC_INLINE void LL_SWPMI_EnableLoopback (SWPMI_TypeDef * SWPMIx)

Function description

Enable loopback mode.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR LPBK LL_SWPMI_EnableLoopback

LL_SWPMI_DisableLoopback

Function name

__STATIC_INLINE void LL_SWPMI_DisableLoopback (SWPMI_TypeDef * SWPMIx)

Function description

Disable loopback mode.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR LPBK LL_SWPMI_DisableLoopback

LL_SWPMI_EnableTransceiver

Function name

__STATIC_INLINE void LL_SWPMI_EnableTransceiver (SWPMI_TypeDef * SWPMIx)

Function description

Enable SWPMI transceiver.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Notes

- SWPMI_IO pin is controlled by SWPMI

Reference Manual to LL API cross reference:

- CR SWPEN LL_SWPMI_EnableTransceiver

LL_SWPMI_DisableTransceiver

Function name

__STATIC_INLINE void LL_SWPMI_DisableTransceiver (SWPMI_TypeDef * SWPMIx)

Function description

Disable SWPMI transceiver.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Notes

- SWPMI_IO pin is controlled by GPIO controller

Reference Manual to LL API cross reference:

- CR SWPEN LL_SWPMI_DisableTransceiver

LL_SWPMI_IsEnabledTransceiver

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledTransceiver (SWPMI_TypeDef * SWPMIx)

Function description

Check if SWPMI transceiver is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR SWPEN LL_SWPMI_IsEnabledTransceiver

LL_SWPMI_Activate

Function name

__STATIC_INLINE void LL_SWPMI_Activate (SWPMI_TypeDef * SWPMIx)

Function description

Activate Single wire protocol bus (SUSPENDED or ACTIVATED state)

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Notes

- SWP bus stays in the ACTIVATED state as long as there is a communication with the slave, either in transmission or in reception. The SWP bus switches back to the SUSPENDED state as soon as there is no more transmission or reception activity, after 7 idle bits.

Reference Manual to LL API cross reference:

- CR SWPACT LL_SWPMI_Activate

LL_SWPMI_IsActivated

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActivated (SWPMI_TypeDef * SWPMIx)

Function description

Check if Single wire protocol bus is in ACTIVATED state.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR SWPACT LL_SWPMI_Activate

LL_SWPMI_Deactivate

Function name

__STATIC_INLINE void LL_SWPMI_Deactivate (SWPMI_TypeDef * SWPMIx)

Function description

Deactivate immediately Single wire protocol bus (immediate transition to DEACTIVATED state)

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR SWPACT LL_SWPMI_Deactivate

LL_SWPMI_RequestDeactivation

Function name

__STATIC_INLINE void LL_SWPMI_RequestDeactivation (SWPMI_TypeDef * SWPMIx)

Function description

Request a deactivation of Single wire protocol bus (request to go in DEACTIVATED state if no resume from slave)

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR DEACT LL_SWPMI_RequestDeactivation

LL_SWPMI_SetBitRatePrescaler

Function name

__STATIC_INLINE void LL_SWPMI_SetBitRatePrescaler (SWPMI_TypeDef * SWPMIx, uint32_t BitRatePrescaler)

Function description

Set Bitrate prescaler SWPMI_freq = SWPMI_clk / (((BitRate) + 1) * 4)

Parameters

- **SWPMIx:** SWPMI Instance
- **BitRatePrescaler:** A number between Min_Data=0 and Max_Data=255U

Return values

- **None:**

Reference Manual to LL API cross reference:

- BRR BR LL_SWPMI_SetBitRatePrescaler

LL_SWPMI_GetBitRatePrescaler

Function name

__STATIC_INLINE uint32_t LL_SWPMI_GetBitRatePrescaler (SWPMI_TypeDef * SWPMIx)

Function description

Get Bitrate prescaler.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **A:** number between Min_Data=0 and Max_Data=255U

Reference Manual to LL API cross reference:

- BRR BR LL_SWPMI_GetBitRatePrescaler

LL_SWPMI_SetVoltageClass

Function name

__STATIC_INLINE void LL_SWPMI_SetVoltageClass (SWPMI_TypeDef * SWPMIx, uint32_t VoltageClass)

Function description

Set SWP Voltage Class.

Parameters

- **SWPMIx:** SWPMI Instance
- **VoltageClass:** This parameter can be one of the following values:
  - LL_SWPMI_VOLTAGE_CLASS_C
  - LL_SWPMI_VOLTAGE_CLASS_B

Return values

- **None:**

Reference Manual to LL API cross reference:

- OR CLASS LL_SWPMI_SetVoltageClass

LL_SWPMI_GetVoltageClass

Function name

__STATIC_INLINE uint32_t LL_SWPMI_GetVoltageClass (SWPMI_TypeDef * SWPMIx)

Function description

Get SWP Voltage Class.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_SWPMI_VOLTAGE_CLASS_C
  - LL_SWPMI_VOLTAGE_CLASS_B

Reference Manual to LL API cross reference:

- OR CLASS LL_SWPMI_GetVoltageClass

LL_SWPMI_IsActiveFlag_RXBF

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_RXBF (SWPMI_TypeDef * SWPMIx)

Function description

Check if the last word of the frame under reception has arrived in SWPMI_RDR.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXBFF LL_SWPMI_IsActiveFlag_RXBF

LL_SWPMI_IsActiveFlag_TXBE

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_TXBE (SWPMI_TypeDef * SWPMIx)

Function description

Check if Frame transmission buffer has been emptied.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXBEF LL_SWPMI_IsActiveFlag_TXBE

LL_SWPMI_IsActiveFlag_RXBER

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_RXBER (SWPMI_TypeDef * SWPMIx)

Function description

Check if CRC error in reception has been detected.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXBERF LL_SWPMI_IsActiveFlag_RXBER

LL_SWPMI_IsActiveFlag_RXOVR

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_RXOVR (SWPMI_TypeDef * SWPMIx)

Function description

Check if Overrun in reception has been detected.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXOVRF LL_SWPMI_IsActiveFlag_RXOVR

LL_SWPMI_IsActiveFlag_TXUNR

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_TXUNR (SWPMI_TypeDef * SWPMIx)

Function description

Check if underrun error in transmission has been detected.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXUNRF LL_SWPMI_IsActiveFlag_TXUNR

LL_SWPMI_IsActiveFlag_RXNE

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_RXNE (SWPMI_TypeDef * SWPMIx)

Function description

Check if Receive data register not empty (it means that Received data is ready to be read in the SWPMI_RDR register)

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RXNE LL_SWPMI_IsActiveFlag_RXNE

LL_SWPMI_IsActiveFlag_TXE

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_TXE (SWPMI_TypeDef * SWPMIx)

Function description

Check if Transmit data register is empty (it means that Data written in transmit data register SWPMI_TDR has been transmitted and SWPMI_TDR can be written to again)

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TXE LL_SWPMI_IsActiveFlag_TXE

LL_SWPMI_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_TC (SWPMI_TypeDef * SWPMIx)

Function description

Check if Both transmission and reception are completed and SWP is switched to the SUSPENDED state.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TCF LL_SWPMI_IsActiveFlag_TC

LL_SWPMI_IsActiveFlag_SR

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_SR (SWPMI_TypeDef * SWPMIx)

Function description

Check if a Resume by slave state has been detected during the SWP bus SUSPENDED state.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SRF LL_SWPMI_IsActiveFlag_SR

LL_SWPMI_IsActiveFlag_SUSP

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_SUSP (SWPMI_TypeDef * SWPMIx)

Function description

Check if SWP bus is in SUSPENDED or DEACTIVATED state.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SUSP LL_SWPMI_IsActiveFlag_SUSP

LL_SWPMI_IsActiveFlag_DEACT

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_DEACT (SWPMI_TypeDef * SWPMIx)

Function description

Check if SWP bus is in DEACTIVATED state.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR DEACTF LL_SWPMI_IsActiveFlag_DEACT

LL_SWPMI_IsActiveFlag_RDYF

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsActiveFlag_RDYF (SWPMI_TypeDef * SWPMIx)

Function description

Check if SWPMI transceiver is ready.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RDYF LL_SWPMI_IsActiveFlag_RDYF

LL_SWPMI_ClearFlag_RXBF

Function name

__STATIC_INLINE void LL_SWPMI_ClearFlag_RXBF (SWPMI_TypeDef * SWPMIx)

Function description

Clear receive buffer full flag.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CRXBFF LL_SWPMI_ClearFlag_RXBF

LL_SWPMI_ClearFlag_TXBE

Function name

__STATIC_INLINE void LL_SWPMI_ClearFlag_TXBE (SWPMI_TypeDef * SWPMIx)

Function description

Clear transmit buffer empty flag.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CTXBEF LL_SWPMI_ClearFlag_TXBE

LL_SWPMI_ClearFlag_RXBER

Function name

__STATIC_INLINE void LL_SWPMI_ClearFlag_RXBER (SWPMI_TypeDef * SWPMIx)

Function description

Clear receive CRC error flag.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CRXBERF LL_SWPMI_ClearFlag_RXBER

LL_SWPMI_ClearFlag_RXOVR

Function name

__STATIC_INLINE void LL_SWPMI_ClearFlag_RXOVR (SWPMI_TypeDef * SWPMIx)

Function description

Clear receive overrun error flag.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CRXOVRF LL_SWPMI_ClearFlag_RXOVR

LL_SWPMI_ClearFlag_TXUNR

Function name

__STATIC_INLINE void LL_SWPMI_ClearFlag_TXUNR (SWPMI_TypeDef * SWPMIx)

Function description

Clear transmit underrun error flag.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CTXUNRF LL_SWPMI_ClearFlag_TXUNR

LL_SWPMI_ClearFlag_TC

Function name

__STATIC_INLINE void LL_SWPMI_ClearFlag_TC (SWPMI_TypeDef * SWPMIx)

Function description

Clear transfer complete flag.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CTCF LL_SWPMI_ClearFlag_TC

LL_SWPMI_ClearFlag_SR

Function name

__STATIC_INLINE void LL_SWPMI_ClearFlag_SR (SWPMI_TypeDef * SWPMIx)

Function description

Clear slave resume flag.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CSRF LL_SWPMI_ClearFlag_SR

LL_SWPMI_ClearFlag_RDY

Function name

__STATIC_INLINE void LL_SWPMI_ClearFlag_RDY (SWPMI_TypeDef * SWPMIx)

Function description

Clear SWPMI transceiver ready flag.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ISR CRDYF LL_SWPMI_ClearFlag_RDY

LL_SWPMI_EnableIT_RDY

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_RDY (SWPMI_TypeDef * SWPMIx)

Function description

Enable SWPMI transceiver ready interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RDYIE LL_SWPMI_EnableIT_RDY

LL_SWPMI_EnableIT_SR

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_SR (SWPMI_TypeDef * SWPMIx)

Function description

Enable Slave resume interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER SRIE LL_SWPMI_EnableIT_SR

LL_SWPMI_EnableIT_TC

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_TC (SWPMI_TypeDef * SWPMIx)

Function description

Enable Transmit complete interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TCIE LL_SWPMI_EnableIT_TC

LL_SWPMI_EnableIT_TX

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_TX (SWPMI_TypeDef * SWPMIx)

Function description

Enable Transmit interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIE LL_SWPMI_EnableIT_TX

LL_SWPMI_EnableIT_RX

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_RX (SWPMI_TypeDef * SWPMIx)

Function description

Enable Receive interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RIE LL_SWPMI_EnableIT_RX

LL_SWPMI_EnableIT_TXUNR

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_TXUNR (SWPMI_TypeDef * SWPMIx)

Function description

Enable Transmit underrun error interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXUNRIE LL_SWPMI_EnableIT_TXUNR

LL_SWPMI_EnableIT_RXOVR

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_RXOVR (SWPMI_TypeDef * SWPMIx)

Function description

Enable Receive overrun error interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXOVRIE LL_SWPMI_EnableIT_RXOVR

LL_SWPMI_EnableIT_RXBER

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_RXBER (SWPMI_TypeDef * SWPMIx)

Function description

Enable Receive CRC error interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXBERIE LL_SWPMI_EnableIT_RXBER

LL_SWPMI_EnableIT_TXBE

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_TXBE (SWPMI_TypeDef * SWPMIx)

Function description

Enable Transmit buffer empty interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXBEIE LL_SWPMI_EnableIT_TXBE

LL_SWPMI_EnableIT_RXBF

Function name

__STATIC_INLINE void LL_SWPMI_EnableIT_RXBF (SWPMI_TypeDef * SWPMIx)

Function description

Enable Receive buffer full interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXBFIE LL_SWPMI_EnableIT_RXBF

LL_SWPMI_DisableIT_RDY

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_RDY (SWPMI_TypeDef * SWPMIx)

Function description

Disable SWPMI transceiver ready interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RDYIE LL_SWPMI_DisableIT_RDY

LL_SWPMI_DisableIT_SR

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_SR (SWPMI_TypeDef * SWPMIx)

Function description

Disable Slave resume interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER SRIE LL_SWPMI_DisableIT_SR

LL_SWPMI_DisableIT_TC

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_TC (SWPMI_TypeDef * SWPMIx)

Function description

Disable Transmit complete interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TCIE LL_SWPMI_DisableIT_TC

LL_SWPMI_DisableIT_TX

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_TX (SWPMI_TypeDef * SWPMIx)

Function description

Disable Transmit interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TIE LL_SWPMI_DisableIT_TX

LL_SWPMI_DisableIT_RX

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_RX (SWPMI_TypeDef * SWPMIx)

Function description

Disable Receive interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RIE LL_SWPMI_DisableIT_RX

LL_SWPMI_DisableIT_TXUNR

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_TXUNR (SWPMI_TypeDef * SWPMIx)

Function description

Disable Transmit underrun error interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXUNRIE LL_SWPMI_DisableIT_TXUNR

LL_SWPMI_DisableIT_RXOVR

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_RXOVR (SWPMI_TypeDef * SWPMIx)

Function description

Disable Receive overrun error interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXOVRIE LL_SWPMI_DisableIT_RXOVR

LL_SWPMI_DisableIT_RXBER

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_RXBER (SWPMI_TypeDef * SWPMIx)

Function description

Disable Receive CRC error interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXBERIE LL_SWPMI_DisableIT_RXBER

LL_SWPMI_DisableIT_TXBE

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_TXBE (SWPMI_TypeDef * SWPMIx)

Function description

Disable Transmit buffer empty interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER TXBEIE LL_SWPMI_DisableIT_TXBE

LL_SWPMI_DisableIT_RXBF

Function name

__STATIC_INLINE void LL_SWPMI_DisableIT_RXBF (SWPMI_TypeDef * SWPMIx)

Function description

Disable Receive buffer full interrupt.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- IER RXBFIE LL_SWPMI_DisableIT_RXBF

LL_SWPMI_IsEnabledIT_RDY

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_RDY (SWPMI_TypeDef * SWPMIx)

Function description

Check if SWPMI transceiver ready interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER RDYIE LL_SWPMI_IsEnabledIT_RDY

LL_SWPMI_IsEnabledIT_SR

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_SR (SWPMI_TypeDef * SWPMIx)

Function description

Check if Slave resume interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER SRIE LL_SWPMI_IsEnabledIT_SR

LL_SWPMI_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_TC (SWPMI_TypeDef * SWPMIx)

Function description

Check if Transmit complete interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER TCIE LL_SWPMI_IsEnabledIT_TC

LL_SWPMI_IsEnabledIT_TX

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_TX (SWPMI_TypeDef * SWPMIx)

Function description

Check if Transmit interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER TIE LL_SWPMI_IsEnabledIT_TX

LL_SWPMI_IsEnabledIT_RX

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_RX (SWPMI_TypeDef * SWPMIx)

Function description

Check if Receive interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER RIE LL_SWPMI_IsEnabledIT_RX

LL_SWPMI_IsEnabledIT_TXUNR

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_TXUNR (SWPMI_TypeDef * SWPMIx)

Function description

Check if Transmit underrun error interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER TXUNRIE LL_SWPMI_IsEnabledIT_TXUNR

LL_SWPMI_IsEnabledIT_RXOVR

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_RXOVR (SWPMI_TypeDef * SWPMIx)

Function description

Check if Receive overrun error interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER RXOVRIE LL_SWPMI_IsEnabledIT_RXOVR

LL_SWPMI_IsEnabledIT_RXBER

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_RXBER (SWPMI_TypeDef * SWPMIx)

Function description

Check if Receive CRC error interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER RXBERIE LL_SWPMI_IsEnabledIT_RXBER

LL_SWPMI_IsEnabledIT_TXBE

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_TXBE (SWPMI_TypeDef * SWPMIx)

Function description

Check if Transmit buffer empty interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER TXBEIE LL_SWPMI_IsEnabledIT_TXBE

LL_SWPMI_IsEnabledIT_RXBF

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledIT_RXBF (SWPMI_TypeDef * SWPMIx)

Function description

Check if Receive buffer full interrupt is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- IER RXBFIE LL_SWPMI_IsEnabledIT_RXBF

LL_SWPMI_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_SWPMI_EnableDMAReq_RX (SWPMI_TypeDef * SWPMIx)

Function description

Enable DMA mode for reception.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RXDMA LL_SWPMI_EnableDMAReq_RX

LL_SWPMI_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_SWPMI_DisableDMAReq_RX (SWPMI_TypeDef * SWPMIx)

Function description

Disable DMA mode for reception.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR RXDMA LL_SWPMI_DisableDMAReq_RX

LL_SWPMI_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledDMAReq_RX (SWPMI_TypeDef * SWPMIx)

Function description

Check if DMA mode for reception is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR RXDMA LL_SWPMI_IsEnabledDMAReq_RX

LL_SWPMI_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_SWPMI_EnableDMAReq_TX (SWPMI_TypeDef * SWPMIx)

Function description

Enable DMA mode for transmission.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TXDMA LL_SWPMI_EnableDMAReq_TX

LL_SWPMI_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_SWPMI_DisableDMAReq_TX (SWPMI_TypeDef * SWPMIx)

Function description

Disable DMA mode for transmission.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR TXDMA LL_SWPMI_DisableDMAReq_TX

LL_SWPMI_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_SWPMI_IsEnabledDMAReq_TX (SWPMI_TypeDef * SWPMIx)

Function description

Check if DMA mode for transmission is enabled.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR TXDMA LL_SWPMI_IsEnabledDMAReq_TX

LL_SWPMI_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_SWPMI_DMA_GetRegAddr (SWPMI_TypeDef * SWPMIx, uint32_t Direction)

Function description

Get the data register address used for DMA transfer.

Parameters

- **SWPMIx:** SWPMI Instance
- **Direction:** This parameter can be one of the following values:
  - LL_SWPMI_DMA_REG_DATA_TRANSMIT
  - LL_SWPMI_DMA_REG_DATA_RECEIVE

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- TDR TD LL_SWPMI_DMA_GetRegAddr
- RDR RD LL_SWPMI_DMA_GetRegAddr

LL_SWPMI_GetReceiveFrameLength

Function name

__STATIC_INLINE uint32_t LL_SWPMI_GetReceiveFrameLength (SWPMI_TypeDef * SWPMIx)

Function description

Retrieve number of data bytes present in payload of received frame.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x1F

Reference Manual to LL API cross reference:

- RFL RFL LL_SWPMI_GetReceiveFrameLength

LL_SWPMI_TransmitData32

Function name

__STATIC_INLINE void LL_SWPMI_TransmitData32 (SWPMI_TypeDef * SWPMIx, uint32_t TxData)

Function description

Transmit Data Register.

Parameters

- **SWPMIx:** SWPMI Instance
- **TxData:** Value between Min_Data=0x00000000 and Max_Data=0xFFFFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TD LL_SWPMI_TransmitData32

LL_SWPMI_ReceiveData32

Function name

__STATIC_INLINE uint32_t LL_SWPMI_ReceiveData32 (SWPMI_TypeDef * SWPMIx)

Function description

Receive Data Register.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **Value:** between Min_Data=0x00000000 and Max_Data=0xFFFFFFFF

Reference Manual to LL API cross reference:

- RDR RD LL_SWPMI_ReceiveData32

LL_SWPMI_EnableTXBypass

Function name

__STATIC_INLINE void LL_SWPMI_EnableTXBypass (SWPMI_TypeDef * SWPMIx)

Function description

Enable SWP Transceiver Bypass.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Notes

- The external interface for SWPMI is SWPMI_IO (SWPMI_RX, SWPMI_TX and SWPMI_SUSPEND signals are not available on GPIOs)

Reference Manual to LL API cross reference:

- OR TBYP LL_SWPMI_EnableTXBypass

LL_SWPMI_DisableTXBypass

Function name

__STATIC_INLINE void LL_SWPMI_DisableTXBypass (SWPMI_TypeDef * SWPMIx)

Function description

Disable SWP Transceiver Bypass.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **None:**

Notes

- SWPMI_RX, SWPMI_TX and SWPMI_SUSPEND signals are available as alternate function on GPIOs. This configuration is selected to connect an external transceiver
- In SWPMI_IO bypass mode, SWPEN bit in SWPMI_CR register must be kept cleared

Reference Manual to LL API cross reference:

- OR TBYP LL_SWPMI_DisableTXBypass

LL_SWPMI_DeInit

Function name

ErrorStatus LL_SWPMI_DeInit (SWPMI_TypeDef * SWPMIx)

Function description

De-initialize the SWPMI peripheral registers to their default reset values.

Parameters

- **SWPMIx:** SWPMI Instance

Return values

- **An:** ErrorStatus enumeration value
  - SUCCESS: SWPMI registers are de-initialized
  - ERROR: Not applicable

LL_SWPMI_Init

Function name

ErrorStatus LL_SWPMI_Init (SWPMI_TypeDef * SWPMIx, LL_SWPMI_InitTypeDef * SWPMI_InitStruct)

Function description

Initialize the SWPMI peripheral according to the specified parameters in the SWPMI_InitStruct.

Parameters

- **SWPMIx:** SWPMI Instance
- **SWPMI_InitStruct:** pointer to a LL_SWPMI_InitTypeDef structure that contains the configuration information for the SWPMI peripheral.

Return values

- **An:** ErrorStatus enumeration value
  - SUCCESS: SWPMI registers are initialized
  - ERROR: SWPMI registers are not initialized

Notes

- As some bits in SWPMI configuration registers can only be written when the SWPMI is deactivated (SWPMI_CR_SWPACT bit = 0), the SWPMI peripheral should be in deactivated state prior calling this function. Otherwise, ERROR result will be returned.

LL_SWPMI_StructInit

Function name

void LL_SWPMI_StructInit (LL_SWPMI_InitTypeDef * SWPMI_InitStruct)

Function description

Set each LL_SWPMI_InitTypeDef field to default value.

Parameters

- **SWPMI_InitStruct:** pointer to a LL_SWPMI_InitTypeDef structure that contains the configuration information for the SWPMI peripheral.

Return values

- **None:**

124.3 SWPMI Firmware driver defines

The following section lists the various define and macros of the module.

124.3.1 SWPMI

SWPMI

Clear Flags Defines

LL_SWPMI_ICR_CRXBFF

Clear receive buffer full flag

LL_SWPMI_ICR_CTXBEF

Clear transmit buffer empty flag

LL_SWPMI_ICR_CRXBERF

Clear receive CRC error flag

LL_SWPMI_ICR_CRXOVRF

Clear receive overrun error flag

LL_SWPMI_ICR_CTXUNRF

Clear transmit underrun error flag

LL_SWPMI_ICR_CTCF

Clear transfer complete flag

LL_SWPMI_ICR_CSRF

Clear slave resume flag

DMA register data

LL_SWPMI_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_SWPMI_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

Get Flags Defines

LL_SWPMI_ISR_RXBFF

Receive buffer full flag

LL_SWPMI_ISR_TXBEF

Transmit buffer empty flag

LL_SWPMI_ISR_RXBERF

Receive CRC error flag

LL_SWPMI_ISR_RXOVRF

Receive overrun error flag

LL_SWPMI_ISR_TXUNRF

Transmit underrun error flag

LL_SWPMI_ISR_RXNE

Receive data register not empty

LL_SWPMI_ISR_TXE

Transmit data register empty

LL_SWPMI_ISR_TCF

Transfer complete flag

LL_SWPMI_ISR_SRF

Slave resume flag

LL_SWPMI_ISR_SUSP

SUSPEND flag

LL_SWPMI_ISR_DEACTF

DEACTIVATED flag

IT Defines

LL_SWPMI_IER_SRIE

Slave resume interrupt enable

LL_SWPMI_IER_TCIE

Transmit complete interrupt enable

LL_SWPMI_IER_TIE

Transmit interrupt enable

LL_SWPMI_IER_RIE

Receive interrupt enable

LL_SWPMI_IER_TXUNRIE

Transmit underrun error interrupt enable

LL_SWPMI_IER_RXOVRIE

Receive overrun error interrupt enable

LL_SWPMI_IER_RXBERIE

Receive CRC error interrupt enable

LL_SWPMI_IER_TXBEIE

Transmit buffer empty interrupt enable

LL_SWPMI_IER_RXBFIE

Receive buffer full interrupt enable

SW BUFFER RX

LL_SWPMI_SW_BUFFER_RX_SINGLE

Single software buffer mode for reception

LL_SWPMI_SW_BUFFER_RX_MULTI

Multi software buffermode for reception

SW BUFFER TX

LL_SWPMI_SW_BUFFER_TX_SINGLE

Single software buffer mode for transmission

LL_SWPMI_SW_BUFFER_TX_MULTI

Multi software buffermode for transmission

VOLTAGE CLASS

LL_SWPMI_VOLTAGE_CLASS_C

SWPMI_IO uses directly VDD voltage to operate in class C

LL_SWPMI_VOLTAGE_CLASS_B

SWPMI_IO uses an internal voltage regulator to operate in class B

Bit rate calculation helper Macros

__LL_SWPMI_CALC_BITRATE_PRESCALER

Description:

- Helper macro to calculate bit rate value to set in BRR register (

Parameters:

- __FSWP__: Within the following range: from 100 Kbit/s up to 2Mbit/s (in bit/s)
- __FSWPCLK__: PCLK or HSI frequency (in Hz)

Return value:

- Bitrate: prescaler (BRR register)

Notes:

- ex: __LL_SWPMI_CALC_BITRATE_PRESCALER(2000000, 80000000);

Common Write and read registers Macros

LL_SWPMI_WriteReg

Description:

- Write a value in SWPMI register.

Parameters:

- __INSTANCE__: SWPMI Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_SWPMI_ReadReg

Description:

- Read a value in SWPMI register.

Parameters:

- __INSTANCE__: SWPMI Instance
- __REG__: Register to be read

Return value:

- Register: value

125 LL SYSTEM Generic Driver

125.1 SYSTEM Firmware driver API description

The following section lists the various functions of the SYSTEM library.

125.1.1 Detailed description of functions

LL_SYSCFG_SetPHYInterface

Function name

__STATIC_INLINE void LL_SYSCFG_SetPHYInterface (uint32_t Interface)

Function description

Select Ethernet PHY interface.

Parameters

- **Interface:** This parameter can be one of the following values:
  - LL_SYSCFG_ETH_MII
  - LL_SYSCFG_ETH_RMII

Return values

- **None:**

Reference Manual to LL API cross reference:

- PMCR EPIS_SEL LL_SYSCFG_SetPHYInterface

LL_SYSCFG_GetPHYInterface

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPHYInterface (void)

Function description

Get Ethernet PHY interface.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_ETH_MII
  - LL_SYSCFG_ETH_RMII

Reference Manual to LL API cross reference:

- PMCR EPIS_SEL LL_SYSCFG_GetPHYInterface

LL_SYSCFG_OpenAnalogSwitch

Function name

__STATIC_INLINE void LL_SYSCFG_OpenAnalogSwitch (uint32_t AnalogSwitch)

Function description

Open an Analog Switch.

Parameters

- **AnalogSwitch:** This parameter can be one of the following values:
  - LL_SYSCFG_ANALOG_SWITCH_PA0 : PA0 analog switch
  - LL_SYSCFG_ANALOG_SWITCH_PA1: PA1 analog switch
  - LL_SYSCFG_ANALOG_SWITCH_PC2 : PC2 analog switch
  - LL_SYSCFG_ANALOG_SWITCH_PC3: PC3 analog switch

Return values

- **None:**

Reference Manual to LL API cross reference:

- PMCR PA0SO LL_SYSCFG_OpenAnalogSwitch
- PMCR PA1SO LL_SYSCFG_OpenAnalogSwitch
- PMCR PC2SO LL_SYSCFG_OpenAnalogSwitch
- PMCR PC3SO LL_SYSCFG_OpenAnalogSwitch

LL_SYSCFG_CloseAnalogSwitch

Function name

__STATIC_INLINE void LL_SYSCFG_CloseAnalogSwitch (uint32_t AnalogSwitch)

Function description

Close an Analog Switch.

Parameters

- **AnalogSwitch:** This parameter can be one of the following values:
  - LL_SYSCFG_ANALOG_SWITCH_PA0 : PA0 analog switch
  - LL_SYSCFG_ANALOG_SWITCH_PA1: PA1 analog switch
  - LL_SYSCFG_ANALOG_SWITCH_PC2 : PC2 analog switch
  - LL_SYSCFG_ANALOG_SWITCH_PC3: PC3 analog switch

Return values

- **None:**

Reference Manual to LL API cross reference:

- PMCR PA0SO LL_SYSCFG_CloseAnalogSwitch
- PMCR PA1SO LL_SYSCFG_CloseAnalogSwitch
- PMCR PC2SO LL_SYSCFG_CloseAnalogSwitch
- PMCR PC3SO LL_SYSCFG_CloseAnalogSwitch

LL_SYSCFG_EnableAnalogBooster

Function name

__STATIC_INLINE void LL_SYSCFG_EnableAnalogBooster (void)

Function description

Enable the Analog booster to reduce the total harmonic distortion of the analog switch when the supply voltage is lower than 2.7 V.

Return values

- **None:**

Notes

- Activating the booster allows to guaranty the analog switch AC performance when the supply voltage is below 2.7 V: in this case, the analog switch performance is the same on the full voltage range

Reference Manual to LL API cross reference:

- PMCR BOOSTEN LL_SYSCFG_EnableAnalogBooster

LL_SYSCFG_DisableAnalogBooster

Function name

__STATIC_INLINE void LL_SYSCFG_DisableAnalogBooster (void)

Function description

Disable the Analog booster.

Return values

- **None:**

Notes

- Activating the booster allows to guaranty the analog switch AC performance when the supply voltage is below 2.7 V: in this case, the analog switch performance is the same on the full voltage range

Reference Manual to LL API cross reference:

- PMCR BOOSTEN LL_SYSCFG_DisableAnalogBooster

LL_SYSCFG_EnableFastModePlus

Function name

__STATIC_INLINE void LL_SYSCFG_EnableFastModePlus (uint32_t ConfigFastModePlus)

Function description

Enable the I2C fast mode plus driving capability.

Parameters

- **ConfigFastModePlus:** This parameter can be a combination of the following values:
  - LL_SYSCFG_I2C_FASTMODEPLUS_PB6
  - LL_SYSCFG_I2C_FASTMODEPLUS_PB7
  - LL_SYSCFG_I2C_FASTMODEPLUS_PB8 (*)
  - LL_SYSCFG_I2C_FASTMODEPLUS_PB9 (*)
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C1
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C2 (*)
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C3
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C4 (*)
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C5 (*)

  (*) value not defined in all devices

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_PMCR I2C_PBx_FMP LL_SYSCFG_EnableFastModePlus
- SYSCFG_PMCR I2Cx_FMP LL_SYSCFG_EnableFastModePlus

LL_SYSCFG_DisableFastModePlus

Function name

__STATIC_INLINE void LL_SYSCFG_DisableFastModePlus (uint32_t ConfigFastModePlus)

Function description

Disable the I2C fast mode plus driving capability.

Parameters

- **ConfigFastModePlus:** This parameter can be a combination of the following values:
  - LL_SYSCFG_I2C_FASTMODEPLUS_PB6
  - LL_SYSCFG_I2C_FASTMODEPLUS_PB7
  - LL_SYSCFG_I2C_FASTMODEPLUS_PB8 (*)
  - LL_SYSCFG_I2C_FASTMODEPLUS_PB9 (*)
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C1
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C2 (*)
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C3
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C4
  - LL_SYSCFG_I2C_FASTMODEPLUS_I2C5 (*)

  (*) value not defined in all devices

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_PMCR I2C_PBx_FMP LL_SYSCFG_DisableFastModePlus
- SYSCFG_PMCR I2Cx_FMP LL_SYSCFG_DisableFastModePlus

LL_SYSCFG_SetEXTISource

Function name

__STATIC_INLINE void LL_SYSCFG_SetEXTISource (uint32_t Port, uint32_t Line)

Function description

Configure source input for the EXTI external interrupt.

Parameters

- **Port:** This parameter can be one of the following values:
  - LL_SYSCFG_EXTI_PORTA
  - LL_SYSCFG_EXTI_PORTB
  - LL_SYSCFG_EXTI_PORTC
  - LL_SYSCFG_EXTI_PORTD
  - LL_SYSCFG_EXTI_PORTE
  - LL_SYSCFG_EXTI_PORTF
  - LL_SYSCFG_EXTI_PORTG
  - LL_SYSCFG_EXTI_PORTH
  - LL_SYSCFG_EXTI_PORTI (*)
  - LL_SYSCFG_EXTI_PORTJ
  - LL_SYSCFG_EXTI_PORTK

  (*) value not defined in all devices
- **Line:** This parameter can be one of the following values:
  - LL_SYSCFG_EXTI_LINE0
  - LL_SYSCFG_EXTI_LINE1
  - LL_SYSCFG_EXTI_LINE2
  - LL_SYSCFG_EXTI_LINE3
  - LL_SYSCFG_EXTI_LINE4
  - LL_SYSCFG_EXTI_LINE5
  - LL_SYSCFG_EXTI_LINE6
  - LL_SYSCFG_EXTI_LINE7
  - LL_SYSCFG_EXTI_LINE8
  - LL_SYSCFG_EXTI_LINE9
  - LL_SYSCFG_EXTI_LINE10
  - LL_SYSCFG_EXTI_LINE11
  - LL_SYSCFG_EXTI_LINE12
  - LL_SYSCFG_EXTI_LINE13
  - LL_SYSCFG_EXTI_LINE14
  - LL_SYSCFG_EXTI_LINE15

Return values

- **None:**

Reference Manual to LL API cross reference:

- SYSCFG_EXTICR1 EXTIx LL_SYSCFG_SetEXTISource
- SYSCFG_EXTICR2 EXTIx LL_SYSCFG_SetEXTISource
- SYSCFG_EXTICR3 EXTIx LL_SYSCFG_SetEXTISource
- SYSCFG_EXTICR4 EXTIx LL_SYSCFG_SetEXTISource

LL_SYSCFG_GetEXTISource

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetEXTISource (uint32_t Line)

Function description

Get the configured defined for specific EXTI Line.

Parameters

- **Line:** This parameter can be one of the following values:
  - LL_SYSCFG_EXTI_LINE0
  - LL_SYSCFG_EXTI_LINE1
  - LL_SYSCFG_EXTI_LINE2
  - LL_SYSCFG_EXTI_LINE3
  - LL_SYSCFG_EXTI_LINE4
  - LL_SYSCFG_EXTI_LINE5
  - LL_SYSCFG_EXTI_LINE6
  - LL_SYSCFG_EXTI_LINE7
  - LL_SYSCFG_EXTI_LINE8
  - LL_SYSCFG_EXTI_LINE9
  - LL_SYSCFG_EXTI_LINE10
  - LL_SYSCFG_EXTI_LINE11
  - LL_SYSCFG_EXTI_LINE12
  - LL_SYSCFG_EXTI_LINE13
  - LL_SYSCFG_EXTI_LINE14
  - LL_SYSCFG_EXTI_LINE15

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_EXTI_PORTA
  - LL_SYSCFG_EXTI_PORTB
  - LL_SYSCFG_EXTI_PORTC
  - LL_SYSCFG_EXTI_PORTD
  - LL_SYSCFG_EXTI_PORTE
  - LL_SYSCFG_EXTI_PORTF
  - LL_SYSCFG_EXTI_PORTG
  - LL_SYSCFG_EXTI_PORTH
  - LL_SYSCFG_EXTI_PORTI (*)
  - LL_SYSCFG_EXTI_PORTJ
  - LL_SYSCFG_EXTI_PORTK (*) value not defined in all devices

Reference Manual to LL API cross reference:

- SYSCFG_EXTICR1 EXTIx LL_SYSCFG_GetEXTISource
- SYSCFG_EXTICR2 EXTIx LL_SYSCFG_GetEXTISource
- SYSCFG_EXTICR3 EXTIx LL_SYSCFG_GetEXTISource
- SYSCFG_EXTICR4 EXTIx LL_SYSCFG_GetEXTISource

LL_SYSCFG_SetTIMBreakInputs

Function name

__STATIC_INLINE void LL_SYSCFG_SetTIMBreakInputs (uint32_t Break)

Function description

Set connections to TIM1/8/15/16/17 and HRTIM Break inputs.

Parameters

- **Break:** This parameter can be a combination of the following values:
  - LL_SYSCFG_TIMBREAK_AXISRAM_DBL_ECC
  - LL_SYSCFG_TIMBREAK_ITCM_DBL_ECC
  - LL_SYSCFG_TIMBREAK_DTCM_DBL_ECC
  - LL_SYSCFG_TIMBREAK_SRAM1_DBL_ECC
  - LL_SYSCFG_TIMBREAK_SRAM2_DBL_ECC
  - LL_SYSCFG_TIMBREAK_SRAM3_DBL_ECC (*)
  - LL_SYSCFG_TIMBREAK_SRAM4_DBL_ECC
  - LL_SYSCFG_TIMBREAK_BKRAM_DBL_ECC
  - LL_SYSCFG_TIMBREAK_CM7_LOCKUP
  - LL_SYSCFG_TIMBREAK_FLASH_DBL_ECC
  - LL_SYSCFG_TIMBREAK_PVD
  - LL_SYSCFG_TIMBREAK_CM4_LOCKUP (available for dual core lines only)

Return values

- **None:** (*) value not defined in all devices

Notes

- this feature is available on STM32H7 rev.B and above

Reference Manual to LL API cross reference:

- SYSCFG_CFGR AXISRAML LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR ITCML LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR DTCML LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR SRAM1L LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR SRAM2L LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR SRAM3L LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR SRAM4L LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR BKRAML LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR CM7L LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR FLASHL LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR PVDL LL_SYSCFG_SetTIMBreakInputs
- SYSCFG_CFGR_CM4L LL_SYSCFG_SetTIMBreakInputs

LL_SYSCFG_GetTIMBreakInputs

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetTIMBreakInputs (void)

Function description

Get connections to TIM1/8/15/16/17 and HRTIM Break inputs.

Return values

- **Returned:** value can be can be a combination of the following values:
  - LL_SYSCFG_TIMBREAK_AXISRAM_DBL_ECC
  - LL_SYSCFG_TIMBREAK_ITCM_DBL_ECC
  - LL_SYSCFG_TIMBREAK_DTCM_DBL_ECC
  - LL_SYSCFG_TIMBREAK_SRAM1_DBL_ECC
  - LL_SYSCFG_TIMBREAK_SRAM2_DBL_ECC
  - LL_SYSCFG_TIMBREAK_SRAM3_DBL_ECC (*)
  - LL_SYSCFG_TIMBREAK_SRAM4_DBL_ECC
  - LL_SYSCFG_TIMBREAK_BKRAM_DBL_ECC
  - LL_SYSCFG_TIMBREAK_CM7_LOCKUP
  - LL_SYSCFG_TIMBREAK_FLASH_DBL_ECC
  - LL_SYSCFG_TIMBREAK_PVD
  - LL_SYSCFG_TIMBREAK_CM4_LOCKUP (available for dual core lines only) (*) value not defined in all devices

Notes

- this feature is available on STM32H7 rev.B and above

Reference Manual to LL API cross reference:

- SYSCFG_CFGR AXISRAML LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR ITCML LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR DTCML LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR SRAM1L LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR SRAM2L LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR SRAM3L LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR SRAM4L LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR BKRAML LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR CM7L LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR FLASHL LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR PVDL LL_SYSCFG_GetTIMBreakInputs
- SYSCFG_CFGR_CM4L LL_SYSCFG_GetTIMBreakInputs

LL_SYSCFG_EnableCompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_EnableCompensationCell (void)

Function description

Enable the Compensation Cell.

Return values

- **None:**

Notes

- The I/O compensation cell can be used only when the device supply voltage ranges from 1.62 to 2.0 V and from 2.7 to 3.6 V.

Reference Manual to LL API cross reference:

- CCCSR EN LL_SYSCFG_EnableCompensationCell

LL_SYSCFG_DisableCompensationCell

Function name

__STATIC_INLINE void LL_SYSCFG_DisableCompensationCell (void)

Function description

Disable the Compensation Cell.

Return values

- **None:**

Notes

- The I/O compensation cell can be used only when the device supply voltage ranges from 1.62 to 2.0 V and from 2.7 to 3.6 V.

Reference Manual to LL API cross reference:

- CCCSR EN LL_SYSCFG_DisableCompensationCell

LL_SYSCFG_IsEnabledCompensationCell

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledCompensationCell (void)

Function description

Check if the Compensation Cell is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR EN LL_SYSCFG_IsEnabledCompensationCell

LL_SYSCFG_IsActiveFlag_CMPCR

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsActiveFlag_CMPCR (void)

Function description

Get Compensation Cell ready Flag.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR READY LL_SYSCFG_IsActiveFlag_CMPCR

LL_SYSCFG_EnableIOSpeedOptimization

Function name

__STATIC_INLINE void LL_SYSCFG_EnableIOSpeedOptimization (void)

Function description

Enable the I/O speed optimization when the product voltage is low.

Return values

- **None:**

Notes

- This bit is active only if IO_HSLV user option bit is set. It must be used only if the product supply voltage is below 2.7 V. Setting this bit when VDD is higher than 2.7 V might be destructive.

Reference Manual to LL API cross reference:

- CCCSR HSLV LL_SYSCFG_EnableIOSpeedOptimize

LL_SYSCFG_DisableIOSpeedOptimization

Function name

__STATIC_INLINE void LL_SYSCFG_DisableIOSpeedOptimization (void)

Function description

To Disable optimize the I/O speed when the product voltage is low.

Return values

- **None:**

Notes

- This bit is active only if IO_HSLV user option bit is set. It must be used only if the product supply voltage is below 2.7 V. Setting this bit when VDD is higher than 2.7 V might be destructive.

Reference Manual to LL API cross reference:

- CCCSR HSLV LL_SYSCFG_DisableIOSpeedOptimize

LL_SYSCFG_IsEnabledIOSpeedOptimization

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsEnabledIOSpeedOptimization (void)

Function description

Check if the I/O speed optimization is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCCSR HSLV LL_SYSCFG_IsEnabledIOSpeedOptimization

LL_SYSCFG_SetCellCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetCellCompensationCode (uint32_t CompCode)

Function description

Set the code selection for the I/O Compensation cell.

Parameters

- **CompCode:** Selects the code to be applied for the I/O compensation cell This parameter can be one of the following values:
  - LL_SYSCFG_CELL_CODE : Select Code from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_REGISTER_CODE: Select Code from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCSR CS LL_SYSCFG_SetCellCompensationCode

LL_SYSCFG_GetCellCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetCellCompensationCode (void)

Function description

Get the code selected for the I/O Compensation cell.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_CELL_CODE : Selected Code is from the cell (available in the SYSCFG_CCVR)
  - LL_SYSCFG_REGISTER_CODE: Selected Code is from the SYSCFG compensation cell code register (SYSCFG_CCCR)

Reference Manual to LL API cross reference:

- CCCSR CS LL_SYSCFG_GetCellCompensationCode

LL_SYSCFG_GetPMOSCompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSCompensationValue (void)

Function description

Get I/O compensation cell value for PMOS transistors.

Return values

- **Returned:** value is the I/O compensation cell value for PMOS transistors

Reference Manual to LL API cross reference:

- CCVR PCV LL_SYSCFG_GetPMOSCompensationValue

LL_SYSCFG_GetNMOSCompensationValue

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSCompensationValue (void)

Function description

Get I/O compensation cell value for NMOS transistors.

Return values

- **Returned:** value is the I/O compensation cell value for NMOS transistors

Reference Manual to LL API cross reference:

- CCVR NCV LL_SYSCFG_GetNMOSCompensationValue

LL_SYSCFG_SetPMOSCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetPMOSCompensationCode (uint32_t PMOSCode)

Function description

Set I/O compensation cell code for PMOS transistors.

Parameters

- **PMOSCode:** PMOS compensation code This code is applied to the I/O compensation cell when the CS bit of the SYSCFG_CMPCR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR PCC LL_SYSCFG_SetPMOSCompensationCode

LL_SYSCFG_GetPMOSCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPMOSCompensationCode (void)

Function description

Get I/O compensation cell code for PMOS transistors.

Return values

- **Returned:** value is the I/O compensation cell code for PMOS transistors

Reference Manual to LL API cross reference:

- CCCR PCC LL_SYSCFG_GetPMOSCompensationCode

LL_SYSCFG_SetNMOSCompensationCode

Function name

__STATIC_INLINE void LL_SYSCFG_SetNMOSCompensationCode (uint32_t NMOSCode)

Function description

Set I/O compensation cell code for NMOS transistors.

Parameters

- **NMOSCode:** NMOS compensation code This code is applied to the I/O compensation cell when the CS bit of the SYSCFG_CMPCR is set

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCCR NCC LL_SYSCFG_SetNMOSCompensationCode

LL_SYSCFG_GetNMOSCompensationCode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetNMOSCompensationCode (void)

Function description

Get I/O compensation cell code for NMOS transistors.

Return values

- **Returned:** value is the I/O compensation cell code for NMOS transistors

Reference Manual to LL API cross reference:

- CCCR NCC LL_SYSCFG_GetNMOSCompensationCode

LL_SYSCFG_GetPackage

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetPackage (void)

Function description

Get the device package.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_LQFP100_PACKAGE (*)
  - LL_SYSCFG_TQFP144_PACKAGE (*)
  - LL_SYSCFG_TQFP176_UFBGA176_PACKAGE (*)
  - LL_SYSCFG_LQFP208_TFBGA240_PACKAGE (*)
  - LL_SYSCFG_VFQFPN68_INDUS_PACKAGE (*)
  - LL_SYSCFG_TFBGA100_LQFP100_PACKAGE (*)
  - LL_SYSCFG_LQFP100_INDUS_PACKAGE (**)
  - LL_SYSCFG_TFBGA100_INDUS_PACKAGE (**)
  - LL_SYSCFG_WLCSP115_INDUS_PACKAGE (**)
  - LL_SYSCFG_LQFP144_PACKAGE (**)
  - LL_SYSCFG_UFBGA144_PACKAGE (**)
  - LL_SYSCFG_LQFP144_INDUS_PACKAGE (**)
  - LL_SYSCFG_UFBGA169_INDUS_PACKAGE (**)
  - LL_SYSCFG_UFBGA176PLUS25_INDUS_PACKAGE (**)
  - LL_SYSCFG_LQFP176_INDUS_PACKAGE (**)

  (*) : For stm32h74xxx and stm32h75xxx family lines. (**): For stm32h72xxx and stm32h73xxx family lines.

Reference Manual to LL API cross reference:

- PKGR PKG LL_SYSCFG_GetPackage

LL_SYSCFG_GetFLashProtectionLevel

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetFLashProtectionLevel (void)

Function description

Get the Flash memory protection level.

Return values

- **Returned:** value can be one of the following values: 0xAA : RDP level 0 0xCC : RDP level 2 Any other value : RDP level 1

Reference Manual to LL API cross reference:

- UR0 RDP LL_SYSCFG_GetFLashProtectionLevel

LL_SYSCFG_IsFLashBankAddressesSwaped

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFLashBankAddressesSwaped (void)

Function description

Indicate if the Flash memory bank addresses are inverted or not.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR0 BKS LL_SYSCFG_IsFLashBankAddressesSwaped

LL_SYSCFG_GetBrownoutResetLevel

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetBrownoutResetLevel (void)

Function description

Get the BOR Threshold Reset Level.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_BOR_HIGH_RESET_LEVEL
  - LL_SYSCFG_BOR_MEDIUM_RESET_LEVEL
  - LL_SYSCFG_BOR_LOW_RESET_LEVEL
  - LL_SYSCFG_BOR_OFF_RESET_LEVEL

Reference Manual to LL API cross reference:

- UR2 BORH LL_SYSCFG_GetBrownoutResetLevel

LL_SYSCFG_SetCM7BootAddress0

Function name

__STATIC_INLINE void LL_SYSCFG_SetCM7BootAddress0 (uint16_t BootAddress)

Function description

BootCM7 address 0 configuration.

Parameters

- **BootAddress:** :Specifies the CM7 Boot Address to be loaded in Address0

Return values

- **None:**

Reference Manual to LL API cross reference:

- UR2 BOOT_ADD0 LL_SYSCFG_SetCM7BootAddress0

LL_SYSCFG_GetCM7BootAddress0

Function name

__STATIC_INLINE uint16_t LL_SYSCFG_GetCM7BootAddress0 (void)

Function description

Get BootCM7 address 0.

Return values

- **Returned:** the CM7 Boot Address0

Reference Manual to LL API cross reference:

- UR2 BOOT_ADD0 LL_SYSCFG_GetCM7BootAddress0

LL_SYSCFG_SetCM7BootAddress1

Function name

__STATIC_INLINE void LL_SYSCFG_SetCM7BootAddress1 (uint16_t BootAddress)

Function description

BootCM7 address 1 configuration.

Parameters

- **BootAddress:** :Specifies the CM7 Boot Address to be loaded in Address1

Return values

- **None:**

Reference Manual to LL API cross reference:

- UR3 BOOT_ADD1 LL_SYSCFG_SetCM7BootAddress1

LL_SYSCFG_GetCM7BootAddress1

Function name

__STATIC_INLINE uint16_t LL_SYSCFG_GetCM7BootAddress1 (void)

Function description

Get BootCM7 address 1.

Return values

- **Returned:** the CM7 Boot Address0

Reference Manual to LL API cross reference:

- UR3 BOOT_ADD1 LL_SYSCFG_GetCM7BootAddress1

LL_SYSCFG_SetCM4BootAddress0

Function name

__STATIC_INLINE void LL_SYSCFG_SetCM4BootAddress0 (uint16_t BootAddress)

Function description

BootCM4 address 0 configuration.

Parameters

- **BootAddress:** :Specifies the CM4 Boot Address to be loaded in Address0

Return values

- **None:**

Reference Manual to LL API cross reference:

- UR3 BCM4_ADD0 LL_SYSCFG_SetCM4BootAddress0

LL_SYSCFG_GetCM4BootAddress0

Function name

__STATIC_INLINE uint16_t LL_SYSCFG_GetCM4BootAddress0 (void)

Function description

Get BootCM4 address 0.

Return values

- **Returned:** the CM4 Boot Address0

Reference Manual to LL API cross reference:

- UR3 BCM4_ADD0 LL_SYSCFG_GetCM4BootAddress0

LL_SYSCFG_SetCM4BootAddress1

Function name

__STATIC_INLINE void LL_SYSCFG_SetCM4BootAddress1 (uint16_t BootAddress)

Function description

BootCM4 address 1 configuration.

Parameters

- **BootAddress:** :Specifies the CM4 Boot Address to be loaded in Address1

Return values

- **None:**

Reference Manual to LL API cross reference:

- UR4 BCM4_ADD1 LL_SYSCFG_SetCM4BootAddress1

LL_SYSCFG_GetCM4BootAddress1

Function name

__STATIC_INLINE uint16_t LL_SYSCFG_GetCM4BootAddress1 (void)

Function description

Get BootCM4 address 1.

Return values

- **Returned:** the CM4 Boot Address0

Reference Manual to LL API cross reference:

- UR4 BCM4_ADD1 LL_SYSCFG_GetCM4BootAddress1

LL_SYSCFG_IsFlashB1ProtectedAreaErasable

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1ProtectedAreaErasable (void)

Function description

Indicates if the flash protected area (Bank 1) is erased by a mass erase.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR4 MEPAD_BANK1 LL_SYSCFG_IsFlashB1ProtectedAreaErasable

LL_SYSCFG_IsFlashB1SecuredAreaErasable

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1SecuredAreaErasable (void)

Function description

Indicates if the flash secured area (Bank 1) is erased by a mass erase.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR5 MESAD_BANK1 LL_SYSCFG_IsFlashB1SecuredAreaErasable

LL_SYSCFG_IsFlashB1Sector0WriteProtected

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1Sector0WriteProtected (void)

Function description

Indicates if the sector 0 of the Flash memory bank 1 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR5 WRPN_BANK1 LL_SYSCFG_IsFlashB1Sector0WriteProtected

LL_SYSCFG_IsFlashB1Sector1WriteProtected

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1Sector1WriteProtected (void)

Function description

Indicates if the sector 1 of the Flash memory bank 1 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR5 WRPN_BANK1 LL_SYSCFG_IsFlashB1Sector1WriteProtected

LL_SYSCFG_IsFlashB1Sector2WriteProtected

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1Sector2WriteProtected (void)

Function description

Indicates if the sector 2 of the Flash memory bank 1 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR5 WRPN_BANK1 LL_SYSCFG_IsFlashB1Sector2WriteProtected

LL_SYSCFG_IsFlashB1Sector3WriteProtected

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1Sector3WriteProtected (void)

Function description

Indicates if the sector 3 of the Flash memory bank 1 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR5 WRPN_BANK1 LL_SYSCFG_IsFlashB1Sector3WriteProtected

LL_SYSCFG_IsFlashB1Sector4WriteProtected

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1Sector4WriteProtected (void)

Function description

Indicates if the sector 4 of the Flash memory bank 1 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR5 WRPN_BANK1 LL_SYSCFG_IsFlashB1Sector4WriteProtected

LL_SYSCFG_IsFlashB1Sector5WriteProtected

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1Sector5WriteProtected (void)

Function description

Indicates if the sector 5 of the Flash memory bank 1 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR5 WRPN_BANK1 LL_SYSCFG_IsFlashB1Sector5WriteProtected

LL_SYSCFG_IsFlashB1Sector6WriteProtected

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1Sector6WriteProtected (void)

Function description

Indicates if the sector 6 of the Flash memory bank 1 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR5 WRPN_BANK1 LL_SYSCFG_IsFlashB1Sector6WriteProtected

LL_SYSCFG_IsFlashB1Sector7WriteProtected

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB1Sector7WriteProtected (void)

Function description

Indicates if the sector 7 of the Flash memory bank 1 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR5 WRPN_BANK1 LL_SYSCFG_IsFlashB1Sector7WriteProtected

LL_SYSCFG_GetFlashB1ProtectedAreaStartAddress

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetFlashB1ProtectedAreaStartAddress (void)

Function description

Get the protected area start address for Flash bank 1.

Return values

- **Returned:** the protected area start address for Flash bank 1

Reference Manual to LL API cross reference:

- UR6 PABEG_BANK1 LL_SYSCFG_GetFlashB1ProtectedAreaStartAddress

LL_SYSCFG_GetFlashB1ProtectedAreaEndAddress

Function name

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB2Sector6WriteProtected (void)

Function description

Indicates if the sector 6 of the Flash memory bank 2 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR9 WRPN_BANK2 LL_SYSCFG_IsFlashB2Sector6WriteProtected

LL_SYSCFG_IsFlashB2Sector7WriteProtected

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsFlashB2Sector7WriteProtected (void)

Function description

Indicates if the sector 7 of the Flash memory bank 2 is write protected.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR9 WRPN_BANK2 LL_SYSCFG_IsFlashB2Sector7WriteProtected

LL_SYSCFG_GetFlashB2ProtectedAreaStartAddress

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetFlashB2ProtectedAreaStartAddress (void)

Function description

Get the protected area start address for Flash bank 2.

Return values

- **Returned:** the protected area start address for Flash bank 2

Reference Manual to LL API cross reference:

- UR9 PABEG_BANK2 LL_SYSCFG_GetFlashB2ProtectedAreaStartAddress

LL_SYSCFG_GetFlashB2ProtectedAreaEndAddress

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetFlashB2ProtectedAreaEndAddress (void)

Function description

Get the protected area end address for Flash bank 2.

Return values

- **Returned:** the protected area end address for Flash bank 2

Reference Manual to LL API cross reference:

- UR10 PAEND_BANK2 LL_SYSCFG_GetFlashB2ProtectedAreaEndAddress

LL_SYSCFG_GetFlashB2SecuredAreaStartAddress

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetFlashB2SecuredAreaStartAddress (void)

Function description

Get the secured area start address for Flash bank 2.

Return values

- **Returned:** the secured area start address for Flash bank 2

Reference Manual to LL API cross reference:

- UR10 SABEG_BANK2 LL_SYSCFG_GetFlashB2SecuredAreaStartAddress

LL_SYSCFG_GetFlashB2SecuredAreaEndAddress

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetFlashB2SecuredAreaEndAddress (void)

Function description

Get the secured area end address for Flash bank 2.

Return values

- **Returned:** the secured area end address for Flash bank 2

Reference Manual to LL API cross reference:

- UR11 SAEND_BANK2 LL_SYSCFG_GetFlashB2SecuredAreaEndAddress

LL_SYSCFG_GetIWDG1ControlMode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetIWDG1ControlMode (void)

Function description

Get the Independent Watchdog 1 control mode (Software or Hardware)

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_IWDG1_SW_CONTROL_MODE
  - LL_SYSCFG_IWDG1_HW_CONTROL_MODE

Reference Manual to LL API cross reference:

- UR11 IWDG1M LL_SYSCFG_GetIWDG1ControlMode

LL_SYSCFG_GetIWDG2ControlMode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetIWDG2ControlMode (void)

Function description

Get the Independent Watchdog 2 control mode (Software or Hardware)

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_IWDG2_SW_CONTROL_MODE
  - LL_SYSCFG_IWDG2_HW_CONTROL_MODE

Reference Manual to LL API cross reference:

- UR12 IWDG2M LL_SYSCFG_GetIWDG2ControlMode

LL_SYSCFG_IsSecureModeEnabled

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsSecureModeEnabled (void)

Function description

Indicates the Secure mode status.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR12 SECURE LL_SYSCFG_IsSecureModeEnabled

LL_SYSCFG_IsD1StandbyGenerateReset

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsD1StandbyGenerateReset (void)

Function description

Indicates if a reset is generated when D1 domain enters DStandby mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR13 D1SBRST LL_SYSCFG_IsD1StandbyGenerateReset

LL_SYSCFG_GetSecuredDTCMSize

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_GetSecuredDTCMSize (void)

Function description

Get the secured DTCM RAM size.

Return values

- **Returned:** value can be one of the following values:
  - LL_SYSCFG_DTCM_RAM_SIZE_2KB
  - LL_SYSCFG_DTCM_RAM_SIZE_4KB
  - LL_SYSCFG_DTCM_RAM_SIZE_8KB
  - LL_SYSCFG_DTCM_RAM_SIZE_16KB

Reference Manual to LL API cross reference:

- UR13 SDRS LL_SYSCFG_GetSecuredDTCMSize

LL_SYSCFG_IsD1StopGenerateReset

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsD1StopGenerateReset (void)

Function description

Indicates if a reset is generated when D1 domain enters DStop mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR14 D1STPRST LL_SYSCFG_IsD1StopGenerateReset

LL_SYSCFG_IsD2StandbyGenerateReset

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsD2StandbyGenerateReset (void)

Function description

Indicates if a reset is generated when D2 domain enters DStandby mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR14 D2SBRST LL_SYSCFG_IsD2StandbyGenerateReset

LL_SYSCFG_IsD2StopGenerateReset

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsD2StopGenerateReset (void)

Function description

Indicates if a reset is generated when D2 domain enters DStop mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR15 D2STPRST LL_SYSCFG_IsD2StopGenerateReset

LL_SYSCFG_IsIWDGFrozenInStandbyMode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsIWDGFrozenInStandbyMode (void)

Function description

Indicates if the independent watchdog is frozen in Standby mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR15 FZIWDGSTB LL_SYSCFG_IsIWDGFrozenInStandbyMode

LL_SYSCFG_IsIWDGFrozenInStopMode

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsIWDGFrozenInStopMode (void)

Function description

Indicates if the independent watchdog is frozen in Stop mode.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR16 FZIWDGSTP LL_SYSCFG_IsIWDGFrozenInStopMode

LL_SYSCFG_IsPrivateKeyProgrammed

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsPrivateKeyProgrammed (void)

Function description

Indicates if the device private key is programmed.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- UR16 PKP LL_SYSCFG_IsPrivateKeyProgrammed

LL_SYSCFG_IsActiveFlag_IOHSLV

Function name

__STATIC_INLINE uint32_t LL_SYSCFG_IsActiveFlag_IOHSLV (void)

Function description

Indicates if the Product is working on the full voltage range or not.

Return values

- **State:** of bit (1 or 0).

Notes

- When the IOHSLV option bit is set the Product is working below 2.7 V. When the IOHSLV option bit is reset the Product is working on the full voltage range.

Reference Manual to LL API cross reference:

- UR17 IOHSLV LL_SYSCFG_IsActiveFlag_IOHSLV

LL_DBGMCU_GetDeviceID

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_GetDeviceID (void)

Function description

Return the device identifier.

Return values

- **Values:** between Min_Data=0x00 and Max_Data=0xFFF

Reference Manual to LL API cross reference:

- DBGMCU_IDCODE DEV_ID LL_DBGMCU_GetDeviceID

LL_DBGMCU_GetRevisionID

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_GetRevisionID (void)

Function description

Return the device revision identifier.

Return values

- **Values:** between Min_Data=0x00 and Max_Data=0xFFFF

Notes

- This field indicates the revision of the device. For example, it is read as RevA -> 0x1000, Cat 2 revZ -> 0x1001

Reference Manual to LL API cross reference:

- DBGMCU_IDCODE REV_ID LL_DBGMCU_GetRevisionID

LL_DBGMCU_EnableD1DebugInSleepMode

Function name

__STATIC_INLINE void LL_DBGMCU_EnableD1DebugInSleepMode (void)

Function description

Enable D1 Domain/CDomain debug during SLEEP mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBGSLEEP_D1/DBGSLEEP_CD LL_DBGMCU_EnableD1DebugInSleepMode

LL_DBGMCU_DisableD1DebugInSleepMode

Function name

__STATIC_INLINE void LL_DBGMCU_DisableD1DebugInSleepMode (void)

Function description

Disable D1 Domain/CDomain debug during SLEEP mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR DBGSLEEP_D1/DBGSLEEP_CD LL_DBGMCU_DisableD1DebugInSleepMode

LL_DBGMCU_EnableD1DebugInStopMode

Function name

__STATIC_INLINE void LL_DBGMCU_EnableD1DebugInStopMode (void)

Function description

Enable D1 Domain/CDomain debug during STOP mode.

Return values

- **None:**

Reference Manual to LL API cross reference:

Function description

Disable the Domain3/SRDomain debug clock enable.

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR CKD3EN/CKSRDEN LL_DBGMCU_DisableD3DebugClock

LL_DBGMCU_SetExternalTriggerPinDirection

Function name

__STATIC_INLINE void LL_DBGMCU_SetExternalTriggerPinDirection (uint32_t PinDirection)

Function description

Set the direction of the bi-directional trigger pin TRGIO.

Parameters

- **PinDirection:** This parameter can be one of the following values:
  - LL_DBGMCU_TRGIO_INPUT_DIRECTION
  - LL_DBGMCU_TRGIO_OUTPUT_DIRECTION

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_CR TRGOEN LL_DBGMCU_SetExternalTriggerPinDirection
-

LL_DBGMCU_GetExternalTriggerPinDirection

Function name

__STATIC_INLINE uint32_t LL_DBGMCU_GetExternalTriggerPinDirection (void)

Function description

Get the direction of the bi-directional trigger pin TRGIO.

Return values

- **Returned:** value can be one of the following values:
  - LL_DBGMCU_TRGIO_INPUT_DIRECTION
  - LL_DBGMCU_TRGIO_OUTPUT_DIRECTION

Reference Manual to LL API cross reference:

- DBGMCU_CR TRGOEN LL_DBGMCU_GetExternalTriggerPinDirection
-

LL_DBGMCU_APB1_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB1 group1 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP1_TIM2_STOP
  - LL_DBGMCU_APB1_GRP1_TIM3_STOP
  - LL_DBGMCU_APB1_GRP1_TIM4_STOP
  - LL_DBGMCU_APB1_GRP1_TIM5_STOP

LL_DBGMCU_APB1_GRP1_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP1_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB1 peripherals (group1 peripherals)

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP1_TIM2_STOP
  - LL_DBGMCU_APB1_GRP1_TIM3_STOP
  - LL_DBGMCU_APB1_GRP1_TIM4_STOP

LL_DBGMCU_APB1_GRP2_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP2_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB1 group2 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP2_FDCAN_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB1HFZ1 FDCAN LL_DBGMCU_APB1_GRP2_FreezePeriph
-

LL_DBGMCU_APB1_GRP2_UnFreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB1_GRP2_UnFreezePeriph (uint32_t Periphs)

Function description

Unfreeze APB1 group2 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB1_GRP2_FDCAN_STOP

Return values

- **None:**

Reference Manual to LL API cross reference:

- DBGMCU_APB1HFZ1 FDCAN LL_DBGMCU_APB1_GRP2_UnFreezePeriph
-

LL_DBGMCU_APB2_GRP1_FreezePeriph

Function name

__STATIC_INLINE void LL_DBGMCU_APB2_GRP1_FreezePeriph (uint32_t Periphs)

Function description

Freeze APB2 peripherals.

Parameters

- **Periphs:** This parameter can be a combination of the following values:
  - LL_DBGMCU_APB2_GRP1_TIM1_STOP
  - LL_DBGMCU_APB2_GRP1_TIM8_STOP
  - LL_DBGMCU_APB2_GRP1_TIM15_STOP

LL_FLASH_SetLatency

Function name

__STATIC_INLINE void LL_FLASH_SetLatency (uint32_t Latency)

Function description

Set FLASH Latency.

Parameters

- **Latency:** This parameter can be one of the following values:
  - LL_FLASH_LATENCY_0
  - LL_FLASH_LATENCY_1
  - LL_FLASH_LATENCY_2
  - LL_FLASH_LATENCY_3
  - LL_FLASH_LATENCY_4
  - LL_FLASH_LATENCY_5
  - LL_FLASH_LATENCY_6
  - LL_FLASH_LATENCY_7

Return values

- **None:**

Reference Manual to LL API cross reference:

- FLASH_ACR LATENCY LL_FLASH_SetLatency

LL_FLASH_GetLatency

Function name

__STATIC_INLINE uint32_t LL_FLASH_GetLatency (void)

Function description

Get FLASH Latency.

Return values

- **Returned:** value can be one of the following values:
  - LL_FLASH_LATENCY_0
  - LL_FLASH_LATENCY_1
  - LL_FLASH_LATENCY_2
  - LL_FLASH_LATENCY_3
  - LL_FLASH_LATENCY_4
  - LL_FLASH_LATENCY_5
  - LL_FLASH_LATENCY_6
  - LL_FLASH_LATENCY_7

Reference Manual to LL API cross reference:

- FLASH_ACR LATENCY LL_FLASH_GetLatency

LL_ART_Enable

Function name

__STATIC_INLINE void LL_ART_Enable (void)

Function description

Enable the Cortex-M4 ART cache.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ART_CTR EN LL_ART_Enable

LL_ART_Disable

Function name

__STATIC_INLINE void LL_ART_Disable (void)

Function description

Disable the Cortex-M4 ART cache.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ART_CTR EN LL_ART_Disable

LL_ART_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_ART_IsEnabled (void)

Function description

Check if the Cortex-M4 ART cache is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ART_CTR EN LL_ART_IsEnabled

LL_ART_SetBaseAddress

Function name

__STATIC_INLINE void LL_ART_SetBaseAddress (uint32_t BaseAddress)

Function description

Set the Cortex-M4 ART cache Base Address.

Parameters

- **BaseAddress:** Specifies the Base address of 1 Mbyte address page (cacheable page) from which the ART accelerator loads code to the cache.

Return values

- **None:**

Reference Manual to LL API cross reference:

- ART_CTR PCACHEADDR LL_ART_SetBaseAddress

LL_ART_GetBaseAddress

Function name

__STATIC_INLINE uint32_t LL_ART_GetBaseAddress (void)

Function description

Get the Cortex-M4 ART cache Base Address.

Return values

- **the:** Base address of 1 Mbyte address page (cacheable page) from which the ART accelerator loads code to the cache

Reference Manual to LL API cross reference:

- ART_CTR PCACHEADDR LL_ART_GetBaseAddress

126 LL TIM Generic Driver

126.1 TIM Firmware driver registers structures

126.1.1 LL_TIM_InitTypeDef

LL_TIM_InitTypeDef is defined in the stm32h7xx_ll_tim.h

Data Fields

- ***uint16_t Prescaler***
- ***uint32_t CounterMode***
- ***uint32_t Autoreload***
- ***uint32_t ClockDivision***
- ***uint32_t RepetitionCounter***

Field Documentation

- ***uint16_t LL_TIM_InitTypeDef::Prescaler***

  Specifies the prescaler value used to divide the TIM clock. This parameter can be a number between Min_Data=0x0000 and Max_Data=0xFFFF.This feature can be modified afterwards using unitary function **LL_TIM_SetPrescaler()**.
- ***uint32_t LL_TIM_InitTypeDef::CounterMode***

  Specifies the counter mode. This parameter can be a value of ***TIM_LL_EC_COUNTERMODE***.This feature can be modified afterwards using unitary function **LL_TIM_SetCounterMode()**.
- ***uint32_t LL_TIM_InitTypeDef::Autoreload***

  Specifies the auto reload value to be loaded into the active Auto-Reload Register at the next update event. This parameter must be a number between Min_Data=0x0000 and Max_Data=0xFFFF. Some timer instances may support 32 bits counters. In that case this parameter must be a number between 0x0000 and 0xFFFFFFFF.This feature can be modified afterwards using unitary function **LL_TIM_SetAutoReload()**.
- ***uint32_t LL_TIM_InitTypeDef::ClockDivision***

  Specifies the clock division. This parameter can be a value of ***TIM_LL_EC_CLOCKDIVISION***.This feature can be modified afterwards using unitary function **LL_TIM_SetClockDivision()**.
- ***uint32_t LL_TIM_InitTypeDef::RepetitionCounter***

  Specifies the repetition counter value. Each time the RCR downcounter reaches zero, an update event is generated and counting restarts from the RCR value (N). This means in PWM mode that (N+1) corresponds to:
  - the number of PWM periods in edge-aligned mode
  - the number of half PWM period in center-aligned mode GP timers: this parameter must be a number between Min_Data = 0x00 and Max_Data = 0xFF. Advanced timers: this parameter must be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF.

  This feature can be modified afterwards using unitary function **LL_TIM_SetRepetitionCounter()**.

126.1.2 LL_TIM_OC_InitTypeDef

LL_TIM_OC_InitTypeDef is defined in the stm32h7xx_ll_tim.h

Data Fields

- ***uint32_t OCMode***
- ***uint32_t OCState***
- ***uint32_t OCNState***
- ***uint32_t CompareValue***
- ***uint32_t OCPolarity***
- ***uint32_t OCNPolarity***
- ***uint32_t OCIdleState***

- ***uint32_t OCNIdleState***

Field Documentation

- ***uint32_t LL_TIM_OC_InitTypeDef::OCMode***

  Specifies the output mode. This parameter can be a value of ***TIM_LL_EC_OCMODE***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetMode()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCState***

  Specifies the TIM Output Compare state. This parameter can be a value of ***TIM_LL_EC_OCSTATE***.This feature can be modified afterwards using unitary functions **LL_TIM_CC_EnableChannel()** or **LL_TIM_CC_DisableChannel()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCNState***

  Specifies the TIM complementary Output Compare state. This parameter can be a value of ***TIM_LL_EC_OCSTATE***.This feature can be modified afterwards using unitary functions **LL_TIM_CC_EnableChannel()** or **LL_TIM_CC_DisableChannel()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::CompareValue***

  Specifies the Compare value to be loaded into the Capture Compare Register. This parameter can be a number between Min_Data=0x0000 and Max_Data=0xFFFF.This feature can be modified afterwards using unitary function LL_TIM_OC_SetCompareCHx (x=1..6).
- ***uint32_t LL_TIM_OC_InitTypeDef::OCPolarity***

  Specifies the output polarity. This parameter can be a value of ***TIM_LL_EC_OCPOLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetPolarity()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCNPolarity***

  Specifies the complementary output polarity. This parameter can be a value of ***TIM_LL_EC_OCPOLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetPolarity()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCIdleState***

  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_LL_EC_OCIDLESTATE***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetIdleState()**.
- ***uint32_t LL_TIM_OC_InitTypeDef::OCNIdleState***

  Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM_LL_EC_OCIDLESTATE***.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetIdleState()**.

126.1.3 LL_TIM_IC_InitTypeDef

LL_TIM_IC_InitTypeDef is defined in the stm32h7xx_ll_tim.h

Data Fields

- ***uint32_t ICPolarity***
- ***uint32_t ICActiveInput***
- ***uint32_t ICPrescaler***
- ***uint32_t ICFilter***

Field Documentation

- ***uint32_t LL_TIM_IC_InitTypeDef::ICPolarity***

  Specifies the active edge of the input signal. This parameter can be a value of ***TIM_LL_EC_IC_POLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_IC_InitTypeDef::ICActiveInput***

  Specifies the input. This parameter can be a value of ***TIM_LL_EC_ACTIVEINPUT***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetActiveInput()**.
- ***uint32_t LL_TIM_IC_InitTypeDef::ICPrescaler***

  Specifies the Input Capture Prescaler. This parameter can be a value of ***TIM_LL_EC_ICPSC***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.

- ***uint32_t LL_TIM_IC_InitTypeDef::ICFilter***

  Specifies the input capture filter. This parameter can be a value of ***TIM_LL_EC_IC_FILTER***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.

126.1.4 LL_TIM_ENCODER_InitTypeDef

LL_TIM_ENCODER_InitTypeDef is defined in the stm32h7xx_ll_tim.h

Data Fields

- ***uint32_t EncoderMode***
- ***uint32_t IC1Polarity***
- ***uint32_t IC1ActiveInput***
- ***uint32_t IC1Prescaler***
- ***uint32_t IC1Filter***
- ***uint32_t IC2Polarity***
- ***uint32_t IC2ActiveInput***
- ***uint32_t IC2Prescaler***
- ***uint32_t IC2Filter***

Field Documentation

- ***uint32_t LL_TIM_ENCODER_InitTypeDef::EncoderMode***

  Specifies the encoder resolution (x2 or x4). This parameter can be a value of ***TIM_LL_EC_ENCODERMODE***.This feature can be modified afterwards using unitary function **LL_TIM_SetEncoderMode()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1Polarity***

  Specifies the active edge of TI1 input. This parameter can be a value of ***TIM_LL_EC_IC_POLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1ActiveInput***

  Specifies the TI1 input source This parameter can be a value of ***TIM_LL_EC_ACTIVEINPUT***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetActiveInput()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1Prescaler***

  Specifies the TI1 input prescaler value. This parameter can be a value of ***TIM_LL_EC_ICPSC***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC1Filter***

  Specifies the TI1 input filter. This parameter can be a value of ***TIM_LL_EC_IC_FILTER***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2Polarity***

  Specifies the active edge of TI2 input. This parameter can be a value of ***TIM_LL_EC_IC_POLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2ActiveInput***

  Specifies the TI2 input source This parameter can be a value of ***TIM_LL_EC_ACTIVEINPUT***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetActiveInput()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2Prescaler***

  Specifies the TI2 input prescaler value. This parameter can be a value of ***TIM_LL_EC_ICPSC***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.
- ***uint32_t LL_TIM_ENCODER_InitTypeDef::IC2Filter***

  Specifies the TI2 input filter. This parameter can be a value of ***TIM_LL_EC_IC_FILTER***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.

126.1.5 LL_TIM_HALLSENSOR_InitTypeDef

LL_TIM_HALLSENSOR_InitTypeDef is defined in the stm32h7xx_ll_tim.h

Data Fields

- ***uint32_t IC1Polarity***
- ***uint32_t IC1Prescaler***

- ***uint32_t IC1Filter***
- ***uint32_t CommutationDelay***

Field Documentation

- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::IC1Polarity***

  Specifies the active edge of TI1 input. This parameter can be a value of ***TIM_LL_EC_IC_POLARITY***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPolarity()**.
- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::IC1Prescaler***

  Specifies the TI1 input prescaler value. Prescaler must be set to get a maximum counter period longer than the time interval between 2 consecutive changes on the Hall inputs. This parameter can be a value of ***TIM_LL_EC_ICPSC***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetPrescaler()**.
- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::IC1Filter***

  Specifies the TI1 input filter. This parameter can be a value of ***TIM_LL_EC_IC_FILTER***.This feature can be modified afterwards using unitary function **LL_TIM_IC_SetFilter()**.
- ***uint32_t LL_TIM_HALLSENSOR_InitTypeDef::CommutationDelay***

  Specifies the compare value to be loaded into the Capture Compare Register. A positive pulse (TRGO event) is generated with a programmable delay every time a change occurs on the Hall inputs. This parameter can be a number between Min_Data = 0x0000 and Max_Data = 0xFFFF.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetCompareCH2()**.

126.1.6 LL_TIM_BDTR_InitTypeDef

LL_TIM_BDTR_InitTypeDef is defined in the stm32h7xx_ll_tim.h

Data Fields

- ***uint32_t OSSRState***
- ***uint32_t OSSIState***
- ***uint32_t LockLevel***
- ***uint8_t DeadTime***
- ***uint16_t BreakState***
- ***uint32_t BreakPolarity***
- ***uint32_t BreakFilter***
- ***uint32_t Break2State***
- ***uint32_t Break2Polarity***
- ***uint32_t Break2Filter***
- ***uint32_t AutomaticOutput***

Field Documentation

- ***uint32_t LL_TIM_BDTR_InitTypeDef::OSSRState***

  Specifies the Off-State selection used in Run mode. This parameter can be a value of ***TIM_LL_EC_OSSR***This feature can be modified afterwards using unitary function **LL_TIM_SetOffStates()**

  Note:

  – This bit-field cannot be modified as long as LOCK level 2 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::OSSIState***

  Specifies the Off-State used in Idle state. This parameter can be a value of ***TIM_LL_EC_OSSI***This feature can be modified afterwards using unitary function **LL_TIM_SetOffStates()**

  Note:

  – This bit-field cannot be modified as long as LOCK level 2 has been programmed.
- ***uint32_t LL_TIM_BDTR_InitTypeDef::LockLevel***

  Specifies the LOCK level parameters. This parameter can be a value of ***TIM_LL_EC_LOCKLEVEL***

  Note:

  – The LOCK bits can be written only once after the reset. Once the TIMx_BDTR register has been written, their content is frozen until the next reset.

- ***uint8_t LL_TIM_BDTR_InitTypeDef::DeadTime***

  Specifies the delay time between the switching-off and the switching-on of the outputs. This parameter can be a number between Min_Data = 0x00 and Max_Data = 0xFF.This feature can be modified afterwards using unitary function **LL_TIM_OC_SetDeadTime()**

  Note:

  – This bit-field can not be modified as long as LOCK level 1, 2 or 3 has been programmed.

- ***uint16_t LL_TIM_BDTR_InitTypeDef::BreakState***

  Specifies whether the TIM Break input is enabled or not. This parameter can be a value of ***TIM_LL_EC_BREAK_ENABLE***This feature can be modified afterwards using unitary functions **LL_TIM_EnableBRK()** or **LL_TIM_DisableBRK()**

  Note:

  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

- ***uint32_t LL_TIM_BDTR_InitTypeDef::BreakPolarity***

  Specifies the TIM Break Input pin polarity. This parameter can be a value of ***TIM_LL_EC_BREAK_POLARITY***This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK()**

  Note:

  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

- ***uint32_t LL_TIM_BDTR_InitTypeDef::BreakFilter***

  Specifies the TIM Break Filter. This parameter can be a value of ***TIM_LL_EC_BREAK_FILTER***This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK()**

  Note:

  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2State***

  Specifies whether the TIM Break2 input is enabled or not. This parameter can be a value of ***TIM_LL_EC_BREAK2_ENABLE***This feature can be modified afterwards using unitary functions **LL_TIM_EnableBRK2()** or **LL_TIM_DisableBRK2()**

  Note:

  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2Polarity***

  Specifies the TIM Break2 Input pin polarity. This parameter can be a value of ***TIM_LL_EC_BREAK2_POLARITY***This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK2()**

  Note:

  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

- ***uint32_t LL_TIM_BDTR_InitTypeDef::Break2Filter***

  Specifies the TIM Break2 Filter. This parameter can be a value of ***TIM_LL_EC_BREAK2_FILTER***This feature can be modified afterwards using unitary function **LL_TIM_ConfigBRK2()**

  Note:

  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

- ***uint32_t LL_TIM_BDTR_InitTypeDef::AutomaticOutput***

  Specifies whether the TIM Automatic Output feature is enabled or not. This parameter can be a value of ***TIM_LL_EC_AUTOMATICOUTPUT_ENABLE***This feature can be modified afterwards using unitary functions **LL_TIM_EnableAutomaticOutput()** or **LL_TIM_DisableAutomaticOutput()**

  Note:

  – This bit-field can not be modified as long as LOCK level 1 has been programmed.

126.2 TIM Firmware driver API description

The following section lists the various functions of the TIM library.

126.2.1 Detailed description of functions

LL_TIM_EnableCounter

Function name

__STATIC_INLINE void LL_TIM_EnableCounter (TIM_TypeDef * TIMx)

Function description

Enable timer counter.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CEN LL_TIM_EnableCounter

LL_TIM_DisableCounter

Function name

__STATIC_INLINE void LL_TIM_DisableCounter (TIM_TypeDef * TIMx)

Function description

Disable timer counter.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CEN LL_TIM_DisableCounter

LL_TIM_IsEnabledCounter

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledCounter (const TIM_TypeDef * TIMx)

Function description

Indicates whether the timer counter is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 CEN LL_TIM_IsEnabledCounter

LL_TIM_EnableUpdateEvent

Function name

__STATIC_INLINE void LL_TIM_EnableUpdateEvent (TIM_TypeDef * TIMx)

Function description

Enable update event generation.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UDIS LL_TIM_EnableUpdateEvent

LL_TIM_DisableUpdateEvent

Function name

__STATIC_INLINE void LL_TIM_DisableUpdateEvent (TIM_TypeDef * TIMx)

Function description

Disable update event generation.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UDIS LL_TIM_DisableUpdateEvent

LL_TIM_IsEnabledUpdateEvent

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledUpdateEvent (const TIM_TypeDef * TIMx)

Function description

Indicates whether update event generation is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **Inverted:** state of bit (0 or 1).

Reference Manual to LL API cross reference:

- CR1 UDIS LL_TIM_IsEnabledUpdateEvent

LL_TIM_SetUpdateSource

Function name

__STATIC_INLINE void LL_TIM_SetUpdateSource (TIM_TypeDef * TIMx, uint32_t UpdateSource)

Function description

Set update event source.

Parameters

- **TIMx:** Timer instance
- **UpdateSource:** This parameter can be one of the following values:
  - LL_TIM_UPDATESOURCE_REGULAR
  - LL_TIM_UPDATESOURCE_COUNTER

Return values

- **None:**

Notes

- Update event source set to LL_TIM_UPDATESOURCE_REGULAR: any of the following events generate an update interrupt or DMA request if enabled: Counter overflow/underflowSetting the UG bitUpdate generation through the slave mode controller
- Update event source set to LL_TIM_UPDATESOURCE_COUNTER: only counter overflow/underflow generates an update interrupt or DMA request if enabled.

Reference Manual to LL API cross reference:

- CR1 URS LL_TIM_SetUpdateSource

LL_TIM_GetUpdateSource

Function name

__STATIC_INLINE uint32_t LL_TIM_GetUpdateSource (const TIM_TypeDef * TIMx)

Function description

Get actual event update source.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_UPDATESOURCE_REGULAR
  - LL_TIM_UPDATESOURCE_COUNTER

Reference Manual to LL API cross reference:

- CR1 URS LL_TIM_GetUpdateSource

LL_TIM_SetOnePulseMode

Function name

__STATIC_INLINE void LL_TIM_SetOnePulseMode (TIM_TypeDef * TIMx, uint32_t OnePulseMode)

Function description

Set one pulse mode (one shot v.s.

Parameters

- **TIMx:** Timer instance
- **OnePulseMode:** This parameter can be one of the following values:
  - LL_TIM_ONEPULSEMODE_SINGLE
  - LL_TIM_ONEPULSEMODE_REPETITIVE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 OPM LL_TIM_SetOnePulseMode

LL_TIM_GetOnePulseMode

Function name

__STATIC_INLINE uint32_t LL_TIM_GetOnePulseMode (const TIM_TypeDef * TIMx)

Function description

Get actual one pulse mode.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_ONEPULSEMODE_SINGLE
  - LL_TIM_ONEPULSEMODE_REPETITIVE

Reference Manual to LL API cross reference:

- CR1 OPM LL_TIM_GetOnePulseMode

LL_TIM_SetCounterMode

Function name

__STATIC_INLINE void LL_TIM_SetCounterMode (TIM_TypeDef * TIMx, uint32_t CounterMode)

Function description

Set the timer counter counting mode.

Parameters

- **TIMx:** Timer instance
- **CounterMode:** This parameter can be one of the following values:
  - LL_TIM_COUNTERMODE_UP
  - LL_TIM_COUNTERMODE_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP
  - LL_TIM_COUNTERMODE_CENTER_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP_DOWN

Return values

- **None:**

Notes

- Macro IS_TIM_COUNTER_MODE_SELECT_INSTANCE(TIMx) can be used to check whether or not the counter mode selection feature is supported by a timer instance.
- Switching from Center Aligned counter mode to Edge counter mode (or reverse) requires a timer reset to avoid unexpected direction due to DIR bit readonly in center aligned mode.

Reference Manual to LL API cross reference:

- CR1 DIR LL_TIM_SetCounterMode
- CR1 CMS LL_TIM_SetCounterMode

LL_TIM_GetCounterMode

Function name

__STATIC_INLINE uint32_t LL_TIM_GetCounterMode (const TIM_TypeDef * TIMx)

Function description

Get actual counter mode.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_COUNTERMODE_UP
  - LL_TIM_COUNTERMODE_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP
  - LL_TIM_COUNTERMODE_CENTER_DOWN
  - LL_TIM_COUNTERMODE_CENTER_UP_DOWN

Notes

- Macro IS_TIM_COUNTER_MODE_SELECT_INSTANCE(TIMx) can be used to check whether or not the counter mode selection feature is supported by a timer instance.

Reference Manual to LL API cross reference:

- CR1 DIR LL_TIM_GetCounterMode
- CR1 CMS LL_TIM_GetCounterMode

LL_TIM_EnableARRPreload

Function name

__STATIC_INLINE void LL_TIM_EnableARRPreload (TIM_TypeDef * TIMx)

Function description

Enable auto-reload (ARR) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ARPE LL_TIM_EnableARRPreload

LL_TIM_DisableARRPreload

Function name

__STATIC_INLINE void LL_TIM_DisableARRPreload (TIM_TypeDef * TIMx)

Function description

Disable auto-reload (ARR) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 ARPE LL_TIM_DisableARRPreload

LL_TIM_IsEnabledARRPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledARRPreload (const TIM_TypeDef * TIMx)

Function description

Indicates whether auto-reload (ARR) preload is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 ARPE LL_TIM_IsEnabledARRPreload

LL_TIM_SetClockDivision

Function name

__STATIC_INLINE void LL_TIM_SetClockDivision (TIM_TypeDef * TIMx, uint32_t ClockDivision)

Function description

Set the division ratio between the timer clock and the sampling clock used by the dead-time generators (when supported) and the digital filters.

Parameters

- **TIMx:** Timer instance
- **ClockDivision:** This parameter can be one of the following values:
  - LL_TIM_CLOCKDIVISION_DIV1
  - LL_TIM_CLOCKDIVISION_DIV2
  - LL_TIM_CLOCKDIVISION_DIV4

Return values

- **None:**

Notes

- Macro IS_TIM_CLOCK_DIVISION_INSTANCE(TIMx) can be used to check whether or not the clock division feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- CR1 CKD LL_TIM_SetClockDivision

LL_TIM_GetClockDivision

Function name

__STATIC_INLINE uint32_t LL_TIM_GetClockDivision (const TIM_TypeDef * TIMx)

Function description

Get the actual division ratio between the timer clock and the sampling clock used by the dead-time generators (when supported) and the digital filters.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_CLOCKDIVISION_DIV1
  - LL_TIM_CLOCKDIVISION_DIV2
  - LL_TIM_CLOCKDIVISION_DIV4

Notes

- Macro IS_TIM_CLOCK_DIVISION_INSTANCE(TIMx) can be used to check whether or not the clock division feature is supported by the timer instance.

Reference Manual to LL API cross reference:

- CR1 CKD LL_TIM_GetClockDivision

LL_TIM_SetCounter

Function name

__STATIC_INLINE void LL_TIM_SetCounter (TIM_TypeDef * TIMx, uint32_t Counter)

Function description

Set the counter value.

Parameters

- **TIMx:** Timer instance
- **Counter:** Counter value (between Min_Data=0 and Max_Data=0xFFFF or 0xFFFFFFFF)

Return values

- **None:**

Notes

- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.

Reference Manual to LL API cross reference:

- CNT CNT LL_TIM_SetCounter

LL_TIM_GetCounter

Function name

__STATIC_INLINE uint32_t LL_TIM_GetCounter (const TIM_TypeDef * TIMx)

Function description

Get the counter value.

Parameters

- **TIMx:** Timer instance

Return values

- **Counter:** value (between Min_Data=0 and Max_Data=0xFFFF or 0xFFFFFFFF)

Notes

- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.

Reference Manual to LL API cross reference:

- CNT CNT LL_TIM_GetCounter

LL_TIM_GetDirection

Function name

__STATIC_INLINE uint32_t LL_TIM_GetDirection (const TIM_TypeDef * TIMx)

Function description

Get the current direction of the counter.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_COUNTERDIRECTION_UP
  - LL_TIM_COUNTERDIRECTION_DOWN

Reference Manual to LL API cross reference:

- CR1 DIR LL_TIM_GetDirection

LL_TIM_SetPrescaler

Function name

__STATIC_INLINE void LL_TIM_SetPrescaler (TIM_TypeDef * TIMx, uint32_t Prescaler)

Function description

Set the prescaler value.

Parameters

- **TIMx:** Timer instance
- **Prescaler:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- The counter clock frequency CK_CNT is equal to fCK_PSC / (PSC[15:0] + 1).
- The prescaler can be changed on the fly as this control register is buffered. The new prescaler ratio is taken into account at the next update event.
- Helper macro __LL_TIM_CALC_PSC can be used to calculate the Prescaler parameter

Reference Manual to LL API cross reference:

- PSC PSC LL_TIM_SetPrescaler

LL_TIM_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_TIM_GetPrescaler (const TIM_TypeDef * TIMx)

Function description

Get the prescaler value.

Parameters

- **TIMx:** Timer instance

Return values

- **Prescaler:** value between Min_Data=0 and Max_Data=65535

Reference Manual to LL API cross reference:

- PSC PSC LL_TIM_GetPrescaler

LL_TIM_SetAutoReload

Function name

__STATIC_INLINE void LL_TIM_SetAutoReload (TIM_TypeDef * TIMx, uint32_t AutoReload)

Function description

Set the auto-reload value.

Parameters

- **TIMx:** Timer instance
- **AutoReload:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- The counter is blocked while the auto-reload value is null.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Helper macro __LL_TIM_CALC_ARR can be used to calculate the AutoReload parameter

Reference Manual to LL API cross reference:

- ARR ARR LL_TIM_SetAutoReload

LL_TIM_GetAutoReload

Function name

__STATIC_INLINE uint32_t LL_TIM_GetAutoReload (const TIM_TypeDef * TIMx)

Function description

Get the auto-reload value.

Parameters

- **TIMx:** Timer instance

Return values

- **Auto-reload:** value

Notes

- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.

Reference Manual to LL API cross reference:

- ARR ARR LL_TIM_GetAutoReload

LL_TIM_SetRepetitionCounter

Function name

__STATIC_INLINE void LL_TIM_SetRepetitionCounter (TIM_TypeDef * TIMx, uint32_t RepetitionCounter)

Function description

Set the repetition counter value.

Parameters

- **TIMx:** Timer instance
- **RepetitionCounter:** between Min_Data=0 and Max_Data=255 or 65535 for advanced timer.

Return values

- **None:**

Notes

- For advanced timer instances RepetitionCounter can be up to 65535.
- Macro IS_TIM_REPETITION_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a repetition counter.

Reference Manual to LL API cross reference:

- RCR REP LL_TIM_SetRepetitionCounter

LL_TIM_GetRepetitionCounter

Function name

__STATIC_INLINE uint32_t LL_TIM_GetRepetitionCounter (const TIM_TypeDef * TIMx)

Function description

Get the repetition counter value.

Parameters

- **TIMx:** Timer instance

Return values

- **Repetition:** counter value

Notes

- Macro IS_TIM_REPETITION_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a repetition counter.

Reference Manual to LL API cross reference:

- RCR REP LL_TIM_GetRepetitionCounter

LL_TIM_EnableUIFRemap

Function name

__STATIC_INLINE void LL_TIM_EnableUIFRemap (TIM_TypeDef * TIMx)

Function description

Force a continuous copy of the update interrupt flag (UIF) into the timer counter register (bit 31).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- This allows both the counter value and a potential roll-over condition signalled by the UIFCPY flag to be read in an atomic way.

Reference Manual to LL API cross reference:

- CR1 UIFREMAP LL_TIM_EnableUIFRemap

LL_TIM_DisableUIFRemap

Function name

__STATIC_INLINE void LL_TIM_DisableUIFRemap (TIM_TypeDef * TIMx)

Function description

Disable update interrupt flag (UIF) remapping.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UIFREMAP LL_TIM_DisableUIFRemap

LL_TIM_IsActiveUIFCPY

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveUIFCPY (const uint32_t Counter)

Function description

Indicate whether update interrupt flag (UIF) copy is set.

Parameters

- **Counter:** Counter value

Return values

- **State:** of bit (1 or 0).

LL_TIM_CC_EnablePreload

Function name

__STATIC_INLINE void LL_TIM_CC_EnablePreload (TIM_TypeDef * TIMx)

Function description

Enable the capture/compare control bits (CCxE, CCxNE and OCxM) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- CCxE, CCxNE and OCxM bits are preloaded, after having been written, they are updated only when a commutation event (COM) occurs.
- Only on channels that have a complementary output.
- Macro IS_TIM_COMMUTATION_EVENT_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to LL API cross reference:

- CR2 CCPC LL_TIM_CC_EnablePreload

LL_TIM_CC_DisablePreload

Function name

__STATIC_INLINE void LL_TIM_CC_DisablePreload (TIM_TypeDef * TIMx)

Function description

Disable the capture/compare control bits (CCxE, CCxNE and OCxM) preload.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_COMMUTATION_EVENT_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to LL API cross reference:

- CR2 CCPC LL_TIM_CC_DisablePreload

LL_TIM_CC_SetUpdate

Function name

__STATIC_INLINE void LL_TIM_CC_SetUpdate (TIM_TypeDef * TIMx, uint32_t CCUpdateSource)

Function description

Set the updated source of the capture/compare control bits (CCxE, CCxNE and OCxM).

Parameters

- **TIMx:** Timer instance
- **CCUpdateSource:** This parameter can be one of the following values:
  - LL_TIM_CCUPDATESOURCE_COMG_ONLY
  - LL_TIM_CCUPDATESOURCE_COMG_AND_TRGI

Return values

- **None:**

Notes

- Macro IS_TIM_COMMUTATION_EVENT_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to LL API cross reference:

- CR2 CCUS LL_TIM_CC_SetUpdate

LL_TIM_CC_SetDMAReqTrigger

Function name

__STATIC_INLINE void LL_TIM_CC_SetDMAReqTrigger (TIM_TypeDef * TIMx, uint32_t DMAReqTrigger)

Function description

Set the trigger of the capture/compare DMA request.

Parameters

- **TIMx:** Timer instance
- **DMAReqTrigger:** This parameter can be one of the following values:
  - LL_TIM_CCDMAREQUEST_CC
  - LL_TIM_CCDMAREQUEST_UPDATE

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 CCDS LL_TIM_CC_SetDMAReqTrigger

LL_TIM_CC_GetDMAReqTrigger

Function name

__STATIC_INLINE uint32_t LL_TIM_CC_GetDMAReqTrigger (const TIM_TypeDef * TIMx)

Function description

Get actual trigger of the capture/compare DMA request.

Parameters

- **TIMx:** Timer instance

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_CCDMAREQUEST_CC
  - LL_TIM_CCDMAREQUEST_UPDATE

Reference Manual to LL API cross reference:

- CR2 CCDS LL_TIM_CC_GetDMAReqTrigger

LL_TIM_CC_SetLockLevel

Function name

__STATIC_INLINE void LL_TIM_CC_SetLockLevel (TIM_TypeDef * TIMx, uint32_t LockLevel)

Function description

Set the lock level to freeze the configuration of several capture/compare parameters.

Parameters

- **TIMx:** Timer instance
- **LockLevel:** This parameter can be one of the following values:
  - LL_TIM_LOCKLEVEL_OFF
  - LL_TIM_LOCKLEVEL_1
  - LL_TIM_LOCKLEVEL_2
  - LL_TIM_LOCKLEVEL_3

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not the lock mechanism is supported by a timer instance.

Reference Manual to LL API cross reference:

- BDTR LOCK LL_TIM_CC_SetLockLevel

LL_TIM_CC_EnableChannel

Function name

__STATIC_INLINE void LL_TIM_CC_EnableChannel (TIM_TypeDef * TIMx, uint32_t Channels)

Function description

Enable capture/compare channels.

Parameters

- **TIMx:** Timer instance
- **Channels:** This parameter can be a combination of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCER CC1E LL_TIM_CC_EnableChannel
- CCER CC1NE LL_TIM_CC_EnableChannel
- CCER CC2E LL_TIM_CC_EnableChannel
- CCER CC2NE LL_TIM_CC_EnableChannel

- CCER CC3NE LL_TIM_CC_EnableChannel
- CCER CC4E LL_TIM_CC_EnableChannel
- CCER CC5E LL_TIM_CC_EnableChannel
- CCER CC6E LL_TIM_CC_EnableChannel

LL_TIM_CC_DisableChannel

Function name

__STATIC_INLINE void LL_TIM_CC_DisableChannel (TIM_TypeDef * TIMx, uint32_t Channels)

Function description

Disable capture/compare channels.

Parameters

- **TIMx:** Timer instance
- **Channels:** This parameter can be a combination of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCER CC1E LL_TIM_CC_DisableChannel
- CCER CC1NE LL_TIM_CC_DisableChannel
- CCER CC2E LL_TIM_CC_DisableChannel
- CCER CC2NE LL_TIM_CC_DisableChannel
- CCER CC3E LL_TIM_CC_DisableChannel
- CCER CC3NE LL_TIM_CC_DisableChannel
- CCER CC4E LL_TIM_CC_DisableChannel
- CCER CC5E LL_TIM_CC_DisableChannel
- CCER CC6E LL_TIM_CC_DisableChannel

LL_TIM_CC_IsEnabledChannel

Function name

__STATIC_INLINE uint32_t LL_TIM_CC_IsEnabledChannel (TIM_TypeDef * TIMx, uint32_t Channels)

Function description

Indicate whether channel(s) is(are) enabled.

Parameters

- **TIMx:** Timer instance
- **Channels:** This parameter can be a combination of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CCER CC1E LL_TIM_CC_IsEnabledChannel
- CCER CC1NE LL_TIM_CC_IsEnabledChannel
- CCER CC2E LL_TIM_CC_IsEnabledChannel

- CCER CC4E LL_TIM_CC_IsEnabledChannel
- CCER CC5E LL_TIM_CC_IsEnabledChannel
- CCER CC6E LL_TIM_CC_IsEnabledChannel

LL_TIM_OC_ConfigOutput

Function name

__STATIC_INLINE void LL_TIM_OC_ConfigOutput (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Configuration)

Function description

Configure an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_TIM_OCPOLARITY_HIGH or LL_TIM_OCPOLARITY_LOW
  - LL_TIM_OCIDLESTATE_LOW or LL_TIM_OCIDLESTATE_HIGH

Return values

- **None:**

Reference Manual to LL API cross reference:

LL_TIM_OC_SetMode

Function name

__STATIC_INLINE void LL_TIM_OC_SetMode (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Mode)

Function description

Define the behavior of the output reference signal OCxREF from which OCx and OCxN (when relevant) are derived.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **Mode:** This parameter can be one of the following values:
  - LL_TIM_OCMODE_FROZEN
  - LL_TIM_OCMODE_ACTIVE
  - LL_TIM_OCMODE_INACTIVE
  - LL_TIM_OCMODE_TOGGLE
  - LL_TIM_OCMODE_FORCED_INACTIVE
  - LL_TIM_OCMODE_FORCED_ACTIVE
  - LL_TIM_OCMODE_PWM1
  - LL_TIM_OCMODE_PWM2
  - LL_TIM_OCMODE_RETRIG_OPM1
  - LL_TIM_OCMODE_RETRIG_OPM2
  - LL_TIM_OCMODE_COMBINED_PWM1
  - LL_TIM_OCMODE_COMBINED_PWM2
  - LL_TIM_OCMODE_ASSYMETRIC_PWM1
  - LL_TIM_OCMODE_ASSYMETRIC_PWM2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 OC1M LL_TIM_OC_SetMode
- CCMR1 OC2M LL_TIM_OC_SetMode
- CCMR2 OC3M LL_TIM_OC_SetMode
- CCMR2 OC4M LL_TIM_OC_SetMode
- CCMR3 OC5M LL_TIM_OC_SetMode
- CCMR3 OC6M LL_TIM_OC_SetMode

LL_TIM_OC_GetMode

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetMode (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the output compare mode of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_OCMODE_FROZEN
  - LL_TIM_OCMODE_ACTIVE
  - LL_TIM_OCMODE_INACTIVE
  - LL_TIM_OCMODE_TOGGLE
  - LL_TIM_OCMODE_FORCED_INACTIVE
  - LL_TIM_OCMODE_FORCED_ACTIVE
  - LL_TIM_OCMODE_PWM1
  - LL_TIM_OCMODE_PWM2
  - LL_TIM_OCMODE_RETRIG_OPM1
  - LL_TIM_OCMODE_RETRIG_OPM2
  - LL_TIM_OCMODE_COMBINED_PWM1
  - LL_TIM_OCMODE_COMBINED_PWM2
  - LL_TIM_OCMODE_ASSYMETRIC_PWM1
  - LL_TIM_OCMODE_ASSYMETRIC_PWM2

- CCMR3 OC6M LL_TIM_OC_GetMode

LL_TIM_OC_SetPolarity

Function name

__STATIC_INLINE void LL_TIM_OC_SetPolarity (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Polarity)

Function description

Set the polarity of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **Polarity:** This parameter can be one of the following values:
  - LL_TIM_OCPOLARITY_HIGH
  - LL_TIM_OCPOLARITY_LOW

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCER CC1P LL_TIM_OC_SetPolarity
- CCER CC1NP LL_TIM_OC_SetPolarity
- CCER CC2P LL_TIM_OC_SetPolarity
- CCER CC2NP LL_TIM_OC_SetPolarity
- CCER CC3P LL_TIM_OC_SetPolarity
- CCER CC3NP LL_TIM_OC_SetPolarity
- CCER CC4P LL_TIM_OC_SetPolarity
- CCER CC5P LL_TIM_OC_SetPolarity
- CCER CC6P LL_TIM_OC_SetPolarity

LL_TIM_OC_GetPolarity

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetPolarity (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the polarity of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_OCPOLARITY_HIGH
  - LL_TIM_OCPOLARITY_LOW

Reference Manual to LL API cross reference:

- CCER CC1P LL_TIM_OC_GetPolarity
- CCER CC1NP LL_TIM_OC_GetPolarity
- CCER CC2P LL_TIM_OC_GetPolarity
- CCER CC2NP LL_TIM_OC_GetPolarity
- CCER CC3P LL_TIM_OC_GetPolarity
- CCER CC3NP LL_TIM_OC_GetPolarity
- CCER CC4P LL_TIM_OC_GetPolarity
- CCER CC5P LL_TIM_OC_GetPolarity
- CCER CC6P LL_TIM_OC_GetPolarity

LL_TIM_OC_SetIdleState

Function name

__STATIC_INLINE void LL_TIM_OC_SetIdleState (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t IdleState)

Function description

Set the IDLE state of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **IdleState:** This parameter can be one of the following values:
  - LL_TIM_OCIDLESTATE_LOW
  - LL_TIM_OCIDLESTATE_HIGH

Return values

- **None:**

Notes

- This function is significant only for the timer instances supporting the break feature. Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

- CR2 OIS6 LL_TIM_OC_SetIdleState

LL_TIM_OC_GetIdleState

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetIdleState (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the IDLE state of an output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH1N
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH2N
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH3N
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_OCIDLESTATE_LOW
  - LL_TIM_OCIDLESTATE_HIGH

Reference Manual to LL API cross reference:

- CR2 OIS1 LL_TIM_OC_GetIdleState

- CR2 OIS3N LL_TIM_OC_GetIdleState
- CR2 OIS4 LL_TIM_OC_GetIdleState
- CR2 OIS5 LL_TIM_OC_GetIdleState
- CR2 OIS6 LL_TIM_OC_GetIdleState

LL_TIM_OC_EnableFast

Function name

__STATIC_INLINE void LL_TIM_OC_EnableFast (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Enable fast mode for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Notes

- Acts only if the channel is configured in PWM1 or PWM2 mode.

Reference Manual to LL API cross reference:

- CCMR1 OC1FE LL_TIM_OC_EnableFast
- CCMR1 OC2FE LL_TIM_OC_EnableFast
- CCMR2 OC3FE LL_TIM_OC_EnableFast

- CCMR3 OC5FE LL_TIM_OC_EnableFast
- CCMR3 OC6FE LL_TIM_OC_EnableFast

LL_TIM_OC_DisableFast

Function name

__STATIC_INLINE void LL_TIM_OC_DisableFast (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Disable fast mode for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

- CCMR3 OC6FE LL_TIM_OC_DisableFast

LL_TIM_OC_IsEnabledFast

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_IsEnabledFast (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Indicates whether fast mode is enabled for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

- CCMR3 OC6FE LL_TIM_OC_IsEnabledFast

LL_TIM_OC_EnablePreload

Function name

__STATIC_INLINE void LL_TIM_OC_EnablePreload (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Enable compare register (TIMx_CCRx) preload for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

LL_TIM_OC_DisablePreload

Function name

__STATIC_INLINE void LL_TIM_OC_DisablePreload (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Disable compare register (TIMx_CCRx) preload for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR3 OC6PE LL_TIM_OC_DisablePreload

LL_TIM_OC_IsEnabledPreload

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_IsEnabledPreload (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Indicates whether compare register (TIMx_CCRx) preload is enabled for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

- CCMR3 OC6PE LL_TIM_OC_IsEnabledPreload

LL_TIM_OC_EnableClear

Function name

__STATIC_INLINE void LL_TIM_OC_EnableClear (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Enable clearing the output channel on an external event.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Notes

- This function can only be used in Output compare and PWM modes. It does not work in Forced mode.
- Macro IS_TIM_OCXREF_CLEAR_INSTANCE(TIMx) can be used to check whether or not a timer instance can clear the OCxREF signal on an external event.

Reference Manual to LL API cross reference:

- CCMR1 OC1CE LL_TIM_OC_EnableClear

- CCMR3 OC6CE LL_TIM_OC_EnableClear

LL_TIM_OC_DisableClear

Function name

__STATIC_INLINE void LL_TIM_OC_DisableClear (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Disable clearing the output channel on an external event.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **None:**

Notes

- Macro IS_TIM_OCXREF_CLEAR_INSTANCE(TIMx) can be used to check whether or not a timer instance can clear the OCxREF signal on an external event.

Reference Manual to LL API cross reference:

- CCMR2 OC3CE LL_TIM_OC_DisableClear
- CCMR2 OC4CE LL_TIM_OC_DisableClear
- CCMR3 OC5CE LL_TIM_OC_DisableClear
- CCMR3 OC6CE LL_TIM_OC_DisableClear

LL_TIM_OC_IsEnabledClear

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_IsEnabledClear (TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Indicates clearing the output channel on an external event is enabled for the output channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6

Return values

- **State:** of bit (1 or 0).

Notes

- This function enables clearing the output channel on an external event.
- This function can only be used in Output compare and PWM modes. It does not work in Forced mode.
- Macro IS_TIM_OCXREF_CLEAR_INSTANCE(TIMx) can be used to check whether or not a timer instance can clear the OCxREF signal on an external event.

- CCMR3 OC6CE LL_TIM_OC_IsEnabledClear

LL_TIM_OC_SetDeadTime

Function name

__STATIC_INLINE void LL_TIM_OC_SetDeadTime (TIM_TypeDef * TIMx, uint32_t DeadTime)

Function description

Set the dead-time delay (delay inserted between the rising edge of the OCxREF signal and the rising edge of the Ocx and OCxN signals).

Parameters

- **TIMx:** Timer instance
- **DeadTime:** between Min_Data=0 and Max_Data=255

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not dead-time insertion feature is supported by a timer instance.
- Helper macro __LL_TIM_CALC_DEADTIME can be used to calculate the DeadTime parameter

Reference Manual to LL API cross reference:

- BDTR DTG LL_TIM_OC_SetDeadTime

LL_TIM_OC_SetCompareCH1

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH1 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 1 (TIMx_CCR1).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC1_INSTANCE(TIMx) can be used to check whether or not output channel 1 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_TIM_OC_SetCompareCH1

LL_TIM_OC_SetCompareCH2

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH2 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 2 (TIMx_CCR2).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC2_INSTANCE(TIMx) can be used to check whether or not output channel 2 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_TIM_OC_SetCompareCH2

LL_TIM_OC_SetCompareCH3

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH3 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 3 (TIMx_CCR3).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC3_INSTANCE(TIMx) can be used to check whether or not output channel is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR3 CCR3 LL_TIM_OC_SetCompareCH3

LL_TIM_OC_SetCompareCH4

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH4 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 4 (TIMx_CCR4).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- In 32-bit timer implementations compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC4_INSTANCE(TIMx) can be used to check whether or not output channel 4 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR4 CCR4 LL_TIM_OC_SetCompareCH4

LL_TIM_OC_SetCompareCH5

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH5 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 5 (TIMx_CCR5).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- Macro IS_TIM_CC5_INSTANCE(TIMx) can be used to check whether or not output channel 5 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR5 CCR5 LL_TIM_OC_SetCompareCH5

LL_TIM_OC_SetCompareCH6

Function name

__STATIC_INLINE void LL_TIM_OC_SetCompareCH6 (TIM_TypeDef * TIMx, uint32_t CompareValue)

Function description

Set compare value for output channel 6 (TIMx_CCR6).

Parameters

- **TIMx:** Timer instance
- **CompareValue:** between Min_Data=0 and Max_Data=65535

Return values

- **None:**

Notes

- Macro IS_TIM_CC6_INSTANCE(TIMx) can be used to check whether or not output channel 6 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR6 CCR6 LL_TIM_OC_SetCompareCH6

LL_TIM_OC_GetCompareCH1

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH1 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR1) set for output channel 1.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC1_INSTANCE(TIMx) can be used to check whether or not output channel 1 is supported by a timer instance.

Reference Manual to LL API cross reference:

LL_TIM_OC_GetCompareCH2

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH2 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR2) set for output channel 2.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC2_INSTANCE(TIMx) can be used to check whether or not output channel 2 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_TIM_OC_GetCompareCH2

LL_TIM_OC_GetCompareCH3

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH3 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR3) set for output channel 3.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC3_INSTANCE(TIMx) can be used to check whether or not output channel 3 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR3 CCR3 LL_TIM_OC_GetCompareCH3

LL_TIM_OC_GetCompareCH4

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH4 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR4) set for output channel 4.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned compare value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC4_INSTANCE(TIMx) can be used to check whether or not output channel 4 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR4 CCR4 LL_TIM_OC_GetCompareCH4

LL_TIM_OC_GetCompareCH5

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH5 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR5) set for output channel 5.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- Macro IS_TIM_CC5_INSTANCE(TIMx) can be used to check whether or not output channel 5 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR5 CCR5 LL_TIM_OC_GetCompareCH5

LL_TIM_OC_GetCompareCH6

Function name

__STATIC_INLINE uint32_t LL_TIM_OC_GetCompareCH6 (const TIM_TypeDef * TIMx)

Function description

Get compare value (TIMx_CCR6) set for output channel 6.

Parameters

- **TIMx:** Timer instance

Return values

- **CompareValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- Macro IS_TIM_CC6_INSTANCE(TIMx) can be used to check whether or not output channel 6 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR6 CCR6 LL_TIM_OC_GetCompareCH6

LL_TIM_SetCH5CombinedChannels

Function name

__STATIC_INLINE void LL_TIM_SetCH5CombinedChannels (TIM_TypeDef * TIMx, uint32_t GroupCH5)

Function description

Select on which reference signal the OC5REF is combined to.

Parameters

- **TIMx:** Timer instance
- **GroupCH5:** This parameter can be a combination of the following values:
  - LL_TIM_GROUPCH5_NONE
  - LL_TIM_GROUPCH5_OC1REFC
  - LL_TIM_GROUPCH5_OC2REFC
  - LL_TIM_GROUPCH5_OC3REFC

Return values

- **None:**

Notes

- Macro IS_TIM_COMBINED3PHASEPWM_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the combined 3-phase PWM mode.

Reference Manual to LL API cross reference:

- CCR5 GC5C3 LL_TIM_SetCH5CombinedChannels

LL_TIM_IC_Config

Function name

__STATIC_INLINE void LL_TIM_IC_Config (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t Configuration)

Function description

Configure input channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **Configuration:** This parameter must be a combination of all the following values:
  - LL_TIM_ACTIVEINPUT_DIRECTTI or LL_TIM_ACTIVEINPUT_INDIRECTTI or LL_TIM_ACTIVEINPUT_TRC
  - LL_TIM_ICPSC_DIV1 or ... or LL_TIM_ICPSC_DIV8
  - LL_TIM_IC_FILTER_FDIV1 or ... or LL_TIM_IC_FILTER_FDIV32_N8
  - LL_TIM_IC_POLARITY_RISING or LL_TIM_IC_POLARITY_FALLING or LL_TIM_IC_POLARITY_BOTHEDGE

Return values

- **None:**

LL_TIM_IC_SetActiveInput

Function name

__STATIC_INLINE void LL_TIM_IC_SetActiveInput (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICActiveInput)

Function description

Set the active input.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICActiveInput:** This parameter can be one of the following values:
  - LL_TIM_ACTIVEINPUT_DIRECTTI
  - LL_TIM_ACTIVEINPUT_INDIRECTTI
  - LL_TIM_ACTIVEINPUT_TRC

Return values

- **None:**

Reference Manual to LL API cross reference:

LL_TIM_IC_GetActiveInput

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetActiveInput (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the current active input.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_ACTIVEINPUT_DIRECTTI
  - LL_TIM_ACTIVEINPUT_INDIRECTTI
  - LL_TIM_ACTIVEINPUT_TRC

Reference Manual to LL API cross reference:

LL_TIM_IC_SetPrescaler

Function name

__STATIC_INLINE void LL_TIM_IC_SetPrescaler (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICPrescaler)

Function description

Set the prescaler of input channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICPrescaler:** This parameter can be one of the following values:
  - LL_TIM_ICPSC_DIV1
  - LL_TIM_ICPSC_DIV2
  - LL_TIM_ICPSC_DIV4
  - LL_TIM_ICPSC_DIV8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CCMR1 IC1PSC LL_TIM_IC_SetPrescaler
- CCMR1 IC2PSC LL_TIM_IC_SetPrescaler
- CCMR2 IC3PSC LL_TIM_IC_SetPrescaler

LL_TIM_IC_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetPrescaler (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the current prescaler value acting on an input channel.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_ICPSC_DIV1
  - LL_TIM_ICPSC_DIV2
  - LL_TIM_ICPSC_DIV4
  - LL_TIM_ICPSC_DIV8

Reference Manual to LL API cross reference:

LL_TIM_IC_SetFilter

Function name

__STATIC_INLINE void LL_TIM_IC_SetFilter (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICFilter)

Function description

Set the input filter duration.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICFilter:** This parameter can be one of the following values:
  - LL_TIM_IC_FILTER_FDIV1
  - LL_TIM_IC_FILTER_FDIV1_N2
  - LL_TIM_IC_FILTER_FDIV1_N4
  - LL_TIM_IC_FILTER_FDIV1_N8
  - LL_TIM_IC_FILTER_FDIV2_N6

LL_TIM_IC_GetFilter

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetFilter (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the input filter duration.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_IC_FILTER_FDIV1
  - LL_TIM_IC_FILTER_FDIV1_N2
  - LL_TIM_IC_FILTER_FDIV1_N4
  - LL_TIM_IC_FILTER_FDIV1_N8
  - LL_TIM_IC_FILTER_FDIV2_N6

LL_TIM_IC_SetPolarity

Function name

__STATIC_INLINE void LL_TIM_IC_SetPolarity (TIM_TypeDef * TIMx, uint32_t Channel, uint32_t ICPolarity)

Function description

Set the input channel polarity.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **ICPolarity:** This parameter can be one of the following values:
  - LL_TIM_IC_POLARITY_RISING
  - LL_TIM_IC_POLARITY_FALLING
  - LL_TIM_IC_POLARITY_BOTHEDGE

Return values

- **None:**

Reference Manual to LL API cross reference:

LL_TIM_IC_GetPolarity

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetPolarity (const TIM_TypeDef * TIMx, uint32_t Channel)

Function description

Get the current input channel polarity.

Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4

Return values

- **Returned:** value can be one of the following values:
  - LL_TIM_IC_POLARITY_RISING
  - LL_TIM_IC_POLARITY_FALLING
  - LL_TIM_IC_POLARITY_BOTHEDGE

Reference Manual to LL API cross reference:

LL_TIM_IC_EnableXORCombination

Function name

__STATIC_INLINE void LL_TIM_IC_EnableXORCombination (TIM_TypeDef * TIMx)

Function description

Connect the TIMx_CH1, CH2 and CH3 pins to the TI1 input (XOR combination).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_XOR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an XOR input.

Reference Manual to LL API cross reference:

- CR2 TI1S LL_TIM_IC_EnableXORCombination

LL_TIM_IC_DisableXORCombination

Function name

__STATIC_INLINE void LL_TIM_IC_DisableXORCombination (TIM_TypeDef * TIMx)

Function description

Disconnect the TIMx_CH1, CH2 and CH3 pins from the TI1 input.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_XOR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an XOR input.

Reference Manual to LL API cross reference:

- CR2 TI1S LL_TIM_IC_DisableXORCombination

LL_TIM_IC_IsEnabledXORCombination

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_IsEnabledXORCombination (TIM_TypeDef * TIMx)

Function description

Indicates whether the TIMx_CH1, CH2 and CH3 pins are connectected to the TI1 input.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_XOR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an XOR input.

Reference Manual to LL API cross reference:

- CR2 TI1S LL_TIM_IC_IsEnabledXORCombination

LL_TIM_IC_GetCaptureCH1

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH1 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 1.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC1_INSTANCE(TIMx) can be used to check whether or not input channel 1 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR1 CCR1 LL_TIM_IC_GetCaptureCH1

LL_TIM_IC_GetCaptureCH2

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH2 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 2.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC2_INSTANCE(TIMx) can be used to check whether or not input channel 2 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR2 CCR2 LL_TIM_IC_GetCaptureCH2

LL_TIM_IC_GetCaptureCH3

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH3 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 3.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC3_INSTANCE(TIMx) can be used to check whether or not input channel 3 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR3 CCR3 LL_TIM_IC_GetCaptureCH3

LL_TIM_IC_GetCaptureCH4

Function name

__STATIC_INLINE uint32_t LL_TIM_IC_GetCaptureCH4 (const TIM_TypeDef * TIMx)

Function description

Get captured value for input channel 4.

Parameters

- **TIMx:** Timer instance

Return values

- **CapturedValue:** (between Min_Data=0 and Max_Data=65535)

Notes

- In 32-bit timer implementations returned captured value can be between 0x00000000 and 0xFFFFFFFF.
- Macro IS_TIM_32B_COUNTER_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
- Macro IS_TIM_CC4_INSTANCE(TIMx) can be used to check whether or not input channel 4 is supported by a timer instance.

Reference Manual to LL API cross reference:

- CCR4 CCR4 LL_TIM_IC_GetCaptureCH4

LL_TIM_EnableExternalClock

Function name

__STATIC_INLINE void LL_TIM_EnableExternalClock (TIM_TypeDef * TIMx)

Function description

Enable external clock mode 2.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- When external clock mode 2 is enabled the counter is clocked by any active edge on the ETRF signal.
- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_EnableExternalClock

LL_TIM_DisableExternalClock

Function name

__STATIC_INLINE void LL_TIM_DisableExternalClock (TIM_TypeDef * TIMx)

Function description

Disable external clock mode 2.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_DisableExternalClock

LL_TIM_IsEnabledExternalClock

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledExternalClock (const TIM_TypeDef * TIMx)

Function description

Indicate whether external clock mode 2 is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR ECE LL_TIM_IsEnabledExternalClock

LL_TIM_SetClockSource

Function name

__STATIC_INLINE void LL_TIM_SetClockSource (TIM_TypeDef * TIMx, uint32_t ClockSource)

Function description

Set the clock source of the counter clock.

Parameters

- **TIMx:** Timer instance
- **ClockSource:** This parameter can be one of the following values:
  - LL_TIM_CLOCKSOURCE_INTERNAL
  - LL_TIM_CLOCKSOURCE_EXT_MODE1
  - LL_TIM_CLOCKSOURCE_EXT_MODE2

Return values

- **None:**

Notes

- when selected clock source is external clock mode 1, the timer input the external clock is applied is selected by calling the LL_TIM_SetTriggerInput() function. This timer input must be configured by calling the LL_TIM_IC_Config() function.
- Macro IS_TIM_CLOCKSOURCE_ETRMODE1_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode1.
- Macro IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx) can be used to check whether or not a timer instance supports external clock mode2.

Reference Manual to LL API cross reference:

- SMCR SMS LL_TIM_SetClockSource
- SMCR ECE LL_TIM_SetClockSource

LL_TIM_SetEncoderMode

Function name

__STATIC_INLINE void LL_TIM_SetEncoderMode (TIM_TypeDef * TIMx, uint32_t EncoderMode)

Function description

Set the encoder interface mode.

Parameters

- **TIMx:** Timer instance
- **EncoderMode:** This parameter can be one of the following values:
  - LL_TIM_ENCODERMODE_X2_TI1
  - LL_TIM_ENCODERMODE_X2_TI2
  - LL_TIM_ENCODERMODE_X4_TI12

Return values

- **None:**

Notes

- Macro IS_TIM_ENCODER_INTERFACE_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the encoder mode.

Reference Manual to LL API cross reference:

- SMCR SMS LL_TIM_SetEncoderMode

LL_TIM_SetTriggerOutput

Function name

__STATIC_INLINE void LL_TIM_SetTriggerOutput (TIM_TypeDef * TIMx, uint32_t TimerSynchronization)

Function description

Set the trigger output (TRGO) used for timer synchronization .

Parameters

- **TIMx:** Timer instance
- **TimerSynchronization:** This parameter can be one of the following values:
  - LL_TIM_TRGO_RESET
  - LL_TIM_TRGO_ENABLE
  - LL_TIM_TRGO_UPDATE
  - LL_TIM_TRGO_CC1IF
  - LL_TIM_TRGO_OC1REF
  - LL_TIM_TRGO_OC2REF
  - LL_TIM_TRGO_OC3REF
  - LL_TIM_TRGO_OC4REF

Return values

- **None:**

Notes

- Macro IS_TIM_MASTER_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a master timer.

Reference Manual to LL API cross reference:

- CR2 MMS LL_TIM_SetTriggerOutput

LL_TIM_SetTriggerOutput2

Function name

__STATIC_INLINE void LL_TIM_SetTriggerOutput2 (TIM_TypeDef * TIMx, uint32_t ADCSynchronization)

Function description

Set the trigger output 2 (TRGO2) used for ADC synchronization .

Parameters

- **TIMx:** Timer Instance
- **ADCSynchronization:** This parameter can be one of the following values:
  - LL_TIM_TRGO2_RESET
  - LL_TIM_TRGO2_ENABLE
  - LL_TIM_TRGO2_UPDATE
  - LL_TIM_TRGO2_CC1F
  - LL_TIM_TRGO2_OC1
  - LL_TIM_TRGO2_OC2
  - LL_TIM_TRGO2_OC3
  - LL_TIM_TRGO2_OC4
  - LL_TIM_TRGO2_OC5
  - LL_TIM_TRGO2_OC6
  - LL_TIM_TRGO2_OC4_RISINGFALLING
  - LL_TIM_TRGO2_OC6_RISINGFALLING
  - LL_TIM_TRGO2_OC4_RISING_OC6_RISING
  - LL_TIM_TRGO2_OC4_RISING_OC6_FALLING
  - LL_TIM_TRGO2_OC5_RISING_OC6_RISING
  - LL_TIM_TRGO2_OC5_RISING_OC6_FALLING

Return values

- **None:**

Notes

- Macro IS_TIM_TRGO2_INSTANCE(TIMx) can be used to check whether or not a timer instance can be used for ADC synchronization.

Reference Manual to LL API cross reference:

- CR2 MMS2 LL_TIM_SetTriggerOutput2

LL_TIM_SetSlaveMode

Function name

__STATIC_INLINE void LL_TIM_SetSlaveMode (TIM_TypeDef * TIMx, uint32_t SlaveMode)

Function description

Set the synchronization mode of a slave timer.

Parameters

- **TIMx:** Timer instance
- **SlaveMode:** This parameter can be one of the following values:
  - LL_TIM_SLAVEMODE_DISABLED
  - LL_TIM_SLAVEMODE_RESET
  - LL_TIM_SLAVEMODE_GATED
  - LL_TIM_SLAVEMODE_TRIGGER
  - LL_TIM_SLAVEMODE_COMBINED_RESETTRIGGER

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR SMS LL_TIM_SetSlaveMode

LL_TIM_SetTriggerInput

Function name

__STATIC_INLINE void LL_TIM_SetTriggerInput (TIM_TypeDef * TIMx, uint32_t TriggerInput)

Function description

Set the selects the trigger input to be used to synchronize the counter.

Parameters

- **TIMx:** Timer instance
- **TriggerInput:** This parameter can be one of the following values:
  - LL_TIM_TS_ITR0
  - LL_TIM_TS_ITR1
  - LL_TIM_TS_ITR2
  - LL_TIM_TS_ITR3
  - LL_TIM_TS_ITR4
  - LL_TIM_TS_ITR5
  - LL_TIM_TS_ITR6
  - LL_TIM_TS_ITR7
  - LL_TIM_TS_ITR8 (*)
  - LL_TIM_TS_ITR9 (*)
  - LL_TIM_TS_ITR10 (*)
  - LL_TIM_TS_ITR11 (*)
  - LL_TIM_TS_ITR12 (*)
  - LL_TIM_TS_ITR13 (*)
  - LL_TIM_TS_TI1F_ED
  - LL_TIM_TS_TI1FP1
  - LL_TIM_TS_TI2FP2
  - LL_TIM_TS_ETRF

  (*) Value not defined in all devices.

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR TS LL_TIM_SetTriggerInput

LL_TIM_EnableMasterSlaveMode

Function name

__STATIC_INLINE void LL_TIM_EnableMasterSlaveMode (TIM_TypeDef * TIMx)

Function description

Enable the Master/Slave mode.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR MSM LL_TIM_EnableMasterSlaveMode

LL_TIM_DisableMasterSlaveMode

Function name

__STATIC_INLINE void LL_TIM_DisableMasterSlaveMode (TIM_TypeDef * TIMx)

Function description

Disable the Master/Slave mode.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR MSM LL_TIM_DisableMasterSlaveMode

LL_TIM_IsEnabledMasterSlaveMode

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledMasterSlaveMode (const TIM_TypeDef * TIMx)

Function description

Indicates whether the Master/Slave mode is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_SLAVE_INSTANCE(TIMx) can be used to check whether or not a timer instance can operate as a slave timer.

Reference Manual to LL API cross reference:

- SMCR MSM LL_TIM_IsEnabledMasterSlaveMode

LL_TIM_ConfigETR

Function name

__STATIC_INLINE void LL_TIM_ConfigETR (TIM_TypeDef * TIMx, uint32_t ETRPolarity, uint32_t ETRPrescaler, uint32_t ETRFilter)

Function description

Configure the external trigger (ETR) input.

Parameters

- **TIMx:** Timer instance
- **ETRPolarity:** This parameter can be one of the following values:
  - LL_TIM_ETR_POLARITY_NONINVERTED
  - LL_TIM_ETR_POLARITY_INVERTED
- **ETRPrescaler:** This parameter can be one of the following values:
  - LL_TIM_ETR_PRESCALER_DIV1
  - LL_TIM_ETR_PRESCALER_DIV2
  - LL_TIM_ETR_PRESCALER_DIV4
  - LL_TIM_ETR_PRESCALER_DIV8
- **ETRFilter:** This parameter can be one of the following values:
  - LL_TIM_ETR_FILTER_FDIV1
  - LL_TIM_ETR_FILTER_FDIV1_N2
  - LL_TIM_ETR_FILTER_FDIV1_N4
  - LL_TIM_ETR_FILTER_FDIV1_N8
  - LL_TIM_ETR_FILTER_FDIV2_N6
  - LL_TIM_ETR_FILTER_FDIV2_N8
  - LL_TIM_ETR_FILTER_FDIV4_N6
  - LL_TIM_ETR_FILTER_FDIV4_N8
  - LL_TIM_ETR_FILTER_FDIV8_N6
  - LL_TIM_ETR_FILTER_FDIV8_N8
  - LL_TIM_ETR_FILTER_FDIV16_N5
  - LL_TIM_ETR_FILTER_FDIV16_N6
  - LL_TIM_ETR_FILTER_FDIV16_N8
  - LL_TIM_ETR_FILTER_FDIV32_N5
  - LL_TIM_ETR_FILTER_FDIV32_N6
  - LL_TIM_ETR_FILTER_FDIV32_N8

Return values

- **None:**

Notes

- Macro IS_TIM_ETR_INSTANCE(TIMx) can be used to check whether or not a timer instance provides an external trigger input.

Reference Manual to LL API cross reference:

- SMCR ETP LL_TIM_ConfigETR
- SMCR ETPS LL_TIM_ConfigETR
- SMCR ETF LL_TIM_ConfigETR

LL_TIM_SetETRSource

Function name

__STATIC_INLINE void LL_TIM_SetETRSource (TIM_TypeDef * TIMx, uint32_t ETRSource)

Function description

Select the external trigger (ETR) input source.

Parameters

- **TIMx:** Timer instance

- **ETRSource:** This parameter can be one of the following values: For TIM1, the parameter is one of the following values:
  - LL_TIM_TIM1_ETRSOURCE_GPIO: TIM1_ETR is connected to GPIO
  - LL_TIM_TIM1_ETRSOURCE_COMP1: TIM1_ETR is connected to COMP1 output
  - LL_TIM_TIM1_ETRSOURCE_COMP2: TIM1_ETR is connected to COMP2 output
  - LL_TIM_TIM1_ETRSOURCE_ADC1_AWD1: TIM1_ETR is connected to ADC1 AWD1
  - LL_TIM_TIM1_ETRSOURCE_ADC1_AWD2: TIM1_ETR is connected to ADC1 AWD2
  - LL_TIM_TIM1_ETRSOURCE_ADC1_AWD3: TIM1_ETR is connected to ADC1 AWD3
  - LL_TIM_TIM1_ETRSOURCE_ADC3_AWD1: TIM1_ETR is connected to ADC3 AWD1
  - LL_TIM_TIM1_ETRSOURCE_ADC3_AWD2: TIM1_ETR is connected to ADC3 AWD2
  - LL_TIM_TIM1_ETRSOURCE_ADC3_AWD3: TIM1_ETR is connected to ADC3 AWD3

  For TIM2, the parameter is one of the following values:
  - LL_TIM_TIM2_ETRSOURCE_GPIO: TIM2_ETR is connected to GPIO
  - LL_TIM_TIM2_ETRSOURCE_COMP1: TIM2_ETR is connected to COMP1 output
  - LL_TIM_TIM2_ETRSOURCE_COMP2: TIM2_ETR is connected to COMP2 output
  - LL_TIM_TIM2_ETRSOURCE_LSE: TIM2_ETR is connected to LSE
  - LL_TIM_TIM2_ETRSOURCE_SAI1_FSA: TIM2_ETR is connected to SAI1 FS_A
  - LL_TIM_TIM2_ETRSOURCE_SAI1_FSB: TIM2_ETR is connected to SAI1 FS_B

  For TIM3, the parameter is one of the following values:
  - LL_TIM_TIM3_ETRSOURCE_GPIO: TIM3_ETR is connected to GPIO
  - LL_TIM_TIM3_ETRSOURCE_COMP1: TIM3_ETR is connected to COMP1 output

  For TIM5, the parameter is one of the following values:
  - LL_TIM_TIM5_ETRSOURCE_GPIO: TIM5_ETR is connected to GPIO
  - LL_TIM_TIM5_ETRSOURCE_SAI2_FSA: TIM5_ETR is connected to SAI2 FS_A (*)
  - LL_TIM_TIM5_ETRSOURCE_SAI2_FSB: TIM5_ETR is connected to SAI2 FS_B (*)
  - LL_TIM_TIM5_ETRSOURCE_SAI4_FSA: TIM5_ETR is connected to SAI2 FS_A (*)
  - LL_TIM_TIM5_ETRSOURCE_SAI4_FSB: TIM5_ETR is connected to SAI2 FS_B (*)

  For TIM8, the parameter is one of the following values:
  - LL_TIM_TIM8_ETRSOURCE_GPIO: TIM8_ETR is connected to GPIO
  - LL_TIM_TIM8_ETRSOURCE_COMP1: TIM8_ETR is connected to COMP1 output
  - LL_TIM_TIM8_ETRSOURCE_COMP2: TIM8_ETR is connected to COMP2 output
  - LL_TIM_TIM8_ETRSOURCE_ADC2_AWD1: TIM8_ETR is connected to ADC2 AWD1
  - LL_TIM_TIM8_ETRSOURCE_ADC2_AWD2: TIM8_ETR is connected to ADC2 AWD2
  - LL_TIM_TIM8_ETRSOURCE_ADC2_AWD3: TIM8_ETR is connected to ADC2 AWD3
  - LL_TIM_TIM8_ETRSOURCE_ADC3_AWD1: TIM8_ETR is connected to ADC3 AWD1
  - LL_TIM_TIM8_ETRSOURCE_ADC3_AWD2: TIM8_ETR is connected to ADC3 AWD2
  - LL_TIM_TIM8_ETRSOURCE_ADC3_AWD3: TIM8_ETR is connected to ADC3 AWD3

  For TIM23, the parameter is one of the following values: (*)
  - LL_TIM_TIM23_ETRSOURCE_GPIO TIM23_ETR is connected to GPIO
  - LL_TIM_TIM23_ETRSOURCE_COMP1 TIM23_ETR is connected to COMP1 output
  - LL_TIM_TIM23_ETRSOURCE_COMP2 TIM23_ETR is connected to COMP2 output

  For TIM24, the parameter is one of the following values: (*)
  - LL_TIM_TIM24_ETRSOURCE_GPIO TIM24_ETR is connected to GPIO
  - LL_TIM_TIM24_ETRSOURCE_SAI4_FSA TIM24_ETR is connected to SAI4 FS_A
  - LL_TIM_TIM24_ETRSOURCE_SAI4_FSB TIM24_ETR is connected to SAI4 FS_B
  - LL_TIM_TIM24_ETRSOURCE_SAI1_FSA TIM24_ETR is connected to SAI1 FS_A
  - LL_TIM_TIM24_ETRSOURCE_SAI1_FSB TIM24_ETR is connected to SAI1 FS_B

  (*) Value not defined in all devices.

Return values

- **None:**

Notes

- Macro IS_TIM_ETRSEL_INSTANCE(TIMx) can be used to check whether or not a timer instance supports ETR source selection.

Reference Manual to LL API cross reference:

- AF1 ETRSEL LL_TIM_SetETRSource

LL_TIM_EnableBRK

Function name

__STATIC_INLINE void LL_TIM_EnableBRK (TIM_TypeDef * TIMx)

Function description

Enable the break function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR BKE LL_TIM_EnableBRK

LL_TIM_DisableBRK

Function name

__STATIC_INLINE void LL_TIM_DisableBRK (TIM_TypeDef * TIMx)

Function description

Disable the break function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR BKE LL_TIM_DisableBRK

LL_TIM_ConfigBRK

Function name

__STATIC_INLINE void LL_TIM_ConfigBRK (TIM_TypeDef * TIMx, uint32_t BreakPolarity, uint32_t BreakFilter)

Function description

Configure the break input.

Parameters

- **TIMx:** Timer instance
- **BreakPolarity:** This parameter can be one of the following values:
  - LL_TIM_BREAK_POLARITY_LOW
  - LL_TIM_BREAK_POLARITY_HIGH
- **BreakFilter:** This parameter can be one of the following values:
  - LL_TIM_BREAK_FILTER_FDIV1
  - LL_TIM_BREAK_FILTER_FDIV1_N2
  - LL_TIM_BREAK_FILTER_FDIV1_N4
  - LL_TIM_BREAK_FILTER_FDIV1_N8
  - LL_TIM_BREAK_FILTER_FDIV2_N6
  - LL_TIM_BREAK_FILTER_FDIV2_N8
  - LL_TIM_BREAK_FILTER_FDIV4_N6
  - LL_TIM_BREAK_FILTER_FDIV4_N8
  - LL_TIM_BREAK_FILTER_FDIV8_N6
  - LL_TIM_BREAK_FILTER_FDIV8_N8
  - LL_TIM_BREAK_FILTER_FDIV16_N5
  - LL_TIM_BREAK_FILTER_FDIV16_N6
  - LL_TIM_BREAK_FILTER_FDIV16_N8
  - LL_TIM_BREAK_FILTER_FDIV32_N5
  - LL_TIM_BREAK_FILTER_FDIV32_N6
  - LL_TIM_BREAK_FILTER_FDIV32_N8

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR BKP LL_TIM_ConfigBRK
- BDTR BKF LL_TIM_ConfigBRK

LL_TIM_EnableBRK2

Function name

__STATIC_INLINE void LL_TIM_EnableBRK2 (TIM_TypeDef * TIMx)

Function description

Enable the break 2 function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

Reference Manual to LL API cross reference:

- BDTR BK2E LL_TIM_EnableBRK2

LL_TIM_DisableBRK2

Function name

__STATIC_INLINE void LL_TIM_DisableBRK2 (TIM_TypeDef * TIMx)

Function description

Disable the break 2 function.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

Reference Manual to LL API cross reference:

- BDTR BK2E LL_TIM_DisableBRK2

LL_TIM_ConfigBRK2

Function name

__STATIC_INLINE void LL_TIM_ConfigBRK2 (TIM_TypeDef * TIMx, uint32_t Break2Polarity, uint32_t Break2Filter)

Function description

Configure the break 2 input.

Parameters

- **TIMx:** Timer instance
- **Break2Polarity:** This parameter can be one of the following values:
  - LL_TIM_BREAK2_POLARITY_LOW
  - LL_TIM_BREAK2_POLARITY_HIGH
- **Break2Filter:** This parameter can be one of the following values:
  - LL_TIM_BREAK2_FILTER_FDIV1
  - LL_TIM_BREAK2_FILTER_FDIV1_N2
  - LL_TIM_BREAK2_FILTER_FDIV1_N4
  - LL_TIM_BREAK2_FILTER_FDIV1_N8
  - LL_TIM_BREAK2_FILTER_FDIV2_N6
  - LL_TIM_BREAK2_FILTER_FDIV2_N8
  - LL_TIM_BREAK2_FILTER_FDIV4_N6
  - LL_TIM_BREAK2_FILTER_FDIV4_N8
  - LL_TIM_BREAK2_FILTER_FDIV8_N6
  - LL_TIM_BREAK2_FILTER_FDIV8_N8
  - LL_TIM_BREAK2_FILTER_FDIV16_N5
  - LL_TIM_BREAK2_FILTER_FDIV16_N6
  - LL_TIM_BREAK2_FILTER_FDIV16_N8
  - LL_TIM_BREAK2_FILTER_FDIV32_N5
  - LL_TIM_BREAK2_FILTER_FDIV32_N6
  - LL_TIM_BREAK2_FILTER_FDIV32_N8

Return values

- **None:**

Notes

- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

Reference Manual to LL API cross reference:

- BDTR BK2P LL_TIM_ConfigBRK2

LL_TIM_SetOffStates

Function name

__STATIC_INLINE void LL_TIM_SetOffStates (TIM_TypeDef * TIMx, uint32_t OffStateIdle, uint32_t OffStateRun)

Function description

Select the outputs off state (enabled v.s.

Parameters

- **TIMx:** Timer instance
- **OffStateIdle:** This parameter can be one of the following values:
  - LL_TIM_OSSI_DISABLE
  - LL_TIM_OSSI_ENABLE
- **OffStateRun:** This parameter can be one of the following values:
  - LL_TIM_OSSR_DISABLE
  - LL_TIM_OSSR_ENABLE

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR OSSI LL_TIM_SetOffStates
- BDTR OSSR LL_TIM_SetOffStates

LL_TIM_EnableAutomaticOutput

Function name

__STATIC_INLINE void LL_TIM_EnableAutomaticOutput (TIM_TypeDef * TIMx)

Function description

Enable automatic output (MOE can be set by software or automatically when a break input is active).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR AOE LL_TIM_EnableAutomaticOutput

LL_TIM_DisableAutomaticOutput

Function name

__STATIC_INLINE void LL_TIM_DisableAutomaticOutput (TIM_TypeDef * TIMx)

Function description

Disable automatic output (MOE can be set only by software).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR AOE LL_TIM_DisableAutomaticOutput

LL_TIM_IsEnabledAutomaticOutput

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledAutomaticOutput (const TIM_TypeDef * TIMx)

Function description

Indicate whether automatic output is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR AOE LL_TIM_IsEnabledAutomaticOutput

LL_TIM_EnableAllOutputs

Function name

__STATIC_INLINE void LL_TIM_EnableAllOutputs (TIM_TypeDef * TIMx)

Function description

Enable the outputs (set the MOE bit in TIMx_BDTR register).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The MOE bit in TIMx_BDTR register allows to enable /disable the outputs by software and is reset in case of break or break2 event
- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR MOE LL_TIM_EnableAllOutputs

LL_TIM_DisableAllOutputs

Function name

__STATIC_INLINE void LL_TIM_DisableAllOutputs (TIM_TypeDef * TIMx)

Function description

Disable the outputs (reset the MOE bit in TIMx_BDTR register).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Notes

- The MOE bit in TIMx_BDTR register allows to enable /disable the outputs by software and is reset in case of break or break2 event.
- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR MOE LL_TIM_DisableAllOutputs

LL_TIM_IsEnabledAllOutputs

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledAllOutputs (const TIM_TypeDef * TIMx)

Function description

Indicates whether outputs are enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

Reference Manual to LL API cross reference:

- BDTR MOE LL_TIM_IsEnabledAllOutputs

LL_TIM_EnableBreakInputSource

Function name

__STATIC_INLINE void LL_TIM_EnableBreakInputSource (TIM_TypeDef * TIMx, uint32_t BreakInput, uint32_t Source)

Function description

Enable the signals connected to the designated timer break input.

Parameters

- **TIMx:** Timer instance
- **BreakInput:** This parameter can be one of the following values:
  - LL_TIM_BREAK_INPUT_BKIN
  - LL_TIM_BREAK_INPUT_BKIN2
- **Source:** This parameter can be one of the following values:
  - LL_TIM_BKIN_SOURCE_BKIN
  - LL_TIM_BKIN_SOURCE_BKCOMP1
  - LL_TIM_BKIN_SOURCE_BKCOMP2
  - LL_TIM_BKIN_SOURCE_DF1BK

Return values

- **None:**

Notes

- Macro IS_TIM_BREAKSOURCE_INSTANCE(TIMx) can be used to check whether or not a timer instance allows for break input selection.

Reference Manual to LL API cross reference:

- AF1 BKINE LL_TIM_EnableBreakInputSource
- AF1 BKCMP1E LL_TIM_EnableBreakInputSource
- AF1 BKCMP2E LL_TIM_EnableBreakInputSource
- AF1 BKDF1BK0E LL_TIM_EnableBreakInputSource
- AF2 BK2INE LL_TIM_EnableBreakInputSource
- AF2 BK2CMP1E LL_TIM_EnableBreakInputSource
- AF2 BK2CMP2E LL_TIM_EnableBreakInputSource
- AF2 BK2DF1BK1E LL_TIM_EnableBreakInputSource

LL_TIM_DisableBreakInputSource

Function name

__STATIC_INLINE void LL_TIM_DisableBreakInputSource (TIM_TypeDef * TIMx, uint32_t BreakInput, uint32_t Source)

Function description

Disable the signals connected to the designated timer break input.

Parameters

- **TIMx:** Timer instance
- **BreakInput:** This parameter can be one of the following values:
  - LL_TIM_BREAK_INPUT_BKIN
  - LL_TIM_BREAK_INPUT_BKIN2
- **Source:** This parameter can be one of the following values:
  - LL_TIM_BKIN_SOURCE_BKIN
  - LL_TIM_BKIN_SOURCE_BKCOMP1
  - LL_TIM_BKIN_SOURCE_BKCOMP2
  - LL_TIM_BKIN_SOURCE_DF1BK

Return values

- **None:**

Notes

- Macro IS_TIM_BREAKSOURCE_INSTANCE(TIMx) can be used to check whether or not a timer instance allows for break input selection.

Reference Manual to LL API cross reference:

LL_TIM_SetBreakInputSourcePolarity

Function name

__STATIC_INLINE void LL_TIM_SetBreakInputSourcePolarity (TIM_TypeDef * TIMx, uint32_t BreakInput, uint32_t Source, uint32_t Polarity)

Function description

Set the polarity of the break signal for the timer break input.

Parameters

- **TIMx:** Timer instance
- **BreakInput:** This parameter can be one of the following values:
  - LL_TIM_BREAK_INPUT_BKIN
  - LL_TIM_BREAK_INPUT_BKIN2
- **Source:** This parameter can be one of the following values:
  - LL_TIM_BKIN_SOURCE_BKIN
  - LL_TIM_BKIN_SOURCE_BKCOMP1
  - LL_TIM_BKIN_SOURCE_BKCOMP2
- **Polarity:** This parameter can be one of the following values:
  - LL_TIM_BKIN_POLARITY_LOW
  - LL_TIM_BKIN_POLARITY_HIGH

Return values

- **None:**

Notes

- Macro IS_TIM_BREAKSOURCE_INSTANCE(TIMx) can be used to check whether or not a timer instance allows for break input selection.

Reference Manual to LL API cross reference:

- AF1 BKINP LL_TIM_SetBreakInputSourcePolarity
- AF1 BKCMP1P LL_TIM_SetBreakInputSourcePolarity
- AF1 BKCMP2P LL_TIM_SetBreakInputSourcePolarity
- AF2 BK2INP LL_TIM_SetBreakInputSourcePolarity
- AF2 BK2CMP1P LL_TIM_SetBreakInputSourcePolarity
- AF2 BK2CMP2P LL_TIM_SetBreakInputSourcePolarity

LL_TIM_ConfigDMABurst

Function name

__STATIC_INLINE void LL_TIM_ConfigDMABurst (TIM_TypeDef * TIMx, uint32_t DMABurstBaseAddress, uint32_t DMABurstLength)

Function description

Configures the timer DMA burst feature.

Parameters

- **TIMx:** Timer instance
- **DMABurstBaseAddress:** This parameter can be one of the following values:
  - LL_TIM_DMABURST_BASEADDR_CR1
  - LL_TIM_DMABURST_BASEADDR_CR2
  - LL_TIM_DMABURST_BASEADDR_SMCR
  - LL_TIM_DMABURST_BASEADDR_DIER
  - LL_TIM_DMABURST_BASEADDR_SR
  - LL_TIM_DMABURST_BASEADDR_EGR
  - LL_TIM_DMABURST_BASEADDR_CCMR1
  - LL_TIM_DMABURST_BASEADDR_CCMR2
  - LL_TIM_DMABURST_BASEADDR_CCER
  - LL_TIM_DMABURST_BASEADDR_CNT
  - LL_TIM_DMABURST_BASEADDR_PSC
  - LL_TIM_DMABURST_BASEADDR_ARR
  - LL_TIM_DMABURST_BASEADDR_RCR
  - LL_TIM_DMABURST_BASEADDR_CCR1
  - LL_TIM_DMABURST_BASEADDR_CCR2
  - LL_TIM_DMABURST_BASEADDR_CCR3
  - LL_TIM_DMABURST_BASEADDR_CCR4
  - LL_TIM_DMABURST_BASEADDR_BDTR
  - LL_TIM_DMABURST_BASEADDR_CCMR3
  - LL_TIM_DMABURST_BASEADDR_CCR5
  - LL_TIM_DMABURST_BASEADDR_CCR6
  - LL_TIM_DMABURST_BASEADDR_AF1
  - LL_TIM_DMABURST_BASEADDR_AF2
  - LL_TIM_DMABURST_BASEADDR_TISEL
- **DMABurstLength:** This parameter can be one of the following values:
  - LL_TIM_DMABURST_LENGTH_1TRANSFER
  - LL_TIM_DMABURST_LENGTH_2TRANSFERS
  - LL_TIM_DMABURST_LENGTH_3TRANSFERS
  - LL_TIM_DMABURST_LENGTH_4TRANSFERS
  - LL_TIM_DMABURST_LENGTH_5TRANSFERS
  - LL_TIM_DMABURST_LENGTH_6TRANSFERS
  - LL_TIM_DMABURST_LENGTH_7TRANSFERS
  - LL_TIM_DMABURST_LENGTH_8TRANSFERS
  - LL_TIM_DMABURST_LENGTH_9TRANSFERS
  - LL_TIM_DMABURST_LENGTH_10TRANSFERS
  - LL_TIM_DMABURST_LENGTH_11TRANSFERS
  - LL_TIM_DMABURST_LENGTH_12TRANSFERS
  - LL_TIM_DMABURST_LENGTH_13TRANSFERS
  - LL_TIM_DMABURST_LENGTH_14TRANSFERS
  - LL_TIM_DMABURST_LENGTH_15TRANSFERS
  - LL_TIM_DMABURST_LENGTH_16TRANSFERS
  - LL_TIM_DMABURST_LENGTH_17TRANSFERS
  - LL_TIM_DMABURST_LENGTH_18TRANSFERS

Return values

- **None:**

Notes

- Macro IS_TIM_DMABURST_INSTANCE(TIMx) can be used to check whether or not a timer instance supports the DMA burst mode.

Reference Manual to LL API cross reference:

- DCR DBL LL_TIM_ConfigDMABurst
- DCR DBA LL_TIM_ConfigDMABurst

LL_TIM_SetRemap

Function name

__STATIC_INLINE void LL_TIM_SetRemap (TIM_TypeDef * TIMx, uint32_t Remap)

Function description

Remap TIM inputs (input channel, internal/external triggers).

Return values

- **None:**

Notes

- Macro IS_TIM_REMAP_INSTANCE(TIMx) can be used to check whether or not a some timer inputs can be remapped. TIM1: one of the following values: LL_TIM_TIM1_TI1_RMP_GPIO: TIM1 TI1 is connected to GPIO LL_TIM_TIM1_TI1_RMP_COMP1: TIM1 TI1 is connected to COMP1 output TIM2: one of the following values: LL_TIM_TIM2_TI4_RMP_GPIO: TIM2 TI4 is connected to GPIO LL_TIM_TIM2_TI4_RMP_COMP1: TIM2 TI4 is connected to COMP1 output LL_TIM_TIM2_TI4_RMP_COMP2: TIM2 TI4 is connected to COMP2 output LL_TIM_TIM2_TI4_RMP_COMP1_COMP2: TIM2 TI4 is connected to logical OR between COMP1 and COMP2 output TIM3: one of the following values: LL_TIM_TIM3_TI1_RMP_GPIO: TIM3 TI1 is connected to GPIO LL_TIM_TIM3_TI1_RMP_COMP1: TIM3 TI1 is connected to COMP1 output LL_TIM_TIM3_TI1_RMP_COMP2: TIM3 TI1 is connected to COMP2 output LL_TIM_TIM3_TI1_RMP_COMP1_COMP2: TIM3 TI1 is connected to logical OR between COMP1 and COMP2 output TIM5: one of the following values: LL_TIM_TIM5_TI1_RMP_GPIO: TIM5 TI1 is connected to GPIO LL_TIM_TIM5_TI1_RMP_CAN_TMP: TIM5 TI1 is connected to CAN TMP LL_TIM_TIM5_TI1_RMP_CAN_RTP: TIM5 TI1 is connected to CAN RTP TIM8: one of the following values: LL_TIM_TIM8_TI1_RMP_GPIO: TIM8 TI1 is connected to GPIO LL_TIM_TIM8_TI1_RMP_COMP2: TIM8 TI1 is connected to COMP2 output TIM12: one of the following values: (*) LL_TIM_TIM12_TI1_RMP_GPIO: TIM12 TI1 is connected to GPIO LL_TIM_TIM12_TI1_RMP_SPDIF_FS: TIM12 TI1 is connected to SPDIF FS TIM15: one of the following values: LL_TIM_TIM15_TI1_RMP_GPIO: TIM15 TI1 is connected to GPIO LL_TIM_TIM15_TI1_RMP_TIM2: TIM15 TI1 is connected to TIM2 CH1 LL_TIM_TIM15_TI1_RMP_TIM3: TIM15 TI1 is connected to TIM3 CH1 LL_TIM_TIM15_TI1_RMP_TIM4: TIM15 TI1 is connected to TIM4 CH1 LL_TIM_TIM15_TI1_RMP_LSE: TIM15 TI1 is connected to LSE LL_TIM_TIM15_TI1_RMP_CSI: TIM15 TI1 is connected to CSI LL_TIM_TIM15_TI1_RMP_MCO2: TIM15 TI1 is connected to MCO2 LL_TIM_TIM15_TI2_RMP_GPIO: TIM15 TI2 is connected to GPIO LL_TIM_TIM15_TI2_RMP_TIM2: TIM15 TI2 is connected to TIM2 CH2 LL_TIM_TIM15_TI2_RMP_TIM3: TIM15 TI2 is connected to TIM3 CH2 LL_TIM_TIM15_TI2_RMP_TIM4: TIM15 TI2 is connected to TIM4 CH2 TIM16: one of the following values: LL_TIM_TIM16_TI1_RMP_GPIO: TIM16 TI1 is connected to GPIO LL_TIM_TIM16_TI1_RMP_LSI: TIM16 TI1 is connected to LSI LL_TIM_TIM16_TI1_RMP_LSE: TIM16 TI1 is connected to LSE LL_TIM_TIM16_TI1_RMP_RTC: TIM16 TI1 is connected to RTC wakeup interrupt TIM17: one of the following values: LL_TIM_TIM17_TI1_RMP_GPIO: TIM17 TI1 is connected to GPIO LL_TIM_TIM17_TI1_RMP_SPDIF_FS: TIM17 TI1 is connected to SPDIF FS (*) LL_TIM_TIM17_TI1_RMP_HSE_1MHZ: TIM17 TI1 is connected to HSE 1MHz LL_TIM_TIM17_TI1_RMP_MCO1: TIM17 TI1 is connected to MCO1 TIM23: one of the following values: (*) LL_TIM_TIM23_TI4_RMP_GPIO TIM23_TI4 is connected to GPIO LL_TIM_TIM23_TI4_RMP_COMP1 TIM23_TI4 is connected to COMP1 output LL_TIM_TIM23_TI4_RMP_COMP2 TIM23_TI4 is connected to COMP2 output LL_TIM_TIM23_TI4_RMP_COMP1_COMP2 TIM23_TI4 is connected to COMP2 output TIM24: one of the following values: (*) LL_TIM_TIM24_TI1_RMP_GPIO TIM24_TI1 is connected to GPIO LL_TIM_TIM24_TI1_RMP_CAN_TMP TIM24_TI1 is connected to CAN_TMP LL_TIM_TIM24_TI1_RMP_CAN_RTP TIM24_TI1 is connected to CAN_RTP LL_TIM_TIM24_TI1_RMP_CAN_SOC TIM24_TI1 is connected to CAN_SOC (*) Value not defined in all devices.

LL_TIM_ClearFlag_UPDATE

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_UPDATE (TIM_TypeDef * TIMx)

Function description

Clear the update interrupt flag (UIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR UIF LL_TIM_ClearFlag_UPDATE

LL_TIM_IsActiveFlag_UPDATE

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_UPDATE (const TIM_TypeDef * TIMx)

Function description

Indicate whether update interrupt flag (UIF) is set (update interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR UIF LL_TIM_IsActiveFlag_UPDATE

LL_TIM_ClearFlag_CC1

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC1 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 1 interrupt flag (CC1F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC1IF LL_TIM_ClearFlag_CC1

LL_TIM_IsActiveFlag_CC1

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC1 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 1 interrupt flag (CC1F) is set (Capture/Compare 1 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC1IF LL_TIM_IsActiveFlag_CC1

LL_TIM_ClearFlag_CC2

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC2 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 2 interrupt flag (CC2F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC2IF LL_TIM_ClearFlag_CC2

LL_TIM_IsActiveFlag_CC2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC2 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 2 interrupt flag (CC2F) is set (Capture/Compare 2 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC2IF LL_TIM_IsActiveFlag_CC2

LL_TIM_ClearFlag_CC3

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC3 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 3 interrupt flag (CC3F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC3IF LL_TIM_ClearFlag_CC3

LL_TIM_IsActiveFlag_CC3

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC3 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 3 interrupt flag (CC3F) is set (Capture/Compare 3 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC3IF LL_TIM_IsActiveFlag_CC3

LL_TIM_ClearFlag_CC4

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC4 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 4 interrupt flag (CC4F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC4IF LL_TIM_ClearFlag_CC4

LL_TIM_IsActiveFlag_CC4

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC4 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 4 interrupt flag (CC4F) is set (Capture/Compare 4 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC4IF LL_TIM_IsActiveFlag_CC4

LL_TIM_ClearFlag_CC5

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC5 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 5 interrupt flag (CC5F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC5IF LL_TIM_ClearFlag_CC5

LL_TIM_IsActiveFlag_CC5

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC5 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 5 interrupt flag (CC5F) is set (Capture/Compare 5 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC5IF LL_TIM_IsActiveFlag_CC5

LL_TIM_ClearFlag_CC6

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC6 (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 6 interrupt flag (CC6F).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC6IF LL_TIM_ClearFlag_CC6

LL_TIM_IsActiveFlag_CC6

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC6 (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 6 interrupt flag (CC6F) is set (Capture/Compare 6 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC6IF LL_TIM_IsActiveFlag_CC6

LL_TIM_ClearFlag_COM

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_COM (TIM_TypeDef * TIMx)

Function description

Clear the commutation interrupt flag (COMIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR COMIF LL_TIM_ClearFlag_COM

LL_TIM_IsActiveFlag_COM

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_COM (const TIM_TypeDef * TIMx)

Function description

Indicate whether commutation interrupt flag (COMIF) is set (commutation interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR COMIF LL_TIM_IsActiveFlag_COM

LL_TIM_ClearFlag_TRIG

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_TRIG (TIM_TypeDef * TIMx)

Function description

Clear the trigger interrupt flag (TIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR TIF LL_TIM_ClearFlag_TRIG

LL_TIM_IsActiveFlag_TRIG

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_TRIG (const TIM_TypeDef * TIMx)

Function description

Indicate whether trigger interrupt flag (TIF) is set (trigger interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR TIF LL_TIM_IsActiveFlag_TRIG

LL_TIM_ClearFlag_BRK

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_BRK (TIM_TypeDef * TIMx)

Function description

Clear the break interrupt flag (BIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR BIF LL_TIM_ClearFlag_BRK

LL_TIM_IsActiveFlag_BRK

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_BRK (const TIM_TypeDef * TIMx)

Function description

Indicate whether break interrupt flag (BIF) is set (break interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR BIF LL_TIM_IsActiveFlag_BRK

LL_TIM_ClearFlag_BRK2

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_BRK2 (TIM_TypeDef * TIMx)

Function description

Clear the break 2 interrupt flag (B2IF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR B2IF LL_TIM_ClearFlag_BRK2

LL_TIM_IsActiveFlag_BRK2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_BRK2 (const TIM_TypeDef * TIMx)

Function description

Indicate whether break 2 interrupt flag (B2IF) is set (break 2 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR B2IF LL_TIM_IsActiveFlag_BRK2

LL_TIM_ClearFlag_CC1OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC1OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 1 over-capture interrupt flag (CC1OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC1OF LL_TIM_ClearFlag_CC1OVR

LL_TIM_IsActiveFlag_CC1OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC1OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 1 over-capture interrupt flag (CC1OF) is set (Capture/Compare 1 interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC1OF LL_TIM_IsActiveFlag_CC1OVR

LL_TIM_ClearFlag_CC2OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC2OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 2 over-capture interrupt flag (CC2OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC2OF LL_TIM_ClearFlag_CC2OVR

LL_TIM_IsActiveFlag_CC2OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC2OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 2 over-capture interrupt flag (CC2OF) is set (Capture/Compare 2 over-capture interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC2OF LL_TIM_IsActiveFlag_CC2OVR

LL_TIM_ClearFlag_CC3OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC3OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 3 over-capture interrupt flag (CC3OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC3OF LL_TIM_ClearFlag_CC3OVR

LL_TIM_IsActiveFlag_CC3OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC3OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 3 over-capture interrupt flag (CC3OF) is set (Capture/Compare 3 over-capture interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC3OF LL_TIM_IsActiveFlag_CC3OVR

LL_TIM_ClearFlag_CC4OVR

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_CC4OVR (TIM_TypeDef * TIMx)

Function description

Clear the Capture/Compare 4 over-capture interrupt flag (CC4OF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR CC4OF LL_TIM_ClearFlag_CC4OVR

LL_TIM_IsActiveFlag_CC4OVR

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC4OVR (const TIM_TypeDef * TIMx)

Function description

Indicate whether Capture/Compare 4 over-capture interrupt flag (CC4OF) is set (Capture/Compare 4 over-capture interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR CC4OF LL_TIM_IsActiveFlag_CC4OVR

LL_TIM_ClearFlag_SYSBRK

Function name

__STATIC_INLINE void LL_TIM_ClearFlag_SYSBRK (TIM_TypeDef * TIMx)

Function description

Clear the system break interrupt flag (SBIF).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR SBIF LL_TIM_ClearFlag_SYSBRK

LL_TIM_IsActiveFlag_SYSBRK

Function name

__STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_SYSBRK (const TIM_TypeDef * TIMx)

Function description

Indicate whether system break interrupt flag (SBIF) is set (system break interrupt is pending).

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- SR SBIF LL_TIM_IsActiveFlag_SYSBRK

LL_TIM_EnableIT_UPDATE

Function name

__STATIC_INLINE void LL_TIM_EnableIT_UPDATE (TIM_TypeDef * TIMx)

Function description

Enable update interrupt (UIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UIE LL_TIM_EnableIT_UPDATE

LL_TIM_DisableIT_UPDATE

Function name

__STATIC_INLINE void LL_TIM_DisableIT_UPDATE (TIM_TypeDef * TIMx)

Function description

Disable update interrupt (UIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UIE LL_TIM_DisableIT_UPDATE

LL_TIM_IsEnabledIT_UPDATE

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_UPDATE (const TIM_TypeDef * TIMx)

Function description

Indicates whether the update interrupt (UIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER UIE LL_TIM_IsEnabledIT_UPDATE

LL_TIM_EnableIT_CC1

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC1 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 1 interrupt (CC1IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_TIM_EnableIT_CC1

LL_TIM_DisableIT_CC1

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC1 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 1 interrupt (CC1IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1IE LL_TIM_DisableIT_CC1

LL_TIM_IsEnabledIT_CC1

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC1 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 1 interrupt (CC1IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1IE LL_TIM_IsEnabledIT_CC1

LL_TIM_EnableIT_CC2

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC2 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 2 interrupt (CC2IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_TIM_EnableIT_CC2

LL_TIM_DisableIT_CC2

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC2 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 2 interrupt (CC2IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2IE LL_TIM_DisableIT_CC2

LL_TIM_IsEnabledIT_CC2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC2 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 2 interrupt (CC2IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2IE LL_TIM_IsEnabledIT_CC2

LL_TIM_EnableIT_CC3

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC3 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 3 interrupt (CC3IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3IE LL_TIM_EnableIT_CC3

LL_TIM_DisableIT_CC3

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC3 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 3 interrupt (CC3IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3IE LL_TIM_DisableIT_CC3

LL_TIM_IsEnabledIT_CC3

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC3 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 3 interrupt (CC3IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC3IE LL_TIM_IsEnabledIT_CC3

LL_TIM_EnableIT_CC4

Function name

__STATIC_INLINE void LL_TIM_EnableIT_CC4 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 4 interrupt (CC4IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4IE LL_TIM_EnableIT_CC4

LL_TIM_DisableIT_CC4

Function name

__STATIC_INLINE void LL_TIM_DisableIT_CC4 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 4 interrupt (CC4IE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4IE LL_TIM_DisableIT_CC4

LL_TIM_IsEnabledIT_CC4

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_CC4 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 4 interrupt (CC4IE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC4IE LL_TIM_IsEnabledIT_CC4

LL_TIM_EnableIT_COM

Function name

__STATIC_INLINE void LL_TIM_EnableIT_COM (TIM_TypeDef * TIMx)

Function description

Enable commutation interrupt (COMIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMIE LL_TIM_EnableIT_COM

LL_TIM_DisableIT_COM

Function name

__STATIC_INLINE void LL_TIM_DisableIT_COM (TIM_TypeDef * TIMx)

Function description

Disable commutation interrupt (COMIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMIE LL_TIM_DisableIT_COM

LL_TIM_IsEnabledIT_COM

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_COM (const TIM_TypeDef * TIMx)

Function description

Indicates whether the commutation interrupt (COMIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER COMIE LL_TIM_IsEnabledIT_COM

LL_TIM_EnableIT_TRIG

Function name

__STATIC_INLINE void LL_TIM_EnableIT_TRIG (TIM_TypeDef * TIMx)

Function description

Enable trigger interrupt (TIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TIE LL_TIM_EnableIT_TRIG

LL_TIM_DisableIT_TRIG

Function name

__STATIC_INLINE void LL_TIM_DisableIT_TRIG (TIM_TypeDef * TIMx)

Function description

Disable trigger interrupt (TIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TIE LL_TIM_DisableIT_TRIG

LL_TIM_IsEnabledIT_TRIG

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_TRIG (const TIM_TypeDef * TIMx)

Function description

Indicates whether the trigger interrupt (TIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER TIE LL_TIM_IsEnabledIT_TRIG

LL_TIM_EnableIT_BRK

Function name

__STATIC_INLINE void LL_TIM_EnableIT_BRK (TIM_TypeDef * TIMx)

Function description

Enable break interrupt (BIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER BIE LL_TIM_EnableIT_BRK

LL_TIM_DisableIT_BRK

Function name

__STATIC_INLINE void LL_TIM_DisableIT_BRK (TIM_TypeDef * TIMx)

Function description

Disable break interrupt (BIE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER BIE LL_TIM_DisableIT_BRK

LL_TIM_IsEnabledIT_BRK

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_BRK (const TIM_TypeDef * TIMx)

Function description

Indicates whether the break interrupt (BIE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER BIE LL_TIM_IsEnabledIT_BRK

LL_TIM_EnableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_UPDATE (TIM_TypeDef * TIMx)

Function description

Enable update DMA request (UDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UDE LL_TIM_EnableDMAReq_UPDATE

LL_TIM_DisableDMAReq_UPDATE

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_UPDATE (TIM_TypeDef * TIMx)

Function description

Disable update DMA request (UDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER UDE LL_TIM_DisableDMAReq_UPDATE

LL_TIM_IsEnabledDMAReq_UPDATE

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_UPDATE (const TIM_TypeDef * TIMx)

Function description

Indicates whether the update DMA request (UDE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER UDE LL_TIM_IsEnabledDMAReq_UPDATE

LL_TIM_EnableDMAReq_CC1

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC1 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 1 DMA request (CC1DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_TIM_EnableDMAReq_CC1

LL_TIM_DisableDMAReq_CC1

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC1 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 1 DMA request (CC1DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC1DE LL_TIM_DisableDMAReq_CC1

LL_TIM_IsEnabledDMAReq_CC1

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC1 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 1 DMA request (CC1DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC1DE LL_TIM_IsEnabledDMAReq_CC1

LL_TIM_EnableDMAReq_CC2

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC2 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 2 DMA request (CC2DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_TIM_EnableDMAReq_CC2

LL_TIM_DisableDMAReq_CC2

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC2 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 2 DMA request (CC2DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC2DE LL_TIM_DisableDMAReq_CC2

LL_TIM_IsEnabledDMAReq_CC2

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC2 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 2 DMA request (CC2DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC2DE LL_TIM_IsEnabledDMAReq_CC2

LL_TIM_EnableDMAReq_CC3

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC3 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 3 DMA request (CC3DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3DE LL_TIM_EnableDMAReq_CC3

LL_TIM_DisableDMAReq_CC3

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC3 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 3 DMA request (CC3DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC3DE LL_TIM_DisableDMAReq_CC3

LL_TIM_IsEnabledDMAReq_CC3

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC3 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 3 DMA request (CC3DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC3DE LL_TIM_IsEnabledDMAReq_CC3

LL_TIM_EnableDMAReq_CC4

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_CC4 (TIM_TypeDef * TIMx)

Function description

Enable capture/compare 4 DMA request (CC4DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4DE LL_TIM_EnableDMAReq_CC4

LL_TIM_DisableDMAReq_CC4

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_CC4 (TIM_TypeDef * TIMx)

Function description

Disable capture/compare 4 DMA request (CC4DE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER CC4DE LL_TIM_DisableDMAReq_CC4

LL_TIM_IsEnabledDMAReq_CC4

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_CC4 (const TIM_TypeDef * TIMx)

Function description

Indicates whether the capture/compare 4 DMA request (CC4DE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER CC4DE LL_TIM_IsEnabledDMAReq_CC4

LL_TIM_EnableDMAReq_COM

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_COM (TIM_TypeDef * TIMx)

Function description

Enable commutation DMA request (COMDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMDE LL_TIM_EnableDMAReq_COM

LL_TIM_DisableDMAReq_COM

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_COM (TIM_TypeDef * TIMx)

Function description

Disable commutation DMA request (COMDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER COMDE LL_TIM_DisableDMAReq_COM

LL_TIM_IsEnabledDMAReq_COM

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_COM (const TIM_TypeDef * TIMx)

Function description

Indicates whether the commutation DMA request (COMDE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER COMDE LL_TIM_IsEnabledDMAReq_COM

LL_TIM_EnableDMAReq_TRIG

Function name

__STATIC_INLINE void LL_TIM_EnableDMAReq_TRIG (TIM_TypeDef * TIMx)

Function description

Enable trigger interrupt (TDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TDE LL_TIM_EnableDMAReq_TRIG

LL_TIM_DisableDMAReq_TRIG

Function name

__STATIC_INLINE void LL_TIM_DisableDMAReq_TRIG (TIM_TypeDef * TIMx)

Function description

Disable trigger interrupt (TDE).

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- DIER TDE LL_TIM_DisableDMAReq_TRIG

LL_TIM_IsEnabledDMAReq_TRIG

Function name

__STATIC_INLINE uint32_t LL_TIM_IsEnabledDMAReq_TRIG (const TIM_TypeDef * TIMx)

Function description

Indicates whether the trigger interrupt (TDE) is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- DIER TDE LL_TIM_IsEnabledDMAReq_TRIG

LL_TIM_GenerateEvent_UPDATE

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_UPDATE (TIM_TypeDef * TIMx)

Function description

Generate an update event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR UG LL_TIM_GenerateEvent_UPDATE

LL_TIM_GenerateEvent_CC1

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC1 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 1 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC1G LL_TIM_GenerateEvent_CC1

LL_TIM_GenerateEvent_CC2

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC2 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 2 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC2G LL_TIM_GenerateEvent_CC2

LL_TIM_GenerateEvent_CC3

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC3 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 3 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC3G LL_TIM_GenerateEvent_CC3

LL_TIM_GenerateEvent_CC4

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_CC4 (TIM_TypeDef * TIMx)

Function description

Generate Capture/Compare 4 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR CC4G LL_TIM_GenerateEvent_CC4

LL_TIM_GenerateEvent_COM

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_COM (TIM_TypeDef * TIMx)

Function description

Generate commutation event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR COMG LL_TIM_GenerateEvent_COM

LL_TIM_GenerateEvent_TRIG

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_TRIG (TIM_TypeDef * TIMx)

Function description

Generate trigger event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR TG LL_TIM_GenerateEvent_TRIG

LL_TIM_GenerateEvent_BRK

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_BRK (TIM_TypeDef * TIMx)

Function description

Generate break event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR BG LL_TIM_GenerateEvent_BRK

LL_TIM_GenerateEvent_BRK2

Function name

__STATIC_INLINE void LL_TIM_GenerateEvent_BRK2 (TIM_TypeDef * TIMx)

Function description

Generate break 2 event.

Parameters

- **TIMx:** Timer instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- EGR B2G LL_TIM_GenerateEvent_BRK2

LL_TIM_DeInit

Function name

ErrorStatus LL_TIM_DeInit (TIM_TypeDef * TIMx)

Function description

Set TIMx registers to their reset values.

Parameters

- **TIMx:** Timer instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: invalid TIMx instance

LL_TIM_StructInit

Function name

void LL_TIM_StructInit (LL_TIM_InitTypeDef * TIM_InitStruct)

Function description

Set the fields of the time base unit configuration data structure to their default values.

Parameters

- **TIM_InitStruct:** pointer to a LL_TIM_InitTypeDef structure (time base unit configuration data structure)

Return values

- **None:**

LL_TIM_Init

Function name

ErrorStatus LL_TIM_Init (TIM_TypeDef * TIMx, const LL_TIM_InitTypeDef * TIM_InitStruct)

Function description

Configure the TIMx time base unit.

Parameters

- **TIMx:** Timer Instance
- **TIM_InitStruct:** pointer to a LL_TIM_InitTypeDef structure (TIMx time base unit configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: not applicable

LL_TIM_OC_StructInit

Function name

void LL_TIM_OC_StructInit (LL_TIM_OC_InitTypeDef * TIM_OC_InitStruct)

Function description

Set the fields of the TIMx output channel configuration data structure to their default values.

Parameters

- **TIM_OC_InitStruct:** pointer to a LL_TIM_OC_InitTypeDef structure (the output channel configuration data structure)

Return values

- **None:**

LL_TIM_OC_Init

Function name

ErrorStatus LL_TIM_OC_Init (TIM_TypeDef * TIMx, uint32_t Channel, const LL_TIM_OC_InitTypeDef * TIM_OC_InitStruct)

Function description

Configure the TIMx output channel.

Parameters

- **TIMx:** Timer Instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
  - LL_TIM_CHANNEL_CH5
  - LL_TIM_CHANNEL_CH6
- **TIM_OC_InitStruct:** pointer to a LL_TIM_OC_InitTypeDef structure (TIMx output channel configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx output channel is initialized
  - ERROR: TIMx output channel is not initialized

LL_TIM_IC_StructInit

Function name

void LL_TIM_IC_StructInit (LL_TIM_IC_InitTypeDef * TIM_ICInitStruct)

Function description

Set the fields of the TIMx input channel configuration data structure to their default values.

Parameters

- **TIM_ICInitStruct:** pointer to a LL_TIM_IC_InitTypeDef structure (the input channel configuration data structure)

Return values

- **None:**

LL_TIM_IC_Init

Function name

ErrorStatus LL_TIM_IC_Init (TIM_TypeDef * TIMx, uint32_t Channel, const LL_TIM_IC_InitTypeDef * TIM_IC_InitStruct)

Function description

Configure the TIMx input channel.

Parameters

- **TIMx:** Timer Instance
- **Channel:** This parameter can be one of the following values:
  - LL_TIM_CHANNEL_CH1
  - LL_TIM_CHANNEL_CH2
  - LL_TIM_CHANNEL_CH3
  - LL_TIM_CHANNEL_CH4
- **TIM_IC_InitStruct:** pointer to a LL_TIM_IC_InitTypeDef structure (TIMx input channel configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx output channel is initialized
  - ERROR: TIMx output channel is not initialized

LL_TIM_ENCODER_StructInit

Function name

void LL_TIM_ENCODER_StructInit (LL_TIM_ENCODER_InitTypeDef * TIM_EncoderInitStruct)

Function description

Fills each TIM_EncoderInitStruct field with its default value.

Parameters

- **TIM_EncoderInitStruct:** pointer to a LL_TIM_ENCODER_InitTypeDef structure (encoder interface configuration data structure)

Return values

- **None:**

LL_TIM_ENCODER_Init

Function name

ErrorStatus LL_TIM_ENCODER_Init (TIM_TypeDef * TIMx, const LL_TIM_ENCODER_InitTypeDef * TIM_EncoderInitStruct)

Function description

Configure the encoder interface of the timer instance.

Parameters

- **TIMx:** Timer Instance
- **TIM_EncoderInitStruct:** pointer to a LL_TIM_ENCODER_InitTypeDef structure (TIMx encoder interface configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: not applicable

LL_TIM_HALLSENSOR_StructInit

Function name

void LL_TIM_HALLSENSOR_StructInit (LL_TIM_HALLSENSOR_InitTypeDef * TIM_HallSensorInitStruct)

Function description

Set the fields of the TIMx Hall sensor interface configuration data structure to their default values.

Parameters

- **TIM_HallSensorInitStruct:** pointer to a LL_TIM_HALLSENSOR_InitTypeDef structure (HALL sensor interface configuration data structure)

Return values

- **None:**

LL_TIM_HALLSENSOR_Init

Function name

ErrorStatus LL_TIM_HALLSENSOR_Init (TIM_TypeDef * TIMx, const LL_TIM_HALLSENSOR_InitTypeDef * TIM_HallSensorInitStruct)

Function description

Configure the Hall sensor interface of the timer instance.

Parameters

- **TIMx:** Timer Instance
- **TIM_HallSensorInitStruct:** pointer to a LL_TIM_HALLSENSOR_InitTypeDef structure (TIMx HALL sensor interface configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: TIMx registers are de-initialized
  - ERROR: not applicable

Notes

- TIMx CH1, CH2 and CH3 inputs connected through a XOR to the TI1 input channel
- TIMx slave mode controller is configured in reset mode. Selected internal trigger is TI1F_ED.
- Channel 1 is configured as input, IC1 is mapped on TRC.
- Captured value stored in TIMx_CCR1 correspond to the time elapsed between 2 changes on the inputs. It gives information about motor speed.
- Channel 2 is configured in output PWM 2 mode.
- Compare value stored in TIMx_CCR2 corresponds to the commutation delay.
- OC2REF is selected as trigger output on TRGO.
- LL_TIM_IC_POLARITY_BOTHEDGE must not be used for TI1 when it is used when TIMx operates in Hall sensor interface mode.

LL_TIM_BDTR_StructInit

Function name

void LL_TIM_BDTR_StructInit (LL_TIM_BDTR_InitTypeDef * TIM_BDTRInitStruct)

Function description

Set the fields of the Break and Dead Time configuration data structure to their default values.

Parameters

- **TIM_BDTRInitStruct:** pointer to a LL_TIM_BDTR_InitTypeDef structure (Break and Dead Time configuration data structure)

Return values

- **None:**

LL_TIM_BDTR_Init

Function name

ErrorStatus LL_TIM_BDTR_Init (TIM_TypeDef * TIMx, const LL_TIM_BDTR_InitTypeDef * TIM_BDTRInitStruct)

Function description

Configure the Break and Dead Time feature of the timer instance.

Parameters

- **TIMx:** Timer Instance
- **TIM_BDTRInitStruct:** pointer to a LL_TIM_BDTR_InitTypeDef structure (Break and Dead Time configuration data structure)

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: Break and Dead Time is initialized
  - ERROR: not applicable

Notes

- As the bits BK2P, BK2E, BK2F[3:0], BKF[3:0], AOE, BKP, BKE, OSSI, OSSR and DTG[7:0] can be write-locked depending on the LOCK configuration, it can be necessary to configure all of them during the first write access to the TIMx_BDTR register.
- Macro IS_TIM_BREAK_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.
- Macro IS_TIM_BKIN2_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

126.3 TIM Firmware driver defines

The following section lists the various define and macros of the module.

126.3.1 TIM

TIM

Active Input Selection

LL_TIM_ACTIVEINPUT_DIRECTTI

ICx is mapped on TIx

LL_TIM_ACTIVEINPUT_INDIRECTTI

ICx is mapped on TIy

LL_TIM_ACTIVEINPUT_TRC

ICx is mapped on TRC

Automatic output enable

LL_TIM_AUTOMATICOUTPUT_DISABLE

MOE can be set only by software

LL_TIM_AUTOMATICOUTPUT_ENABLE

MOE can be set by software or automatically at the next update event

BKIN POLARITY

LL_TIM_BKIN_POLARITY_LOW

BRK BKIN input is active low

LL_TIM_BKIN_POLARITY_HIGH

BRK BKIN input is active high

BKIN SOURCE

LL_TIM_BKIN_SOURCE_BKIN

BKIN input from AF controller

LL_TIM_BKIN_SOURCE_BKCOMP1

internal signal: COMP1 output

LL_TIM_BKIN_SOURCE_BKCOMP2

internal signal: COMP2 output

LL_TIM_BKIN_SOURCE_DF1BK

internal signal: DFSDM1 break output

Break2 Enable

LL_TIM_BREAK2_DISABLE

Break2 function disabled

LL_TIM_BREAK2_ENABLE

Break2 function enabled

BREAK2 FILTER

LL_TIM_BREAK2_FILTER_FDIV1

No filter, BRK acts asynchronously

LL_TIM_BREAK2_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_BREAK2_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_BREAK2_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_BREAK2_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_BREAK2_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_BREAK2_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_BREAK2_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_BREAK2_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_BREAK2_FILTER_FDIV8_N8

fSAMPLING=fDTS/8, N=8

LL_TIM_BREAK2_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_BREAK2_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_BREAK2_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_BREAK2_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_BREAK2_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_BREAK2_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

BREAK2 POLARITY

LL_TIM_BREAK2_POLARITY_LOW

Break input BRK2 is active low

LL_TIM_BREAK2_POLARITY_HIGH

Break input BRK2 is active high

Break Enable

LL_TIM_BREAK_DISABLE

Break function disabled

LL_TIM_BREAK_ENABLE

Break function enabled

break filter

LL_TIM_BREAK_FILTER_FDIV1

No filter, BRK acts asynchronously

LL_TIM_BREAK_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_BREAK_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_BREAK_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_BREAK_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_BREAK_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_BREAK_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_BREAK_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_BREAK_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_BREAK_FILTER_FDIV8_N8

fSAMPLING=fDTS/8, N=8

LL_TIM_BREAK_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_BREAK_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_BREAK_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_BREAK_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_BREAK_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_BREAK_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

BREAK INPUT

LL_TIM_BREAK_INPUT_BKIN

TIMx_BKIN input

LL_TIM_BREAK_INPUT_BKIN2

TIMx_BKIN2 input

break polarity

LL_TIM_BREAK_POLARITY_LOW

Break input BRK is active low

LL_TIM_BREAK_POLARITY_HIGH

Break input BRK is active high

Capture Compare DMA Request

LL_TIM_CCDMAREQUEST_CC

CCx DMA request sent when CCx event occurs

LL_TIM_CCDMAREQUEST_UPDATE

CCx DMA requests sent when update event occurs

Capture Compare Update Source

LL_TIM_CCUPDATESOURCE_COMG_ONLY

Capture/compare control bits are updated by setting the COMG bit only

LL_TIM_CCUPDATESOURCE_COMG_AND_TRGI

Capture/compare control bits are updated by setting the COMG bit or when a rising edge occurs on trigger input (TRGI)

Channel

LL_TIM_CHANNEL_CH1

Timer input/output channel 1

LL_TIM_CHANNEL_CH1N

Timer complementary output channel 1

LL_TIM_CHANNEL_CH2

Timer input/output channel 2

LL_TIM_CHANNEL_CH2N

Timer complementary output channel 2

LL_TIM_CHANNEL_CH3

Timer input/output channel 3

LL_TIM_CHANNEL_CH3N

Timer complementary output channel 3

LL_TIM_CHANNEL_CH4

Timer input/output channel 4

LL_TIM_CHANNEL_CH5

Timer output channel 5

LL_TIM_CHANNEL_CH6

Timer output channel 6

Clock Division

LL_TIM_CLOCKDIVISION_DIV1

tDTS=tCK_INT

LL_TIM_CLOCKDIVISION_DIV2

tDTS=2*tCK_INT

LL_TIM_CLOCKDIVISION_DIV4

tDTS=4*tCK_INT

Clock Source

LL_TIM_CLOCKSOURCE_INTERNAL

The timer is clocked by the internal clock provided from the RCC

LL_TIM_CLOCKSOURCE_EXT_MODE1

Counter counts at each rising or falling edge on a selected input

LL_TIM_CLOCKSOURCE_EXT_MODE2

Counter counts at each rising or falling edge on the external trigger input ETR

Counter Direction

LL_TIM_COUNTERDIRECTION_UP

Timer counter counts up

LL_TIM_COUNTERDIRECTION_DOWN

Timer counter counts down

Counter Mode

LL_TIM_COUNTERMODE_UP

Counter used as upcounter

LL_TIM_COUNTERMODE_DOWN

Counter used as downcounter

LL_TIM_COUNTERMODE_CENTER_DOWN

The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting down.

LL_TIM_COUNTERMODE_CENTER_UP

The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting up

LL_TIM_COUNTERMODE_CENTER_UP_DOWN

The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting up or down.

DMA Burst Base Address

LL_TIM_DMABURST_BASEADDR_CR1

TIMx_CR1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CR2

TIMx_CR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_SMCR

TIMx_SMCR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_DIER

TIMx_DIER register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_SR

TIMx_SR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_EGR

TIMx_EGR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCMR1

TIMx_CCMR1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCMR2

TIMx_CCMR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCER

TIMx_CCER register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CNT

TIMx_CNT register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_PSC

TIMx_PSC register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_ARR

TIMx_ARR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_RCR

TIMx_RCR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR1

TIMx_CCR1 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR2

TIMx_CCR2 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR3

TIMx_CCR3 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR4

TIMx_CCR4 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_BDTR

TIMx_BDTR register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCMR3

TIMx_CCMR3 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR5

TIMx_CCR5 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_CCR6

TIMx_CCR6 register is the DMA base address for DMA burst

LL_TIM_DMABURST_BASEADDR_TISEL

TIMx_TISEL register is the DMA base address for DMA burst

DMA Burst Length

LL_TIM_DMABURST_LENGTH_1TRANSFER

Transfer is done to 1 register starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_2TRANSFERS

Transfer is done to 2 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_3TRANSFERS

Transfer is done to 3 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_4TRANSFERS

Transfer is done to 4 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_5TRANSFERS

Transfer is done to 5 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_6TRANSFERS

Transfer is done to 6 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_7TRANSFERS

Transfer is done to 7 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_8TRANSFERS

Transfer is done to 1 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_9TRANSFERS

Transfer is done to 9 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_10TRANSFERS

Transfer is done to 10 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_11TRANSFERS

Transfer is done to 11 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_12TRANSFERS

Transfer is done to 12 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_13TRANSFERS

Transfer is done to 13 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_14TRANSFERS

Transfer is done to 14 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_15TRANSFERS

Transfer is done to 15 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_16TRANSFERS

Transfer is done to 16 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_17TRANSFERS

Transfer is done to 17 registers starting from the DMA burst base address

LL_TIM_DMABURST_LENGTH_18TRANSFERS

Transfer is done to 18 registers starting from the DMA burst base address

Encoder Mode

LL_TIM_ENCODERMODE_X2_TI1

Quadrature encoder mode 1, x2 mode - Counter counts up/down on TI1FP1 edge depending on TI2FP2 level

LL_TIM_ENCODERMODE_X2_TI2

Quadrature encoder mode 2, x2 mode - Counter counts up/down on TI2FP2 edge depending on TI1FP1 level

LL_TIM_ENCODERMODE_X4_TI12

Quadrature encoder mode 3, x4 mode - Counter counts up/down on both TI1FP1 and TI2FP2 edges depending on the level of the other input

External Trigger Filter

LL_TIM_ETR_FILTER_FDIV1

No filter, sampling is done at fDTS

LL_TIM_ETR_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_ETR_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_ETR_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_ETR_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_ETR_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_ETR_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_ETR_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_ETR_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=8

LL_TIM_ETR_FILTER_FDIV8_N8

fSAMPLING=fDTS/16, N=5

LL_TIM_ETR_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=6

LL_TIM_ETR_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=8

LL_TIM_ETR_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=5

LL_TIM_ETR_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_ETR_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_ETR_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

External Trigger Polarity

LL_TIM_ETR_POLARITY_NONINVERTED

ETR is non-inverted, active at high level or rising edge

LL_TIM_ETR_POLARITY_INVERTED

ETR is inverted, active at low level or falling edge

External Trigger Prescaler

LL_TIM_ETR_PRESCALER_DIV1

ETR prescaler OFF

LL_TIM_ETR_PRESCALER_DIV2

ETR frequency is divided by 2

LL_TIM_ETR_PRESCALER_DIV4

ETR frequency is divided by 4

LL_TIM_ETR_PRESCALER_DIV8

ETR frequency is divided by 8

Get Flags Defines

LL_TIM_SR_UIF

Update interrupt flag

LL_TIM_SR_CC1IF

Capture/compare 1 interrupt flag

LL_TIM_SR_CC2IF

Capture/compare 2 interrupt flag

LL_TIM_SR_CC3IF

Capture/compare 3 interrupt flag

LL_TIM_SR_CC4IF

Capture/compare 4 interrupt flag

LL_TIM_SR_CC5IF

Capture/compare 5 interrupt flag

LL_TIM_SR_CC6IF

Capture/compare 6 interrupt flag

LL_TIM_SR_COMIF

COM interrupt flag

LL_TIM_SR_TIF

Trigger interrupt flag

LL_TIM_SR_BIF

Break interrupt flag

LL_TIM_SR_B2IF

Second break interrupt flag

LL_TIM_SR_CC1OF

Capture/Compare 1 overcapture flag

LL_TIM_SR_CC2OF

Capture/Compare 2 overcapture flag

LL_TIM_SR_CC3OF

Capture/Compare 3 overcapture flag

LL_TIM_SR_CC4OF

Capture/Compare 4 overcapture flag

LL_TIM_SR_SBIF

System Break interrupt flag

GROUPCH5

LL_TIM_GROUPCH5_NONE

No effect of OC5REF on OC1REFC, OC2REFC and OC3REFC

LL_TIM_GROUPCH5_OC1REFC

OC1REFC is the logical AND of OC1REFC and OC5REF

LL_TIM_GROUPCH5_OC2REFC

OC2REFC is the logical AND of OC2REFC and OC5REF

LL_TIM_GROUPCH5_OC3REFC

OC3REFC is the logical AND of OC3REFC and OC5REF

Input Configuration Prescaler

LL_TIM_ICPSC_DIV1

No prescaler, capture is done each time an edge is detected on the capture input

LL_TIM_ICPSC_DIV2

Capture is done once every 2 events

LL_TIM_ICPSC_DIV4

Capture is done once every 4 events

LL_TIM_ICPSC_DIV8

Capture is done once every 8 events

Input Configuration Filter

LL_TIM_IC_FILTER_FDIV1

No filter, sampling is done at fDTS

LL_TIM_IC_FILTER_FDIV1_N2

fSAMPLING=fCK_INT, N=2

LL_TIM_IC_FILTER_FDIV1_N4

fSAMPLING=fCK_INT, N=4

LL_TIM_IC_FILTER_FDIV1_N8

fSAMPLING=fCK_INT, N=8

LL_TIM_IC_FILTER_FDIV2_N6

fSAMPLING=fDTS/2, N=6

LL_TIM_IC_FILTER_FDIV2_N8

fSAMPLING=fDTS/2, N=8

LL_TIM_IC_FILTER_FDIV4_N6

fSAMPLING=fDTS/4, N=6

LL_TIM_IC_FILTER_FDIV4_N8

fSAMPLING=fDTS/4, N=8

LL_TIM_IC_FILTER_FDIV8_N6

fSAMPLING=fDTS/8, N=6

LL_TIM_IC_FILTER_FDIV8_N8

fSAMPLING=fDTS/8, N=8

LL_TIM_IC_FILTER_FDIV16_N5

fSAMPLING=fDTS/16, N=5

LL_TIM_IC_FILTER_FDIV16_N6

fSAMPLING=fDTS/16, N=6

LL_TIM_IC_FILTER_FDIV16_N8

fSAMPLING=fDTS/16, N=8

LL_TIM_IC_FILTER_FDIV32_N5

fSAMPLING=fDTS/32, N=5

LL_TIM_IC_FILTER_FDIV32_N6

fSAMPLING=fDTS/32, N=6

LL_TIM_IC_FILTER_FDIV32_N8

fSAMPLING=fDTS/32, N=8

Input Configuration Polarity

LL_TIM_IC_POLARITY_RISING

The circuit is sensitive to TIxFP1 rising edge, TIxFP1 is not inverted

LL_TIM_IC_POLARITY_FALLING

The circuit is sensitive to TIxFP1 falling edge, TIxFP1 is inverted

LL_TIM_IC_POLARITY_BOTHEDGE

The circuit is sensitive to both TIxFP1 rising and falling edges, TIxFP1 is not inverted

IT Defines

LL_TIM_DIER_UIE

Update interrupt enable

LL_TIM_DIER_CC1IE

Capture/compare 1 interrupt enable

LL_TIM_DIER_CC2IE

Capture/compare 2 interrupt enable

LL_TIM_DIER_CC3IE

Capture/compare 3 interrupt enable

LL_TIM_DIER_CC4IE

Capture/compare 4 interrupt enable

LL_TIM_DIER_COMIE

COM interrupt enable

LL_TIM_DIER_TIE

Trigger interrupt enable

LL_TIM_DIER_BIE

Break interrupt enable

Lock Level

LL_TIM_LOCKLEVEL_OFF

LOCK OFF - No bit is write protected

LL_TIM_LOCKLEVEL_1

LOCK Level 1

LL_TIM_LOCKLEVEL_2

LOCK Level 2

LL_TIM_LOCKLEVEL_3

LOCK Level 3

Output Configuration Idle State

LL_TIM_OCIDLESTATE_LOW

OCx=0 (after a dead-time if OC is implemented) when MOE=0

LL_TIM_OCIDLESTATE_HIGH

OCx=1 (after a dead-time if OC is implemented) when MOE=0

Output Configuration Mode

LL_TIM_OCMODE_FROZEN

The comparison between the output compare register TIMx_CCRy and the counter TIMx_CNT has no effect on the output channel level

LL_TIM_OCMODE_ACTIVE

OCyREF is forced high on compare match

LL_TIM_OCMODE_INACTIVE

OCyREF is forced low on compare match

LL_TIM_OCMODE_TOGGLE

OCyREF toggles on compare match

LL_TIM_OCMODE_FORCED_INACTIVE

OCyREF is forced low

LL_TIM_OCMODE_FORCED_ACTIVE

OCyREF is forced high

LL_TIM_OCMODE_PWM1

In upcounting, channel y is active as long as TIMx_CNT<TIMx_CCRy else inactive. In downcounting, channel y is inactive as long as TIMx_CNT>TIMx_CCRy else active.

LL_TIM_OCMODE_PWM2

In upcounting, channel y is inactive as long as TIMx_CNT<TIMx_CCRy else active. In downcounting, channel y is active as long as TIMx_CNT>TIMx_CCRy else inactive

LL_TIM_OCMODE_RETRIG_OPM1

Retrigerrable OPM mode 1

LL_TIM_OCMODE_RETRIG_OPM2

Retrigerrable OPM mode 2

LL_TIM_OCMODE_COMBINED_PWM1

Combined PWM mode 1

LL_TIM_OCMODE_COMBINED_PWM2

Combined PWM mode 2

LL_TIM_OCMODE_ASSYMETRIC_PWM1

Asymmetric PWM mode 1

LL_TIM_OCMODE_ASSYMETRIC_PWM2

Asymmetric PWM mode 2

Output Configuration Polarity

LL_TIM_OCPOLARITY_HIGH

OCxactive high

LL_TIM_OCPOLARITY_LOW

OCxactive low

Output Configuration State

LL_TIM_OCSTATE_DISABLE

OCx is not active

LL_TIM_OCSTATE_ENABLE

OCx signal is output on the corresponding output pin

One Pulse Mode

LL_TIM_ONEPULSEMODE_SINGLE

Counter stops counting at the next update event

LL_TIM_ONEPULSEMODE_REPETITIVE

Counter is not stopped at update event

OSSI

LL_TIM_OSSI_DISABLE

When inactive, OCx/OCxN outputs are disabled

LL_TIM_OSSI_ENABLE

When inactive, OxC/OCxN outputs are first forced with their inactive level then forced to their idle level after the deadtime

OSSR

LL_TIM_OSSR_DISABLE

When inactive, OCx/OCxN outputs are disabled

LL_TIM_OSSR_ENABLE

When inactive, OC/OCN outputs are enabled with their inactive level as soon as CCxE=1 or CCxNE=1

Slave Mode

LL_TIM_SLAVEMODE_DISABLED

Slave mode disabled

LL_TIM_SLAVEMODE_RESET

Reset Mode - Rising edge of the selected trigger input (TRGI) reinitializes the counter

LL_TIM_SLAVEMODE_GATED

Gated Mode - The counter clock is enabled when the trigger input (TRGI) is high

LL_TIM_SLAVEMODE_TRIGGER

Trigger Mode - The counter starts at a rising edge of the trigger TRGI

LL_TIM_SLAVEMODE_COMBINED_RESETTRIGGER

Combined reset + trigger mode - Rising edge of the selected trigger input (TRGI) reinitializes the counter, generates an update of the registers and starts the counter

TIM12 Timer Input Ch1 Remap

LL_TIM_TIM12_TI1_RMP_GPIO

TIM12 input 1 is connected to GPIO

LL_TIM_TIM12_TI1_RMP_SPDIF_FS

TIM12 input 1 is connected to SPDIF FS

TIM15 Timer Input Ch1 Remap

LL_TIM_TIM15_TI1_RMP_GPIO

TIM15 input 1 is connected to GPIO

LL_TIM_TIM15_TI1_RMP_TIM2_CH1

TIM15 input 1 is connected to TIM2 CH1

LL_TIM_TIM15_TI1_RMP_TIM3_CH1

TIM15 input 1 is connected to TIM3 CH1

LL_TIM_TIM15_TI1_RMP_TIM4_CH1

TIM15 input 1 is connected to TIM4 CH1

LL_TIM_TIM15_TI1_RMP_RCC_LSE

TIM15 input 1 is connected to RCC LSE

LL_TIM_TIM15_TI1_RMP_RCC_CSI

TIM15 input 1 is connected to RCC CSI

LL_TIM_TIM15_TI1_RMP_RCC_MCO2

TIM15 input 1 is connected to RCC MCO2

TIM15 Timer Input Ch2 Remap

LL_TIM_TIM15_TI2_RMP_GPIO

TIM15 input 2 is connected to GPIO

LL_TIM_TIM15_TI2_RMP_TIM2_CH2

TIM15 input 2 is connected to TIM2 CH2

LL_TIM_TIM15_TI2_RMP_TIM3_CH2

TIM15 input 2 is connected to TIM3 CH2

LL_TIM_TIM15_TI2_RMP_TIM4_CH2

TIM15 input 2 is connected to TIM4 CH2

TIM16 Timer Input Ch1 Remap

LL_TIM_TIM16_TI1_RMP_GPIO

TIM16 input 1 is connected to GPIO

LL_TIM_TIM16_TI1_RMP_RCC_LSI

TIM16 input 1 is connected to RCC LSI

LL_TIM_TIM16_TI1_RMP_RCC_LSE

TIM16 input 1 is connected to RCC LSE

LL_TIM_TIM16_TI1_RMP_WKUP_IT

TIM16 input 1 is connected to WKUP_IT

TIM17 Timer Input Ch1 Remap

LL_TIM_TIM17_TI1_RMP_GPIO

TIM17 input 1 is connected to GPIO

LL_TIM_TIM17_TI1_RMP_SPDIF_FS

TIM17 input 1 is connected to SPDIF FS

LL_TIM_TIM17_TI1_RMP_RCC_HSE1MHZ

TIM17 input 1 is connected to RCC HSE 1Mhz

LL_TIM_TIM17_TI1_RMP_RCC_MCO1

TIM17 input 1 is connected to RCC MCO1

TIM1 Timer Input Ch1 Remap

LL_TIM_TIM1_TI1_RMP_GPIO

TIM1 input 1 is connected to GPIO

LL_TIM_TIM1_TI1_RMP_COMP1

TIM1 input 1 is connected to COMP1 OUT

TIM23 Timer Input Ch4 Remap

LL_TIM_TIM23_TI4_RMP_GPIO

TIM23 input 4 is connected to GPIO

LL_TIM_TIM23_TI4_RMP_COMP1

TIM23 input 4 is connected to COMP1 OUT

LL_TIM_TIM23_TI4_RMP_COMP2

TIM23 input 4 is connected to COMP2 OUT

LL_TIM_TIM23_TI4_RMP_COMP1_COMP2

TIM23 input 4 is connected to COMP1 OUT or COMP2 OUT

TIM24 Timer Input Ch1 Remap

LL_TIM_TIM24_TI1_RMP_GPIO

TIM24 input 1 is connected to GPIO

LL_TIM_TIM24_TI1_RMP_CAN_TMP

TIM24 input 1 is connected to CAN TMP

LL_TIM_TIM24_TI1_RMP_CAN_RTP

TIM24 input 1 is connected to CAN RTP

LL_TIM_TIM24_TI1_RMP_CAN_SOC

TIM24 input 1 is connected to CAN SOC

TIM2 Timer Input Ch4 Remap

LL_TIM_TIM2_TI4_RMP_GPIO

TIM2 input 4 is connected to GPIO

LL_TIM_TIM2_TI4_RMP_COMP1

TIM2 input 4 is connected to COMP1 OUT

LL_TIM_TIM2_TI4_RMP_COMP2

TIM2 input 4 is connected to COMP2 OUT

LL_TIM_TIM2_TI4_RMP_COMP1_COMP2

TIM2 input 4 is connected to COMP2 OUT OR COMP2 OUT

TIM3 Timer Input Ch1 Remap

LL_TIM_TIM3_TI1_RMP_GPIO

TIM3 input 1 is connected to GPIO

LL_TIM_TIM3_TI1_RMP_COMP1

TIM3 input 1 is connected to COMP1 OUT

LL_TIM_TIM3_TI1_RMP_COMP2

TIM3 input 1 is connected to COMP2 OUT

LL_TIM_TIM3_TI1_RMP_COMP1_COMP2

TIM3 input 1 is connected to COMP1 OUT or COMP2 OUT

TIM5 Timer Input Ch1 Remap

LL_TIM_TIM5_TI1_RMP_GPIO

TIM5 input 1 is connected to GPIO

LL_TIM_TIM5_TI1_RMP_CAN_TMP

TIM5 input 1 is connected to CAN TMP

LL_TIM_TIM5_TI1_RMP_CAN_RTP

TIM5 input 1 is connected to CAN RTP

TIM8 Timer Input Ch1 Remap

LL_TIM_TIM8_TI1_RMP_GPIO

TIM8 input 1 is connected to GPIO

LL_TIM_TIM8_TI1_RMP_COMP2

TIM8 input 1 is connected to COMP2 OUT

Trigger Output

LL_TIM_TRGO_RESET

UG bit from the TIMx_EGR register is used as trigger output

LL_TIM_TRGO_ENABLE

Counter Enable signal (CNT_EN) is used as trigger output

LL_TIM_TRGO_UPDATE

Update event is used as trigger output

LL_TIM_TRGO_CC1IF

CC1 capture or a compare match is used as trigger output

LL_TIM_TRGO_OC1REF

OC1REF signal is used as trigger output

LL_TIM_TRGO_OC2REF

OC2REF signal is used as trigger output

LL_TIM_TRGO_OC3REF

OC3REF signal is used as trigger output

LL_TIM_TRGO_OC4REF

OC4REF signal is used as trigger output

Trigger Output 2

LL_TIM_TRGO2_RESET

UG bit from the TIMx_EGR register is used as trigger output 2

LL_TIM_TRGO2_ENABLE

Counter Enable signal (CNT_EN) is used as trigger output 2

LL_TIM_TRGO2_UPDATE

Update event is used as trigger output 2

LL_TIM_TRGO2_CC1F

CC1 capture or a compare match is used as trigger output 2

LL_TIM_TRGO2_OC1

OC1REF signal is used as trigger output 2

LL_TIM_TRGO2_OC2

OC2REF signal is used as trigger output 2

LL_TIM_TRGO2_OC3

OC3REF signal is used as trigger output 2

LL_TIM_TRGO2_OC4

OC4REF signal is used as trigger output 2

LL_TIM_TRGO2_OC5

OC5REF signal is used as trigger output 2

LL_TIM_TRGO2_OC6

OC6REF signal is used as trigger output 2

LL_TIM_TRGO2_OC4_RISINGFALLING

OC4REF rising or falling edges are used as trigger output 2

LL_TIM_TRGO2_OC6_RISINGFALLING

OC6REF rising or falling edges are used as trigger output 2

LL_TIM_TRGO2_OC4_RISING_OC6_RISING

OC4REF or OC6REF rising edges are used as trigger output 2

LL_TIM_TRGO2_OC4_RISING_OC6_FALLING

OC4REF rising or OC6REF falling edges are used as trigger output 2

LL_TIM_TRGO2_OC5_RISING_OC6_RISING

OC5REF or OC6REF rising edges are used as trigger output 2

LL_TIM_TRGO2_OC5_RISING_OC6_FALLING

OC5REF rising or OC6REF falling edges are used as trigger output 2

Trigger Selection

LL_TIM_TS_ITR0

Internal Trigger 0 (ITR0) is used as trigger input

LL_TIM_TS_ITR1

Internal Trigger 1 (ITR1) is used as trigger input

LL_TIM_TS_ITR2

Internal Trigger 2 (ITR2) is used as trigger input

LL_TIM_TS_ITR3

Internal Trigger 3 (ITR3) is used as trigger input

LL_TIM_TS_ITR4

Internal Trigger 4 (ITR4) is used as trigger input

LL_TIM_TS_ITR5

Internal Trigger 5 (ITR5) is used as trigger input

LL_TIM_TS_ITR6

Internal Trigger 6 (ITR6) is used as trigger input

LL_TIM_TS_ITR7

Internal Trigger 7 (ITR7) is used as trigger input

LL_TIM_TS_ITR8

Internal Trigger 8 (ITR8) is used as trigger input

LL_TIM_TS_ITR9

Internal Trigger 9 (ITR9) is used as trigger input

LL_TIM_TS_ITR10

Internal Trigger 10 (ITR10) is used as trigger input

LL_TIM_TS_ITR11

Internal Trigger 11 (ITR11) is used as trigger input

LL_TIM_TS_ITR12

Internal Trigger 12 (ITR12) is used as trigger input

LL_TIM_TS_ITR13

Internal Trigger 13 (ITR13) is used as trigger input

LL_TIM_TS_TI1F_ED

TI1 Edge Detector (TI1F_ED) is used as trigger input

LL_TIM_TS_TI1FP1

Filtered Timer Input 1 (TI1FP1) is used as trigger input

LL_TIM_TS_TI2FP2

Filtered Timer Input 2 (TI12P2) is used as trigger input

LL_TIM_TS_ETRF

Filtered external Trigger (ETRF) is used as trigger input

Update Source

LL_TIM_UPDATESOURCE_REGULAR

Counter overflow/underflow, Setting the UG bit or Update generation through the slave mode controller generates an update request

LL_TIM_UPDATESOURCE_COUNTER

Only counter overflow/underflow generates an update request

Common Write and read registers Macros

LL_TIM_WriteReg

Description:

- Write a value in TIM register.

Parameters:

- __INSTANCE__: TIM Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_TIM_ReadReg

Description:

- Read a value in TIM register.

Parameters:

- __INSTANCE__: TIM Instance
- __REG__: Register to be read

Return value:

- Register: value

TIM Exported Constants

LL_TIM_TIM1_ETRSOURCE_GPIO

TIM1_ETR is connected to GPIO

LL_TIM_TIM1_ETRSOURCE_COMP1

TIM1_ETR is connected to COMP1 OUT

LL_TIM_TIM1_ETRSOURCE_COMP2

TIM1_ETR is connected to COMP2 OUT

LL_TIM_TIM1_ETRSOURCE_ADC1_AWD1

TIM1_ETR is connected to ADC1 AWD1

LL_TIM_TIM1_ETRSOURCE_ADC1_AWD2

TIM1_ETR is connected to ADC1 AWD2

LL_TIM_TIM1_ETRSOURCE_ADC1_AWD3

TIM1_ETR is connected to ADC1 AWD3

LL_TIM_TIM1_ETRSOURCE_ADC3_AWD1

TIM1_ETR is connected to ADC3 AWD1

LL_TIM_TIM1_ETRSOURCE_ADC3_AWD2

TIM1_ETR is connected to ADC3 AWD2

LL_TIM_TIM1_ETRSOURCE_ADC3_AWD3

TIM1_ETR is connected to ADC3 AWD3

LL_TIM_TIM8_ETRSOURCE_GPIO

TIM8_ETR is connected to GPIO

LL_TIM_TIM8_ETRSOURCE_COMP1

TIM8_ETR is connected to COMP1 OUT

LL_TIM_TIM8_ETRSOURCE_COMP2

TIM8_ETR is connected to COMP2 OUT

LL_TIM_TIM8_ETRSOURCE_ADC2_AWD1

TIM8_ETR is connected to ADC2 AWD1

LL_TIM_TIM8_ETRSOURCE_ADC2_AWD2

TIM8_ETR is connected to ADC2 AWD2

LL_TIM_TIM8_ETRSOURCE_ADC2_AWD3

TIM8_ETR is connected to ADC2 AWD3

LL_TIM_TIM8_ETRSOURCE_ADC3_AWD1

TIM8_ETR is connected to ADC3 AWD1

LL_TIM_TIM8_ETRSOURCE_ADC3_AWD2

TIM8_ETR is connected to ADC3 AWD2

LL_TIM_TIM8_ETRSOURCE_ADC3_AWD3

TIM8_ETR is connected to ADC3 AWD3

LL_TIM_TIM2_ETRSOURCE_GPIO

TIM2_ETR is connected to GPIO

LL_TIM_TIM2_ETRSOURCE_COMP1

TIM2_ETR is connected to COMP1 OUT

LL_TIM_TIM2_ETRSOURCE_COMP2

TIM2_ETR is connected to COMP2 OUT

LL_TIM_TIM2_ETRSOURCE_RCC_LSE

TIM2_ETR is connected to RCC LSE

LL_TIM_TIM2_ETRSOURCE_SAI1_FSA

TIM2_ETR is connected to SAI1 FS_A

LL_TIM_TIM2_ETRSOURCE_SAI1_FSB

TIM2_ETR is connected to SAI1 FS_B

LL_TIM_TIM3_ETRSOURCE_GPIO

TIM3_ETR is connected to GPIO

LL_TIM_TIM3_ETRSOURCE_COMP1

TIM3_ETR is connected to COMP1 OUT

LL_TIM_TIM5_ETRSOURCE_GPIO

TIM5_ETR is connected to GPIO

LL_TIM_TIM5_ETRSOURCE_SAI2_FSA

TIM5_ETR is connected to SAI2 FS_A

LL_TIM_TIM5_ETRSOURCE_SAI2_FSB

TIM5_ETR is connected to SAI2 FS_B

LL_TIM_TIM5_ETRSOURCE_SAI4_FSA

TIM5_ETR is connected to SAI4 FS_A

LL_TIM_TIM5_ETRSOURCE_SAI4_FSB

TIM5_ETR is connected to SAI4 FS_B

LL_TIM_TIM23_ETRSOURCE_GPIO

TIM23_ETR is connected to GPIO

LL_TIM_TIM23_ETRSOURCE_COMP1

TIM23_ETR is connected to COMP1 OUT

LL_TIM_TIM23_ETRSOURCE_COMP2

TIM23_ETR is connected to COMP2 OUT

LL_TIM_TIM24_ETRSOURCE_GPIO

TIM24_ETR is connected to GPIO

LL_TIM_TIM24_ETRSOURCE_SAI4_FSA

TIM24_ETR is connected to SAI4 FS_A

LL_TIM_TIM24_ETRSOURCE_SAI4_FSB

TIM24_ETR is connected to SAI4 FS_B

LL_TIM_TIM24_ETRSOURCE_SAI1_FSA

TIM24_ETR is connected to SAI1 FS_A

LL_TIM_TIM24_ETRSOURCE_SAI1_FSB

TIM24_ETR is connected to SAI1 FS_B

TIM Exported Macros

__LL_TIM_GETFLAG_UIFCPY

Description:

- HELPER macro retrieving the UIFCPY flag from the counter value.

Parameters:

- __CNT__: Counter value

Return value:

- UIF: status bit

Notes:

- ex: __LL_TIM_GETFLAG_UIFCPY (LL_TIM_GetCounter ()); Relevant only if UIF flag remapping has been enabled (UIF status bit is copied to TIMx_CNT register bit 31)

__LL_TIM_CALC_DEADTIME

Description:

- HELPER macro calculating DTG[0:7] in the TIMx_BDTR register to achieve the requested dead time duration.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __CKD__: This parameter can be one of the following values:
  - LL_TIM_CLOCKDIVISION_DIV1
  - LL_TIM_CLOCKDIVISION_DIV2
  - LL_TIM_CLOCKDIVISION_DIV4
- __DT__: deadtime duration (in ns)

Return value:

- DTG[0:7]

Notes:

- ex: __LL_TIM_CALC_DEADTIME (80000000, LL_TIM_GetClockDivision (), 120);

__LL_TIM_CALC_PSC

Description:

- HELPER macro calculating the prescaler value to achieve the required counter clock frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __CNTCLK__: counter clock frequency (in Hz)

Return value:

- Prescaler: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_PSC (80000000, 1000000);

__LL_TIM_CALC_ARR

Description:

- HELPER macro calculating the auto-reload value to achieve the required output signal frequency.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __FREQ__: output signal frequency (in Hz)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_ARR (1000000, LL_TIM_GetPrescaler (), 10000);

__LL_TIM_CALC_DELAY

Description:

- HELPER macro calculating the compare value required to achieve the required timer output compare active/inactive delay.

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)

Return value:

- Compare: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_DELAY (1000000, LL_TIM_GetPrescaler (), 10);

__LL_TIM_CALC_PULSE

Description:

- HELPER macro calculating the auto-reload value to achieve the required pulse duration (when the timer operates in one pulse mode).

Parameters:

- __TIMCLK__: timer input clock frequency (in Hz)
- __PSC__: prescaler
- __DELAY__: timer output compare active/inactive delay (in us)
- __PULSE__: pulse duration (in us)

Return value:

- Auto-reload: value (between Min_Data=0 and Max_Data=65535)

Notes:

- ex: __LL_TIM_CALC_PULSE (1000000, LL_TIM_GetPrescaler (), 10, 20);

__LL_TIM_GET_ICPSC_RATIO

Description:

- HELPER macro retrieving the ratio of the input capture prescaler.

Parameters:

- __ICPSC__: This parameter can be one of the following values:
  - LL_TIM_ICPSC_DIV1
  - LL_TIM_ICPSC_DIV2
  - LL_TIM_ICPSC_DIV4
  - LL_TIM_ICPSC_DIV8

Return value:

- Input: capture prescaler ratio (1, 2, 4 or 8)

Notes:

- ex: __LL_TIM_GET_ICPSC_RATIO (LL_TIM_IC_GetPrescaler ());

127 LL USART Generic Driver

127.1 USART Firmware driver registers structures

127.1.1 LL_USART_InitTypeDef

LL_USART_InitTypeDef is defined in the stm32h7xx_ll_usart.h

Data Fields

- ***uint32_t PrescalerValue***
- ***uint32_t BaudRate***
- ***uint32_t DataWidth***
- ***uint32_t StopBits***
- ***uint32_t Parity***
- ***uint32_t TransferDirection***
- ***uint32_t HardwareFlowControl***
- ***uint32_t OverSampling***

Field Documentation

- ***uint32_t LL_USART_InitTypeDef::PrescalerValue***

  Specifies the Prescaler to compute the communication baud rate. This parameter can be a value of ***USART_LL_EC_PRESCALER***.This feature can be modified afterwards using unitary function **LL_USART_SetPrescaler()**.
- ***uint32_t LL_USART_InitTypeDef::BaudRate***

  This field defines expected Usart communication baud rate.This feature can be modified afterwards using unitary function **LL_USART_SetBaudRate()**.
- ***uint32_t LL_USART_InitTypeDef::DataWidth***

  Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of ***USART_LL_EC_DATAWIDTH***.This feature can be modified afterwards using unitary function **LL_USART_SetDataWidth()**.
- ***uint32_t LL_USART_InitTypeDef::StopBits***

  Specifies the number of stop bits transmitted. This parameter can be a value of ***USART_LL_EC_STOPBITS***.This feature can be modified afterwards using unitary function **LL_USART_SetStopBitsLength()**.
- ***uint32_t LL_USART_InitTypeDef::Parity***

  Specifies the parity mode. This parameter can be a value of ***USART_LL_EC_PARITY***.This feature can be modified afterwards using unitary function **LL_USART_SetParity()**.
- ***uint32_t LL_USART_InitTypeDef::TransferDirection***

  Specifies whether the Receive and/or Transmit mode is enabled or disabled. This parameter can be a value of ***USART_LL_EC_DIRECTION***.This feature can be modified afterwards using unitary function **LL_USART_SetTransferDirection()**.
- ***uint32_t LL_USART_InitTypeDef::HardwareFlowControl***

  Specifies whether the hardware flow control mode is enabled or disabled. This parameter can be a value of ***USART_LL_EC_HWCONTROL***.This feature can be modified afterwards using unitary function **LL_USART_SetHWFlowCtrl()**.
- ***uint32_t LL_USART_InitTypeDef::OverSampling***

  Specifies whether USART oversampling mode is 16 or 8. This parameter can be a value of ***USART_LL_EC_OVERSAMPLING***.This feature can be modified afterwards using unitary function **LL_USART_SetOverSampling()**.

127.1.2 LL_USART_ClockInitTypeDef

LL_USART_ClockInitTypeDef is defined in the stm32h7xx_ll_usart.h

Data Fields

- ***uint32_t ClockOutput***
- ***uint32_t ClockPolarity***
- ***uint32_t ClockPhase***
- ***uint32_t LastBitClockPulse***

Field Documentation

- ***uint32_t LL_USART_ClockInitTypeDef::ClockOutput***

  Specifies whether the USART clock is enabled or disabled. This parameter can be a value of ***USART_LL_EC_CLOCK***.USART HW configuration can be modified afterwards using unitary functions **LL_USART_EnableSCLKOutput()** or **LL_USART_DisableSCLKOutput()**. For more details, refer to description of this function.
- ***uint32_t LL_USART_ClockInitTypeDef::ClockPolarity***

  Specifies the steady state of the serial clock. This parameter can be a value of ***USART_LL_EC_POLARITY***.USART HW configuration can be modified afterwards using unitary functions **LL_USART_SetClockPolarity()**. For more details, refer to description of this function.
- ***uint32_t LL_USART_ClockInitTypeDef::ClockPhase***

  Specifies the clock transition on which the bit capture is made. This parameter can be a value of ***USART_LL_EC_PHASE***.USART HW configuration can be modified afterwards using unitary functions **LL_USART_SetClockPhase()**. For more details, refer to description of this function.
- ***uint32_t LL_USART_ClockInitTypeDef::LastBitClockPulse***

  Specifies whether the clock pulse corresponding to the last transmitted data bit (MSB) has to be output on the SCLK pin in synchronous mode. This parameter can be a value of ***USART_LL_EC_LASTCLKPULSE***.USART HW configuration can be modified afterwards using unitary functions **LL_USART_SetLastClkPulseOutput()**. For more details, refer to description of this function.

127.2 USART Firmware driver API description

The following section lists the various functions of the USART library.

127.2.1 Detailed description of functions

LL_USART_Enable

Function name

__STATIC_INLINE void LL_USART_Enable (USART_TypeDef * USARTx)

Function description

USART Enable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 UE LL_USART_Enable

LL_USART_Disable

Function name

__STATIC_INLINE void LL_USART_Disable (USART_TypeDef * USARTx)

Function description

USART Disable (all USART prescalers and outputs are disabled)

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When USART is disabled, USART prescalers and outputs are stopped immediately, and current operations are discarded. The configuration of the USART is kept, but all the status flags, in the USARTx_ISR are set to their default values.

Reference Manual to LL API cross reference:

- CR1 UE LL_USART_Disable

LL_USART_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabled (const USART_TypeDef * USARTx)

Function description

Indicate if USART is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 UE LL_USART_IsEnabled

LL_USART_EnableFIFO

Function name

__STATIC_INLINE void LL_USART_EnableFIFO (USART_TypeDef * USARTx)

Function description

FIFO Mode Enable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_USART_EnableFIFO

LL_USART_DisableFIFO

Function name

__STATIC_INLINE void LL_USART_DisableFIFO (USART_TypeDef * USARTx)

Function description

FIFO Mode Disable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_USART_DisableFIFO

LL_USART_IsEnabledFIFO

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledFIFO (const USART_TypeDef * USARTx)

Function description

Indicate if FIFO Mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 FIFOEN LL_USART_IsEnabledFIFO

LL_USART_SetTXFIFOThreshold

Function name

__STATIC_INLINE void LL_USART_SetTXFIFOThreshold (USART_TypeDef * USARTx, uint32_t Threshold)

Function description

Configure TX FIFO Threshold.

Parameters

- **USARTx:** USART Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_USART_SetTXFIFOThreshold

LL_USART_GetTXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_USART_GetTXFIFOThreshold (const USART_TypeDef * USARTx)

Function description

Return TX FIFO Threshold Configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_USART_GetTXFIFOThreshold

LL_USART_SetRXFIFOThreshold

Function name

__STATIC_INLINE void LL_USART_SetRXFIFOThreshold (USART_TypeDef * USARTx, uint32_t Threshold)

Function description

Configure RX FIFO Threshold.

Parameters

- **USARTx:** USART Instance
- **Threshold:** This parameter can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_USART_SetRXFIFOThreshold

LL_USART_GetRXFIFOThreshold

Function name

__STATIC_INLINE uint32_t LL_USART_GetRXFIFOThreshold (const USART_TypeDef * USARTx)

Function description

Return RX FIFO Threshold Configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTCFG LL_USART_GetRXFIFOThreshold

LL_USART_ConfigFIFOsThreshold

Function name

__STATIC_INLINE void LL_USART_ConfigFIFOsThreshold (USART_TypeDef * USARTx, uint32_t TXThreshold, uint32_t RXThreshold)

Function description

Configure TX and RX FIFOs Threshold.

Parameters

- **USARTx:** USART Instance
- **TXThreshold:** This parameter can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8
- **RXThreshold:** This parameter can be one of the following values:
  - LL_USART_FIFOTHRESHOLD_1_8
  - LL_USART_FIFOTHRESHOLD_1_4
  - LL_USART_FIFOTHRESHOLD_1_2
  - LL_USART_FIFOTHRESHOLD_3_4
  - LL_USART_FIFOTHRESHOLD_7_8
  - LL_USART_FIFOTHRESHOLD_8_8

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTCFG LL_USART_ConfigFIFOsThreshold
- CR3 RXFTCFG LL_USART_ConfigFIFOsThreshold

LL_USART_EnableInStopMode

Function name

__STATIC_INLINE void LL_USART_EnableInStopMode (USART_TypeDef * USARTx)

Function description

USART enabled in STOP Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When this function is enabled, USART is able to wake up the MCU from Stop mode, provided that USART clock selection is HSI or LSE in RCC.
- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 UESM LL_USART_EnableInStopMode

LL_USART_DisableInStopMode

Function name

__STATIC_INLINE void LL_USART_DisableInStopMode (USART_TypeDef * USARTx)

Function description

USART disabled in STOP Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When this function is disabled, USART is not able to wake up the MCU from Stop mode
- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 UESM LL_USART_DisableInStopMode

LL_USART_IsEnabledInStopMode

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledInStopMode (const USART_TypeDef * USARTx)

Function description

Indicate if USART is enabled in STOP Mode (able to wake up MCU from Stop mode or not)

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 UESM LL_USART_IsEnabledInStopMode

LL_USART_EnableDirectionRx

Function name

__STATIC_INLINE void LL_USART_EnableDirectionRx (USART_TypeDef * USARTx)

Function description

Receiver Enable (Receiver is enabled and begins searching for a start bit)

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_EnableDirectionRx

LL_USART_DisableDirectionRx

Function name

__STATIC_INLINE void LL_USART_DisableDirectionRx (USART_TypeDef * USARTx)

Function description

Receiver Disable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_DisableDirectionRx

LL_USART_EnableDirectionTx

Function name

__STATIC_INLINE void LL_USART_EnableDirectionTx (USART_TypeDef * USARTx)

Function description

Transmitter Enable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_USART_EnableDirectionTx

LL_USART_DisableDirectionTx

Function name

__STATIC_INLINE void LL_USART_DisableDirectionTx (USART_TypeDef * USARTx)

Function description

Transmitter Disable.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TE LL_USART_DisableDirectionTx

LL_USART_SetTransferDirection

Function name

__STATIC_INLINE void LL_USART_SetTransferDirection (USART_TypeDef * USARTx, uint32_t TransferDirection)

Function description

Configure simultaneously enabled/disabled states of Transmitter and Receiver.

Parameters

- **USARTx:** USART Instance
- **TransferDirection:** This parameter can be one of the following values:
  - LL_USART_DIRECTION_NONE
  - LL_USART_DIRECTION_RX
  - LL_USART_DIRECTION_TX
  - LL_USART_DIRECTION_TX_RX

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_SetTransferDirection
- CR1 TE LL_USART_SetTransferDirection

LL_USART_GetTransferDirection

Function name

__STATIC_INLINE uint32_t LL_USART_GetTransferDirection (const USART_TypeDef * USARTx)

Function description

Return enabled/disabled states of Transmitter and Receiver.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_DIRECTION_NONE
  - LL_USART_DIRECTION_RX
  - LL_USART_DIRECTION_TX
  - LL_USART_DIRECTION_TX_RX

Reference Manual to LL API cross reference:

- CR1 RE LL_USART_GetTransferDirection
- CR1 TE LL_USART_GetTransferDirection

LL_USART_SetParity

Function name

__STATIC_INLINE void LL_USART_SetParity (USART_TypeDef * USARTx, uint32_t Parity)

Function description

Configure Parity (enabled/disabled and parity mode if enabled).

Parameters

- **USARTx:** USART Instance
- **Parity:** This parameter can be one of the following values:
  - LL_USART_PARITY_NONE
  - LL_USART_PARITY_EVEN
  - LL_USART_PARITY_ODD

Return values

- **None:**

Notes

- This function selects if hardware parity control (generation and detection) is enabled or disabled. When the parity control is enabled (Odd or Even), computed parity bit is inserted at the MSB position (9th or 8th bit depending on data width) and parity is checked on the received data.

Reference Manual to LL API cross reference:

- CR1 PS LL_USART_SetParity
- CR1 PCE LL_USART_SetParity

LL_USART_GetParity

Function name

__STATIC_INLINE uint32_t LL_USART_GetParity (const USART_TypeDef * USARTx)

Function description

Return Parity configuration (enabled/disabled and parity mode if enabled)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_PARITY_NONE
  - LL_USART_PARITY_EVEN
  - LL_USART_PARITY_ODD

Reference Manual to LL API cross reference:

- CR1 PS LL_USART_GetParity
- CR1 PCE LL_USART_GetParity

LL_USART_SetWakeUpMethod

Function name

__STATIC_INLINE void LL_USART_SetWakeUpMethod (USART_TypeDef * USARTx, uint32_t Method)

Function description

Set Receiver Wake Up method from Mute mode.

Parameters

- **USARTx:** USART Instance
- **Method:** This parameter can be one of the following values:
  - LL_USART_WAKEUP_IDLELINE
  - LL_USART_WAKEUP_ADDRESSMARK

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 WAKE LL_USART_SetWakeUpMethod

LL_USART_GetWakeUpMethod

Function name

__STATIC_INLINE uint32_t LL_USART_GetWakeUpMethod (const USART_TypeDef * USARTx)

Function description

Return Receiver Wake Up method from Mute mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_WAKEUP_IDLELINE
  - LL_USART_WAKEUP_ADDRESSMARK

Reference Manual to LL API cross reference:

- CR1 WAKE LL_USART_GetWakeUpMethod

LL_USART_SetDataWidth

Function name

__STATIC_INLINE void LL_USART_SetDataWidth (USART_TypeDef * USARTx, uint32_t DataWidth)

Function description

Set Word length (i.e.

Parameters

- **USARTx:** USART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_USART_DATAWIDTH_7B
  - LL_USART_DATAWIDTH_8B
  - LL_USART_DATAWIDTH_9B

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 M0 LL_USART_SetDataWidth
- CR1 M1 LL_USART_SetDataWidth

LL_USART_GetDataWidth

Function name

__STATIC_INLINE uint32_t LL_USART_GetDataWidth (const USART_TypeDef * USARTx)

Function description

Return Word length (i.e.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_DATAWIDTH_7B
  - LL_USART_DATAWIDTH_8B
  - LL_USART_DATAWIDTH_9B

Reference Manual to LL API cross reference:

- CR1 M0 LL_USART_GetDataWidth
- CR1 M1 LL_USART_GetDataWidth

LL_USART_EnableMuteMode

Function name

__STATIC_INLINE void LL_USART_EnableMuteMode (USART_TypeDef * USARTx)

Function description

Allow switch between Mute Mode and Active mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_USART_EnableMuteMode

LL_USART_DisableMuteMode

Function name

__STATIC_INLINE void LL_USART_DisableMuteMode (USART_TypeDef * USARTx)

Function description

Prevent Mute Mode use.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 MME LL_USART_DisableMuteMode

LL_USART_IsEnabledMuteMode

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledMuteMode (const USART_TypeDef * USARTx)

Function description

Indicate if switch between Mute Mode and Active mode is allowed.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 MME LL_USART_IsEnabledMuteMode

LL_USART_SetOverSampling

Function name

__STATIC_INLINE void LL_USART_SetOverSampling (USART_TypeDef * USARTx, uint32_t OverSampling)

Function description

Set Oversampling to 8-bit or 16-bit mode.

Parameters

- **USARTx:** USART Instance
- **OverSampling:** This parameter can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 OVER8 LL_USART_SetOverSampling

LL_USART_GetOverSampling

Function name

__STATIC_INLINE uint32_t LL_USART_GetOverSampling (const USART_TypeDef * USARTx)

Function description

Return Oversampling mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8

Reference Manual to LL API cross reference:

- CR1 OVER8 LL_USART_GetOverSampling

LL_USART_SetLastClkPulseOutput

Function name

__STATIC_INLINE void LL_USART_SetLastClkPulseOutput (USART_TypeDef * USARTx, uint32_t LastBitClockPulse)

Function description

Configure if Clock pulse of the last data bit is output to the SCLK pin or not.

Parameters

- **USARTx:** USART Instance
- **LastBitClockPulse:** This parameter can be one of the following values:
  - LL_USART_LASTCLKPULSE_NO_OUTPUT
  - LL_USART_LASTCLKPULSE_OUTPUT

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBCL LL_USART_SetLastClkPulseOutput

LL_USART_GetLastClkPulseOutput

Function name

__STATIC_INLINE uint32_t LL_USART_GetLastClkPulseOutput (const USART_TypeDef * USARTx)

Function description

Retrieve Clock pulse of the last data bit output configuration (Last bit Clock pulse output to the SCLK pin or not)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_LASTCLKPULSE_NO_OUTPUT
  - LL_USART_LASTCLKPULSE_OUTPUT

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBCL LL_USART_GetLastClkPulseOutput

LL_USART_SetClockPhase

Function name

__STATIC_INLINE void LL_USART_SetClockPhase (USART_TypeDef * USARTx, uint32_t ClockPhase)

Function description

Select the phase of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance
- **ClockPhase:** This parameter can be one of the following values:
  - LL_USART_PHASE_1EDGE
  - LL_USART_PHASE_2EDGE

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPHA LL_USART_SetClockPhase

LL_USART_GetClockPhase

Function name

__STATIC_INLINE uint32_t LL_USART_GetClockPhase (const USART_TypeDef * USARTx)

Function description

Return phase of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_PHASE_1EDGE
  - LL_USART_PHASE_2EDGE

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPHA LL_USART_GetClockPhase

LL_USART_SetClockPolarity

Function name

__STATIC_INLINE void LL_USART_SetClockPolarity (USART_TypeDef * USARTx, uint32_t ClockPolarity)

Function description

Select the polarity of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance
- **ClockPolarity:** This parameter can be one of the following values:
  - LL_USART_POLARITY_LOW
  - LL_USART_POLARITY_HIGH

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPOL LL_USART_SetClockPolarity

LL_USART_GetClockPolarity

Function name

__STATIC_INLINE uint32_t LL_USART_GetClockPolarity (const USART_TypeDef * USARTx)

Function description

Return polarity of the clock output on the SCLK pin in synchronous mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_POLARITY_LOW
  - LL_USART_POLARITY_HIGH

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CPOL LL_USART_GetClockPolarity

LL_USART_ConfigClock

Function name

__STATIC_INLINE void LL_USART_ConfigClock (USART_TypeDef * USARTx, uint32_t Phase, uint32_t Polarity, uint32_t LBCPOutput)

Function description

Configure Clock signal format (Phase Polarity and choice about output of last bit clock pulse)

Parameters

- **USARTx:** USART Instance
- **Phase:** This parameter can be one of the following values:
  - LL_USART_PHASE_1EDGE
  - LL_USART_PHASE_2EDGE
- **Polarity:** This parameter can be one of the following values:
  - LL_USART_POLARITY_LOW
  - LL_USART_POLARITY_HIGH
- **LBCPOutput:** This parameter can be one of the following values:
  - LL_USART_LASTCLKPULSE_NO_OUTPUT
  - LL_USART_LASTCLKPULSE_OUTPUT

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clock Phase configuration using LL_USART_SetClockPhase() functionClock Polarity configuration using LL_USART_SetClockPolarity() functionOutput of Last bit Clock pulse configuration using LL_USART_SetLastClkPulseOutput() function

Reference Manual to LL API cross reference:

- CR2 CPOL LL_USART_ConfigClock
- CR2 LBCL LL_USART_ConfigClock

LL_USART_SetPrescaler

Function name

__STATIC_INLINE void LL_USART_SetPrescaler (USART_TypeDef * USARTx, uint32_t PrescalerValue)

Function description

Configure Clock source prescaler for baudrate generator and oversampling.

Parameters

- **USARTx:** USART Instance
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_USART_SetPrescaler

LL_USART_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_USART_GetPrescaler (const USART_TypeDef * USARTx)

Function description

Retrieve the Clock source prescaler for baudrate generator and oversampling.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- PRESC PRESCALER LL_USART_GetPrescaler

LL_USART_EnableSCLKOutput

Function name

__STATIC_INLINE void LL_USART_EnableSCLKOutput (USART_TypeDef * USARTx)

Function description

Enable Clock output on SCLK pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_EnableSCLKOutput

LL_USART_DisableSCLKOutput

Function name

__STATIC_INLINE void LL_USART_DisableSCLKOutput (USART_TypeDef * USARTx)

Function description

Disable Clock output on SCLK pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_DisableSCLKOutput

LL_USART_IsEnabledSCLKOutput

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSCLKOutput (const USART_TypeDef * USARTx)

Function description

Indicate if Clock output on SCLK pin is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_IsEnabledSCLKOutput

LL_USART_SetStopBitsLength

Function name

__STATIC_INLINE void LL_USART_SetStopBitsLength (USART_TypeDef * USARTx, uint32_t StopBits)

Function description

Set the length of the stop bits.

Parameters

- **USARTx:** USART Instance
- **StopBits:** This parameter can be one of the following values:
  - LL_USART_STOPBITS_0_5
  - LL_USART_STOPBITS_1
  - LL_USART_STOPBITS_1_5
  - LL_USART_STOPBITS_2

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 STOP LL_USART_SetStopBitsLength

LL_USART_GetStopBitsLength

Function name

__STATIC_INLINE uint32_t LL_USART_GetStopBitsLength (const USART_TypeDef * USARTx)

Function description

Retrieve the length of the stop bits.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_STOPBITS_0_5
  - LL_USART_STOPBITS_1
  - LL_USART_STOPBITS_1_5
  - LL_USART_STOPBITS_2

Reference Manual to LL API cross reference:

- CR2 STOP LL_USART_GetStopBitsLength

LL_USART_ConfigCharacter

Function name

__STATIC_INLINE void LL_USART_ConfigCharacter (USART_TypeDef * USARTx, uint32_t DataWidth, uint32_t Parity, uint32_t StopBits)

Function description

Configure Character frame format (Datawidth, Parity control, Stop Bits)

Parameters

- **USARTx:** USART Instance
- **DataWidth:** This parameter can be one of the following values:
  - LL_USART_DATAWIDTH_7B
  - LL_USART_DATAWIDTH_8B
  - LL_USART_DATAWIDTH_9B
- **Parity:** This parameter can be one of the following values:
  - LL_USART_PARITY_NONE
  - LL_USART_PARITY_EVEN
  - LL_USART_PARITY_ODD
- **StopBits:** This parameter can be one of the following values:
  - LL_USART_STOPBITS_0_5
  - LL_USART_STOPBITS_1
  - LL_USART_STOPBITS_1_5
  - LL_USART_STOPBITS_2

Return values

- **None:**

Notes

- Call of this function is equivalent to following function call sequence : Data Width configuration using LL_USART_SetDataWidth() functionParity Control and mode configuration using LL_USART_SetParity() functionStop bits configuration using LL_USART_SetStopBitsLength() function

Reference Manual to LL API cross reference:

- CR2 STOP LL_USART_ConfigCharacter

LL_USART_SetTXRXSwap

Function name

__STATIC_INLINE void LL_USART_SetTXRXSwap (USART_TypeDef * USARTx, uint32_t SwapConfig)

Function description

Configure TX/RX pins swapping setting.

Parameters

- **USARTx:** USART Instance
- **SwapConfig:** This parameter can be one of the following values:
  - LL_USART_TXRX_STANDARD
  - LL_USART_TXRX_SWAPPED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 SWAP LL_USART_SetTXRXSwap

LL_USART_GetTXRXSwap

Function name

__STATIC_INLINE uint32_t LL_USART_GetTXRXSwap (const USART_TypeDef * USARTx)

Function description

Retrieve TX/RX pins swapping configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_TXRX_STANDARD
  - LL_USART_TXRX_SWAPPED

Reference Manual to LL API cross reference:

- CR2 SWAP LL_USART_GetTXRXSwap

LL_USART_SetRXPinLevel

Function name

__STATIC_INLINE void LL_USART_SetRXPinLevel (USART_TypeDef * USARTx, uint32_t PinInvMethod)

Function description

Configure RX pin active level logic.

Parameters

- **USARTx:** USART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_USART_RXPIN_LEVEL_STANDARD
  - LL_USART_RXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RXINV LL_USART_SetRXPinLevel

LL_USART_GetRXPinLevel

Function name

__STATIC_INLINE uint32_t LL_USART_GetRXPinLevel (const USART_TypeDef * USARTx)

Function description

Retrieve RX pin active level logic configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_RXPIN_LEVEL_STANDARD
  - LL_USART_RXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 RXINV LL_USART_GetRXPinLevel

LL_USART_SetTXPinLevel

Function name

__STATIC_INLINE void LL_USART_SetTXPinLevel (USART_TypeDef * USARTx, uint32_t PinInvMethod)

Function description

Configure TX pin active level logic.

Parameters

- **USARTx:** USART Instance
- **PinInvMethod:** This parameter can be one of the following values:
  - LL_USART_TXPIN_LEVEL_STANDARD
  - LL_USART_TXPIN_LEVEL_INVERTED

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 TXINV LL_USART_SetTXPinLevel

LL_USART_GetTXPinLevel

Function name

__STATIC_INLINE uint32_t LL_USART_GetTXPinLevel (const USART_TypeDef * USARTx)

Function description

Retrieve TX pin active level logic configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_TXPIN_LEVEL_STANDARD
  - LL_USART_TXPIN_LEVEL_INVERTED

Reference Manual to LL API cross reference:

- CR2 TXINV LL_USART_GetTXPinLevel

LL_USART_SetBinaryDataLogic

Function name

__STATIC_INLINE void LL_USART_SetBinaryDataLogic (USART_TypeDef * USARTx, uint32_t DataLogic)

Function description

Configure Binary data logic.

Parameters

- **USARTx:** USART Instance
- **DataLogic:** This parameter can be one of the following values:
  - LL_USART_BINARY_LOGIC_POSITIVE
  - LL_USART_BINARY_LOGIC_NEGATIVE

Return values

- **None:**

Notes

- Allow to define how Logical data from the data register are send/received : either in positive/direct logic (1=H, 0=L) or in negative/inverse logic (1=L, 0=H)

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_USART_SetBinaryDataLogic

LL_USART_GetBinaryDataLogic

Function name

__STATIC_INLINE uint32_t LL_USART_GetBinaryDataLogic (const USART_TypeDef * USARTx)

Function description

Retrieve Binary data configuration.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_BINARY_LOGIC_POSITIVE
  - LL_USART_BINARY_LOGIC_NEGATIVE

Reference Manual to LL API cross reference:

- CR2 DATAINV LL_USART_GetBinaryDataLogic

LL_USART_SetTransferBitOrder

Function name

__STATIC_INLINE void LL_USART_SetTransferBitOrder (USART_TypeDef * USARTx, uint32_t BitOrder)

Function description

Configure transfer bit order (either Less or Most Significant Bit First)

Parameters

- **USARTx:** USART Instance
- **BitOrder:** This parameter can be one of the following values:
  - LL_USART_BITORDER_LSBFIRST
  - LL_USART_BITORDER_MSBFIRST

Return values

- **None:**

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_USART_SetTransferBitOrder

LL_USART_GetTransferBitOrder

Function name

__STATIC_INLINE uint32_t LL_USART_GetTransferBitOrder (const USART_TypeDef * USARTx)

Function description

Return transfer bit order (either Less or Most Significant Bit First)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_BITORDER_LSBFIRST
  - LL_USART_BITORDER_MSBFIRST

Notes

- MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.

Reference Manual to LL API cross reference:

- CR2 MSBFIRST LL_USART_GetTransferBitOrder

LL_USART_EnableAutoBaudRate

Function name

__STATIC_INLINE void LL_USART_EnableAutoBaudRate (USART_TypeDef * USARTx)

Function description

Enable Auto Baud-Rate Detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABREN LL_USART_EnableAutoBaudRate

LL_USART_DisableAutoBaudRate

Function name

__STATIC_INLINE void LL_USART_DisableAutoBaudRate (USART_TypeDef * USARTx)

Function description

Disable Auto Baud-Rate Detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABREN LL_USART_DisableAutoBaudRate

LL_USART_IsEnabledAutoBaud

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledAutoBaud (const USART_TypeDef * USARTx)

Function description

Indicate if Auto Baud-Rate Detection mechanism is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABREN LL_USART_IsEnabledAutoBaud

LL_USART_SetAutoBaudRateMode

Function name

__STATIC_INLINE void LL_USART_SetAutoBaudRateMode (USART_TypeDef * USARTx, uint32_t AutoBaudRateMode)

Function description

Set Auto Baud-Rate mode bits.

Parameters

- **USARTx:** USART Instance
- **AutoBaudRateMode:** This parameter can be one of the following values:
  - LL_USART_AUTOBAUD_DETECT_ON_STARTBIT
  - LL_USART_AUTOBAUD_DETECT_ON_FALLINGEDGE
  - LL_USART_AUTOBAUD_DETECT_ON_7F_FRAME
  - LL_USART_AUTOBAUD_DETECT_ON_55_FRAME

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABRMODE LL_USART_SetAutoBaudRateMode

LL_USART_GetAutoBaudRateMode

Function name

__STATIC_INLINE uint32_t LL_USART_GetAutoBaudRateMode (USART_TypeDef * USARTx)

Function description

Return Auto Baud-Rate mode.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_AUTOBAUD_DETECT_ON_STARTBIT
  - LL_USART_AUTOBAUD_DETECT_ON_FALLINGEDGE
  - LL_USART_AUTOBAUD_DETECT_ON_7F_FRAME
  - LL_USART_AUTOBAUD_DETECT_ON_55_FRAME

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 ABRMODE LL_USART_GetAutoBaudRateMode

LL_USART_EnableRxTimeout

Function name

__STATIC_INLINE void LL_USART_EnableRxTimeout (USART_TypeDef * USARTx)

Function description

Enable Receiver Timeout.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RTOEN LL_USART_EnableRxTimeout

LL_USART_DisableRxTimeout

Function name

__STATIC_INLINE void LL_USART_DisableRxTimeout (USART_TypeDef * USARTx)

Function description

Disable Receiver Timeout.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR2 RTOEN LL_USART_DisableRxTimeout

LL_USART_IsEnabledRxTimeout

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledRxTimeout (const USART_TypeDef * USARTx)

Function description

Indicate if Receiver Timeout feature is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR2 RTOEN LL_USART_IsEnabledRxTimeout

LL_USART_ConfigNodeAddress

Function name

__STATIC_INLINE void LL_USART_ConfigNodeAddress (USART_TypeDef * USARTx, uint32_t AddressLen, uint32_t NodeAddress)

Function description

Set Address of the USART node.

Parameters

- **USARTx:** USART Instance
- **AddressLen:** This parameter can be one of the following values:
  - LL_USART_ADDRESS_DETECT_4B
  - LL_USART_ADDRESS_DETECT_7B
- **NodeAddress:** 4 or 7 bit Address of the USART node.

Return values

- **None:**

Notes

- This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with address mark detection.
- 4bits address node is used when 4-bit Address Detection is selected in ADDM7. (b7-b4 should be set to 0) 8bits address node is used when 7-bit Address Detection is selected in ADDM7. (This is used in multiprocessor communication during Mute mode or Stop mode, for wake up with 7-bit address mark detection. The MSB of the character sent by the transmitter should be equal to 1. It may also be used for character detection during normal reception, Mute mode inactive (for example, end of block detection in ModBus protocol). In this case, the whole received character (8-bit) is compared to the ADD[7:0] value and CMF flag is set on match)

Reference Manual to LL API cross reference:

- CR2 ADD LL_USART_ConfigNodeAddress
- CR2 ADDM7 LL_USART_ConfigNodeAddress

LL_USART_GetNodeAddress

Function name

__STATIC_INLINE uint32_t LL_USART_GetNodeAddress (const USART_TypeDef * USARTx)

Function description

Return 8 bit Address of the USART node as set in ADD field of CR2.

Parameters

- **USARTx:** USART Instance

Return values

- **Address:** of the USART node (Value between Min_Data=0 and Max_Data=255)

Notes

- If 4-bit Address Detection is selected in ADDM7, only 4bits (b3-b0) of returned value are relevant (b31-b4 are not relevant) If 7-bit Address Detection is selected in ADDM7, only 8bits (b7-b0) of returned value are relevant (b31-b8 are not relevant)

Reference Manual to LL API cross reference:

- CR2 ADD LL_USART_GetNodeAddress

LL_USART_GetNodeAddressLen

Function name

__STATIC_INLINE uint32_t LL_USART_GetNodeAddressLen (const USART_TypeDef * USARTx)

Function description

Return Length of Node Address used in Address Detection mode (7-bit or 4-bit)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_ADDRESS_DETECT_4B
  - LL_USART_ADDRESS_DETECT_7B

Reference Manual to LL API cross reference:

- CR2 ADDM7 LL_USART_GetNodeAddressLen

LL_USART_EnableRTSHWFlowCtrl

Function name

__STATIC_INLINE void LL_USART_EnableRTSHWFlowCtrl (USART_TypeDef * USARTx)

Function description

Enable RTS HW Flow Control.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RTSE LL_USART_EnableRTSHWFlowCtrl

LL_USART_DisableRTSHWFlowCtrl

Function name

LL_USART_EnableOneBitSamp

Function name

__STATIC_INLINE void LL_USART_EnableOneBitSamp (USART_TypeDef * USARTx)

Function description

Enable One bit sampling method.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 ONEBIT LL_USART_EnableOneBitSamp

LL_USART_DisableOneBitSamp

Function name

__STATIC_INLINE void LL_USART_DisableOneBitSamp (USART_TypeDef * USARTx)

Function description

Disable One bit sampling method.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 ONEBIT LL_USART_DisableOneBitSamp

LL_USART_IsEnabledOneBitSamp

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledOneBitSamp (const USART_TypeDef * USARTx)

Function description

Indicate if One bit sampling method is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 ONEBIT LL_USART_IsEnabledOneBitSamp

LL_USART_EnableOverrunDetect

Function name

__STATIC_INLINE void LL_USART_EnableOverrunDetect (USART_TypeDef * USARTx)

Function description

Enable Overrun detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_USART_EnableOverrunDetect

LL_USART_DisableOverrunDetect

Function name

__STATIC_INLINE void LL_USART_DisableOverrunDetect (USART_TypeDef * USARTx)

Function description

Disable Overrun detection.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_USART_DisableOverrunDetect

LL_USART_IsEnabledOverrunDetect

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledOverrunDetect (const USART_TypeDef * USARTx)

Function description

Indicate if Overrun detection is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 OVRDIS LL_USART_IsEnabledOverrunDetect

LL_USART_SetWKUPType

Function name

__STATIC_INLINE void LL_USART_SetWKUPType (USART_TypeDef * USARTx, uint32_t Type)

Function description

Select event type for Wake UP Interrupt Flag (WUS[1:0] bits)

Parameters

- **USARTx:** USART Instance
- **Type:** This parameter can be one of the following values:
  - LL_USART_WAKEUP_ON_ADDRESS
  - LL_USART_WAKEUP_ON_STARTBIT
  - LL_USART_WAKEUP_ON_RXNE

Return values

- **None:**

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 WUS LL_USART_SetWKUPType

LL_USART_GetWKUPType

Function name

__STATIC_INLINE uint32_t LL_USART_GetWKUPType (const USART_TypeDef * USARTx)

Function description

Return event type for Wake UP Interrupt Flag (WUS[1:0] bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_WAKEUP_ON_ADDRESS
  - LL_USART_WAKEUP_ON_STARTBIT
  - LL_USART_WAKEUP_ON_RXNE

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 WUS LL_USART_GetWKUPType

LL_USART_SetBaudRate

Function name

__STATIC_INLINE void LL_USART_SetBaudRate (USART_TypeDef * USARTx, uint32_t PeriphClk, uint32_t PrescalerValue, uint32_t OverSampling, uint32_t BaudRate)

Function description

Configure USART BRR register for achieving expected Baud Rate value.

Parameters

- **USARTx:** USART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- **OverSampling:** This parameter can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8
- **BaudRate:** Baud Rate

Return values

- **None:**

Notes

- Compute and set USARTDIV value in BRR Register (full BRR content) according to used Peripheral Clock, Oversampling mode, and expected Baud Rate values
- Peripheral clock and Baud rate values provided as function parameters should be valid (Baud rate value != 0)
- In case of oversampling by 16 and 8, BRR content must be greater than or equal to 16d.

Reference Manual to LL API cross reference:

- BRR BRR LL_USART_SetBaudRate

LL_USART_GetBaudRate

Function name

__STATIC_INLINE uint32_t LL_USART_GetBaudRate (const USART_TypeDef * USARTx, uint32_t PeriphClk, uint32_t PrescalerValue, uint32_t OverSampling)

Function description

Return current Baud Rate value, according to USARTDIV present in BRR register (full BRR content), and to used Peripheral Clock and Oversampling mode values.

Parameters

- **USARTx:** USART Instance
- **PeriphClk:** Peripheral Clock
- **PrescalerValue:** This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- **OverSampling:** This parameter can be one of the following values:
  - LL_USART_OVERSAMPLING_16
  - LL_USART_OVERSAMPLING_8

Return values

- **Baud:** Rate

Notes

- In case of non-initialized or invalid value stored in BRR register, value 0 will be returned.
- In case of oversampling by 16 and 8, BRR content must be greater than or equal to 16d.

Reference Manual to LL API cross reference:

- BRR BRR LL_USART_GetBaudRate

LL_USART_SetRxTimeout

Function name

__STATIC_INLINE void LL_USART_SetRxTimeout (USART_TypeDef * USARTx, uint32_t Timeout)

Function description

Set Receiver Time Out Value (expressed in nb of bits duration)

Parameters

- **USARTx:** USART Instance
- **Timeout:** Value between Min_Data=0x00 and Max_Data=0x00FFFFFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTOR RTO LL_USART_SetRxTimeout

LL_USART_GetRxTimeout

Function name

__STATIC_INLINE uint32_t LL_USART_GetRxTimeout (const USART_TypeDef * USARTx)

Function description

Get Receiver Time Out Value (expressed in nb of bits duration)

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x00FFFFFF

Reference Manual to LL API cross reference:

- RTOR RTO LL_USART_GetRxTimeout

LL_USART_SetBlockLength

Function name

__STATIC_INLINE void LL_USART_SetBlockLength (USART_TypeDef * USARTx, uint32_t BlockLength)

Function description

Set Block Length value in reception.

Parameters

- **USARTx:** USART Instance
- **BlockLength:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- RTOR BLEN LL_USART_SetBlockLength

LL_USART_GetBlockLength

Function name

__STATIC_INLINE uint32_t LL_USART_GetBlockLength (const USART_TypeDef * USARTx)

Function description

Get Block Length value in reception.

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RTOR BLEN LL_USART_GetBlockLength

LL_USART_EnableIrda

Function name

__STATIC_INLINE void LL_USART_EnableIrda (USART_TypeDef * USARTx)

Function description

Enable IrDA mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IREN LL_USART_EnableIrda

LL_USART_DisableIrda

Function name

__STATIC_INLINE void LL_USART_DisableIrda (USART_TypeDef * USARTx)

Function description

Disable IrDA mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IREN LL_USART_DisableIrda

LL_USART_IsEnabledIrda

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIrda (const USART_TypeDef * USARTx)

Function description

Indicate if IrDA mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IREN LL_USART_IsEnabledIrda

LL_USART_SetIrdaPowerMode

Function name

__STATIC_INLINE void LL_USART_SetIrdaPowerMode (USART_TypeDef * USARTx, uint32_t PowerMode)

Function description

Configure IrDA Power Mode (Normal or Low Power)

Parameters

- **USARTx:** USART Instance
- **PowerMode:** This parameter can be one of the following values:
  - LL_USART_IRDA_POWER_NORMAL
  - LL_USART_IRDA_POWER_LOW

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IRLP LL_USART_SetIrdaPowerMode

LL_USART_GetIrdaPowerMode

Function name

__STATIC_INLINE uint32_t LL_USART_GetIrdaPowerMode (const USART_TypeDef * USARTx)

Function description

Retrieve IrDA Power Mode configuration (Normal or Low Power)

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_IRDA_POWER_NORMAL
  - LL_USART_PHASE_2EDGE

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 IRLP LL_USART_GetIrdaPowerMode

LL_USART_SetIrdaPrescaler

Function name

__STATIC_INLINE void LL_USART_SetIrdaPrescaler (USART_TypeDef * USARTx, uint32_t PrescalerValue)

Function description

Set Irda prescaler value, used for dividing the USART clock source to achieve the Irda Low Power frequency (8 bits value)

Parameters

- **USARTx:** USART Instance
- **PrescalerValue:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_SetIrdaPrescaler

LL_USART_GetIrdaPrescaler

Function name

__STATIC_INLINE uint32_t LL_USART_GetIrdaPrescaler (const USART_TypeDef * USARTx)

Function description

Return Irda prescaler value, used for dividing the USART clock source to achieve the Irda Low Power frequency (8 bits value)

Parameters

- **USARTx:** USART Instance

Return values

- **Irda:** prescaler value (Value between Min_Data=0x00 and Max_Data=0xFF)

Notes

- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_GetIrdaPrescaler

LL_USART_EnableSmartcardNACK

Function name

__STATIC_INLINE void LL_USART_EnableSmartcardNACK (USART_TypeDef * USARTx)

Function description

Enable Smartcard NACK transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 NACK LL_USART_EnableSmartcardNACK

LL_USART_DisableSmartcardNACK

Function name

__STATIC_INLINE void LL_USART_DisableSmartcardNACK (USART_TypeDef * USARTx)

Function description

Disable Smartcard NACK transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 NACK LL_USART_DisableSmartcardNACK

LL_USART_IsEnabledSmartcardNACK

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSmartcardNACK (const USART_TypeDef * USARTx)

Function description

Indicate if Smartcard NACK transmission is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 NACK LL_USART_IsEnabledSmartcardNACK

LL_USART_EnableSmartcard

Function name

__STATIC_INLINE void LL_USART_EnableSmartcard (USART_TypeDef * USARTx)

Function description

Enable Smartcard mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCEN LL_USART_EnableSmartcard

LL_USART_DisableSmartcard

Function name

__STATIC_INLINE void LL_USART_DisableSmartcard (USART_TypeDef * USARTx)

Function description

Disable Smartcard mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCEN LL_USART_DisableSmartcard

LL_USART_IsEnabledSmartcard

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSmartcard (const USART_TypeDef * USARTx)

Function description

Indicate if Smartcard mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCEN LL_USART_IsEnabledSmartcard

LL_USART_SetSmartcardAutoRetryCount

Function name

__STATIC_INLINE void LL_USART_SetSmartcardAutoRetryCount (USART_TypeDef * USARTx, uint32_t AutoRetryCount)

Function description

Set Smartcard Auto-Retry Count value (SCARCNT[2:0] bits)

Parameters

- **USARTx:** USART Instance
- **AutoRetryCount:** Value between Min_Data=0 and Max_Data=7

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.
- This bit-field specifies the number of retries in transmit and receive, in Smartcard mode. In transmission mode, it specifies the number of automatic retransmission retries, before generating a transmission error (FE bit set). In reception mode, it specifies the number or erroneous reception trials, before generating a reception error (RXNE and PE bits set)

Reference Manual to LL API cross reference:

- CR3 SCARCNT LL_USART_SetSmartcardAutoRetryCount

LL_USART_GetSmartcardAutoRetryCount

Function name

__STATIC_INLINE uint32_t LL_USART_GetSmartcardAutoRetryCount (const USART_TypeDef * USARTx)

Function description

Return Smartcard Auto-Retry Count value (SCARCNT[2:0] bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Smartcard:** Auto-Retry Count value (Value between Min_Data=0 and Max_Data=7)

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 SCARCNT LL_USART_GetSmartcardAutoRetryCount

LL_USART_SetSmartcardPrescaler

Function name

__STATIC_INLINE void LL_USART_SetSmartcardPrescaler (USART_TypeDef * USARTx, uint32_t PrescalerValue)

Function description

Set Smartcard prescaler value, used for dividing the USART clock source to provide the SMARTCARD Clock (5 bits value)

Parameters

- **USARTx:** USART Instance
- **PrescalerValue:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_SetSmartcardPrescaler

LL_USART_GetSmartcardPrescaler

Function name

__STATIC_INLINE uint32_t LL_USART_GetSmartcardPrescaler (const USART_TypeDef * USARTx)

Function description

Return Smartcard prescaler value, used for dividing the USART clock source to provide the SMARTCARD Clock (5 bits value)

Parameters

- **USARTx:** USART Instance

Return values

- **Smartcard:** prescaler value (Value between Min_Data=0 and Max_Data=31)

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR PSC LL_USART_GetSmartcardPrescaler

LL_USART_SetSmartcardGuardTime

Function name

__STATIC_INLINE void LL_USART_SetSmartcardGuardTime (USART_TypeDef * USARTx, uint32_t GuardTime)

Function description

Set Smartcard Guard time value, expressed in nb of baud clocks periods (GT[7:0] bits : Guard time value)

Parameters

- **USARTx:** USART Instance
- **GuardTime:** Value between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR GT LL_USART_SetSmartcardGuardTime

LL_USART_GetSmartcardGuardTime

Function name

__STATIC_INLINE uint32_t LL_USART_GetSmartcardGuardTime (const USART_TypeDef * USARTx)

Function description

Return Smartcard Guard time value, expressed in nb of baud clocks periods (GT[7:0] bits : Guard time value)

Parameters

- **USARTx:** USART Instance

Return values

- **Smartcard:** Guard time value (Value between Min_Data=0x00 and Max_Data=0xFF)

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- GTPR GT LL_USART_GetSmartcardGuardTime

LL_USART_EnableHalfDuplex

Function name

__STATIC_INLINE void LL_USART_EnableHalfDuplex (USART_TypeDef * USARTx)

Function description

Enable Single Wire Half-Duplex mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_USART_EnableHalfDuplex

LL_USART_DisableHalfDuplex

Function name

__STATIC_INLINE void LL_USART_DisableHalfDuplex (USART_TypeDef * USARTx)

Function description

Disable Single Wire Half-Duplex mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_USART_DisableHalfDuplex

LL_USART_IsEnabledHalfDuplex

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledHalfDuplex (const USART_TypeDef * USARTx)

Function description

Indicate if Single Wire Half-Duplex mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 HDSEL LL_USART_IsEnabledHalfDuplex

LL_USART_EnableSPISlave

Function name

__STATIC_INLINE void LL_USART_EnableSPISlave (USART_TypeDef * USARTx)

Function description

Enable SPI Synchronous Slave mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 SLVEN LL_USART_EnableSPISlave

LL_USART_DisableSPISlave

Function name

__STATIC_INLINE void LL_USART_DisableSPISlave (USART_TypeDef * USARTx)

Function description

Disable SPI Synchronous Slave mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 SLVEN LL_USART_DisableSPISlave

LL_USART_IsEnabledSPISlave

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSPISlave (const USART_TypeDef * USARTx)

Function description

Indicate if SPI Synchronous Slave mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 SLVEN LL_USART_IsEnabledSPISlave

LL_USART_EnableSPISlaveSelect

Function name

__STATIC_INLINE void LL_USART_EnableSPISlaveSelect (USART_TypeDef * USARTx)

Function description

Enable SPI Slave Selection using NSS input pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.
- SPI Slave Selection depends on NSS input pin (The slave is selected when NSS is low and deselected when NSS is high).

Reference Manual to LL API cross reference:

- CR2 DIS_NSS LL_USART_EnableSPISlaveSelect

LL_USART_DisableSPISlaveSelect

Function name

__STATIC_INLINE void LL_USART_DisableSPISlaveSelect (USART_TypeDef * USARTx)

Function description

Disable SPI Slave Selection using NSS input pin.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.
- SPI Slave will be always selected and NSS input pin will be ignored.

Reference Manual to LL API cross reference:

- CR2 DIS_NSS LL_USART_DisableSPISlaveSelect

LL_USART_IsEnabledSPISlaveSelect

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledSPISlaveSelect (const USART_TypeDef * USARTx)

Function description

Indicate if SPI Slave Selection depends on NSS input pin.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 DIS_NSS LL_USART_IsEnabledSPISlaveSelect

LL_USART_SetLINBrkDetectionLen

Function name

__STATIC_INLINE void LL_USART_SetLINBrkDetectionLen (USART_TypeDef * USARTx, uint32_t LINBDLength)

Function description

Set LIN Break Detection Length.

Parameters

- **USARTx:** USART Instance
- **LINBDLength:** This parameter can be one of the following values:
  - LL_USART_LINBREAK_DETECT_10B
  - LL_USART_LINBREAK_DETECT_11B

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDL LL_USART_SetLINBrkDetectionLen

LL_USART_GetLINBrkDetectionLen

Function name

__STATIC_INLINE uint32_t LL_USART_GetLINBrkDetectionLen (const USART_TypeDef * USARTx)

Function description

Return LIN Break Detection Length.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_LINBREAK_DETECT_10B
  - LL_USART_LINBREAK_DETECT_11B

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDL LL_USART_GetLINBrkDetectionLen

LL_USART_EnableLIN

Function name

__STATIC_INLINE void LL_USART_EnableLIN (USART_TypeDef * USARTx)

Function description

Enable LIN mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_EnableLIN

LL_USART_DisableLIN

Function name

__STATIC_INLINE void LL_USART_DisableLIN (USART_TypeDef * USARTx)

Function description

Disable LIN mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_DisableLIN

LL_USART_IsEnabledLIN

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledLIN (const USART_TypeDef * USARTx)

Function description

Indicate if LIN mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_IsEnabledLIN

LL_USART_SetDEDeassertionTime

Function name

__STATIC_INLINE void LL_USART_SetDEDeassertionTime (USART_TypeDef * USARTx, uint32_t Time)

Function description

Set DEDT (Driver Enable De-Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **USARTx:** USART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEDT LL_USART_SetDEDeassertionTime

LL_USART_GetDEDeassertionTime

Function name

__STATIC_INLINE uint32_t LL_USART_GetDEDeassertionTime (const USART_TypeDef * USARTx)

Function description

Return DEDT (Driver Enable De-Assertion Time)

Parameters

- **USARTx:** USART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : Value between Min_Data=0 and Max_Data=31

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEDT LL_USART_GetDEDeassertionTime

LL_USART_SetDEAssertionTime

Function name

__STATIC_INLINE void LL_USART_SetDEAssertionTime (USART_TypeDef * USARTx, uint32_t Time)

Function description

Set DEAT (Driver Enable Assertion Time), Time value expressed on 5 bits ([4:0] bits).

Parameters

- **USARTx:** USART Instance
- **Time:** Value between Min_Data=0 and Max_Data=31

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEAT LL_USART_SetDEAssertionTime

Function name

__STATIC_INLINE uint32_t LL_USART_GetDEAssertionTime (const USART_TypeDef * USARTx)

Function description

Return DEAT (Driver Enable Assertion Time)

Parameters

- **USARTx:** USART Instance

Return values

- **Time:** value expressed on 5 bits ([4:0] bits) : Value between Min_Data=0 and Max_Data=31

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 DEAT LL_USART_GetDEAssertionTime

LL_USART_EnableDEMode

Function name

__STATIC_INLINE void LL_USART_EnableDEMode (USART_TypeDef * USARTx)

Function description

Enable Driver Enable (DE) Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEM LL_USART_EnableDEMode

LL_USART_DisableDEMode

Function name

__STATIC_INLINE void LL_USART_DisableDEMode (USART_TypeDef * USARTx)

Function description

Disable Driver Enable (DE) Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEM LL_USART_DisableDEMode

LL_USART_IsEnabledDEMode

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDEMode (const USART_TypeDef * USARTx)

Function description

Indicate if Driver Enable (DE) Mode is enabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEM LL_USART_IsEnabledDEMode

LL_USART_SetDESignalPolarity

Function name

__STATIC_INLINE void LL_USART_SetDESignalPolarity (USART_TypeDef * USARTx, uint32_t Polarity)

Function description

Select Driver Enable Polarity.

Parameters

- **USARTx:** USART Instance
- **Polarity:** This parameter can be one of the following values:
  - LL_USART_DE_POLARITY_HIGH
  - LL_USART_DE_POLARITY_LOW

Return values

- **None:**

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEP LL_USART_SetDESignalPolarity

LL_USART_GetDESignalPolarity

Function name

__STATIC_INLINE uint32_t LL_USART_GetDESignalPolarity (const USART_TypeDef * USARTx)

Function description

Return Driver Enable Polarity.

Parameters

- **USARTx:** USART Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_USART_DE_POLARITY_HIGH
  - LL_USART_DE_POLARITY_LOW

Notes

- Macro IS_UART_DRIVER_ENABLE_INSTANCE(USARTx) can be used to check whether or not Driver Enable feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 DEP LL_USART_GetDESignalPolarity

LL_USART_ConfigAsyncMode

Function name

__STATIC_INLINE void LL_USART_ConfigAsyncMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Asynchronous Mode (UART)

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In UART mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,CLKEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() function
- Other remaining configurations items related to Asynchronous Mode (as Baud Rate, Word length, Parity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigAsyncMode
- CR2 CLKEN LL_USART_ConfigAsyncMode
- CR3 SCEN LL_USART_ConfigAsyncMode
- CR3 IREN LL_USART_ConfigAsyncMode
- CR3 HDSEL LL_USART_ConfigAsyncMode

LL_USART_ConfigSyncMode

Function name

__STATIC_INLINE void LL_USART_ConfigSyncMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Synchronous Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In Synchronous mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also sets the USART in Synchronous mode.
- Macro IS_USART_INSTANCE(USARTx) can be used to check whether or not Synchronous mode is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionSet CLKEN in CR2 using LL_USART_EnableSCLKOutput() function
- Other remaining configurations items related to Synchronous Mode (as Baud Rate, Word length, Parity, Clock Polarity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigSyncMode
- CR2 CLKEN LL_USART_ConfigSyncMode
- CR3 SCEN LL_USART_ConfigSyncMode
- CR3 IREN LL_USART_ConfigSyncMode
- CR3 HDSEL LL_USART_ConfigSyncMode

LL_USART_ConfigLINMode

Function name

__STATIC_INLINE void LL_USART_ConfigLINMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in LIN Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In LIN mode, the following bits must be kept cleared: STOP and CLKEN bits in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also set the UART/USART in LIN mode.
- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear STOP in CR2 using LL_USART_SetStopBitsLength() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionSet LINEN in CR2 using LL_USART_EnableLIN() function
- Other remaining configurations items related to LIN Mode (as Baud Rate, Word length, LIN Break Detection Length, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 CLKEN LL_USART_ConfigLINMode
- CR2 STOP LL_USART_ConfigLINMode
- CR2 LINEN LL_USART_ConfigLINMode
- CR3 IREN LL_USART_ConfigLINMode
- CR3 SCEN LL_USART_ConfigLINMode
- CR3 HDSEL LL_USART_ConfigLINMode

LL_USART_ConfigHalfDuplexMode

Function name

__STATIC_INLINE void LL_USART_ConfigHalfDuplexMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Half Duplex Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In Half Duplex mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,CLKEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register, This function also sets the UART/USART in Half Duplex mode.
- Macro IS_UART_HALFDUPLEX_INSTANCE(USARTx) can be used to check whether or not Half-Duplex mode is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionSet HDSEL in CR3 using LL_USART_EnableHalfDuplex() function
- Other remaining configurations items related to Half Duplex Mode (as Baud Rate, Word length, Parity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigHalfDuplexMode
- CR2 CLKEN LL_USART_ConfigHalfDuplexMode
- CR3 HDSEL LL_USART_ConfigHalfDuplexMode
- CR3 SCEN LL_USART_ConfigHalfDuplexMode
- CR3 IREN LL_USART_ConfigHalfDuplexMode

LL_USART_ConfigSmartcardMode

Function name

__STATIC_INLINE void LL_USART_ConfigSmartcardMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Smartcard Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In Smartcard mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also configures Stop bits to 1.5 bits and sets the USART in Smartcard mode (SCEN bit). Clock Output is also enabled (CLKEN).
- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionConfigure STOP in CR2 using LL_USART_SetStopBitsLength() functionSet CLKEN in CR2 using LL_USART_EnableSCLKOutput() functionSet SCEN in CR3 using LL_USART_EnableSmartcard() function
- Other remaining configurations items related to Smartcard Mode (as Baud Rate, Word length, Parity, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigSmartcardMode
- CR2 STOP LL_USART_ConfigSmartcardMode
- CR2 CLKEN LL_USART_ConfigSmartcardMode
- CR3 HDSEL LL_USART_ConfigSmartcardMode
- CR3 SCEN LL_USART_ConfigSmartcardMode

LL_USART_ConfigIrdaMode

Function name

__STATIC_INLINE void LL_USART_ConfigIrdaMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Irda Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In IRDA mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,STOP and CLKEN bits in the USART_CR2 register,SCEN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register. This function also sets the UART/USART in IRDA mode (IREN bit).
- Macro IS_IRDA_INSTANCE(USARTx) can be used to check whether or not IrDA feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() functionConfigure STOP in CR2 using LL_USART_SetStopBitsLength() functionSet IREN in CR3 using LL_USART_EnableIrda() function
- Other remaining configurations items related to Irda Mode (as Baud Rate, Word length, Power mode, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigIrdaMode
- CR2 CLKEN LL_USART_ConfigIrdaMode
- CR2 STOP LL_USART_ConfigIrdaMode
- CR3 SCEN LL_USART_ConfigIrdaMode
- CR3 HDSEL LL_USART_ConfigIrdaMode
- CR3 IREN LL_USART_ConfigIrdaMode

LL_USART_ConfigMultiProcessMode

Function name

__STATIC_INLINE void LL_USART_ConfigMultiProcessMode (USART_TypeDef * USARTx)

Function description

Perform basic configuration of USART for enabling use in Multi processor Mode (several USARTs connected in a network, one of the USARTs can be the master, its TX output connected to the RX inputs of the other slaves USARTs).

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- In MultiProcessor mode, the following bits must be kept cleared: LINEN bit in the USART_CR2 register,CLKEN bit in the USART_CR2 register,SCEN bit in the USART_CR3 register,IREN bit in the USART_CR3 register,HDSEL bit in the USART_CR3 register.
- Call of this function is equivalent to following function call sequence : Clear LINEN in CR2 using LL_USART_DisableLIN() functionClear CLKEN in CR2 using LL_USART_DisableSCLKOutput() functionClear SCEN in CR3 using LL_USART_DisableSmartcard() functionClear IREN in CR3 using LL_USART_DisableIrda() functionClear HDSEL in CR3 using LL_USART_DisableHalfDuplex() function
- Other remaining configurations items related to Multi processor Mode (as Baud Rate, Wake Up Method, Node address, ...) should be set using dedicated functions

Reference Manual to LL API cross reference:

- CR2 LINEN LL_USART_ConfigMultiProcessMode
- CR2 CLKEN LL_USART_ConfigMultiProcessMode
- CR3 SCEN LL_USART_ConfigMultiProcessMode
- CR3 HDSEL LL_USART_ConfigMultiProcessMode
- CR3 IREN LL_USART_ConfigMultiProcessMode

LL_USART_IsActiveFlag_PE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_PE (const USART_TypeDef * USARTx)

Function description

Check if the USART Parity Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR PE LL_USART_IsActiveFlag_PE

LL_USART_IsActiveFlag_FE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_FE (const USART_TypeDef * USARTx)

Function description

Check if the USART Framing Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR FE LL_USART_IsActiveFlag_FE

LL_USART_IsActiveFlag_NE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_NE (const USART_TypeDef * USARTx)

Function description

Check if the USART Noise error detected Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR NE LL_USART_IsActiveFlag_NE

LL_USART_IsActiveFlag_ORE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_ORE (const USART_TypeDef * USARTx)

Function description

Check if the USART OverRun Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR ORE LL_USART_IsActiveFlag_ORE

LL_USART_IsActiveFlag_IDLE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_IDLE (const USART_TypeDef * USARTx)

Function description

Check if the USART IDLE line detected Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR IDLE LL_USART_IsActiveFlag_IDLE

LL_USART_IsActiveFlag_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RXNE_RXFNE (const USART_TypeDef * USARTx)

Function description

Check if the USART Read Data Register or USART RX FIFO Not Empty Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR RXNE_RXFNE LL_USART_IsActiveFlag_RXNE_RXFNE

LL_USART_IsActiveFlag_TC

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TC (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmission Complete Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TC LL_USART_IsActiveFlag_TC

LL_USART_IsActiveFlag_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TXE_TXFNF (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmit Data Register Empty or USART TX FIFO Not Full Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR TXE_TXFNF LL_USART_IsActiveFlag_TXE_TXFNF

LL_USART_IsActiveFlag_LBD

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_LBD (const USART_TypeDef * USARTx)

Function description

Check if the USART LIN Break Detection Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR LBDF LL_USART_IsActiveFlag_LBD

LL_USART_IsActiveFlag_nCTS

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_nCTS (const USART_TypeDef * USARTx)

Function description

Check if the USART CTS interrupt Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR CTSIF LL_USART_IsActiveFlag_nCTS

LL_USART_IsActiveFlag_CTS

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_CTS (const USART_TypeDef * USARTx)

Function description

Check if the USART CTS Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR CTS LL_USART_IsActiveFlag_CTS

LL_USART_IsActiveFlag_RTO

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RTO (const USART_TypeDef * USARTx)

Function description

Check if the USART Receiver Time Out Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RTOF LL_USART_IsActiveFlag_RTO

LL_USART_IsActiveFlag_EOB

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_EOB (const USART_TypeDef * USARTx)

Function description

Check if the USART End Of Block Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR EOBF LL_USART_IsActiveFlag_EOB

LL_USART_IsActiveFlag_UDR

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_UDR (const USART_TypeDef * USARTx)

Function description

Check if the SPI Slave Underrun error flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR UDR LL_USART_IsActiveFlag_UDR

LL_USART_IsActiveFlag_ABRE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_ABRE (const USART_TypeDef * USARTx)

Function description

Check if the USART Auto-Baud Rate Error Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR ABRE LL_USART_IsActiveFlag_ABRE

LL_USART_IsActiveFlag_ABR

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_ABR (const USART_TypeDef * USARTx)

Function description

Check if the USART Auto-Baud Rate Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR ABRF LL_USART_IsActiveFlag_ABR

LL_USART_IsActiveFlag_BUSY

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_BUSY (const USART_TypeDef * USARTx)

Function description

Check if the USART Busy Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR BUSY LL_USART_IsActiveFlag_BUSY

LL_USART_IsActiveFlag_CM

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_CM (const USART_TypeDef * USARTx)

Function description

Check if the USART Character Match Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR CMF LL_USART_IsActiveFlag_CM

LL_USART_IsActiveFlag_SBK

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_SBK (const USART_TypeDef * USARTx)

Function description

Check if the USART Send Break Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR SBKF LL_USART_IsActiveFlag_SBK

LL_USART_IsActiveFlag_RWU

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RWU (const USART_TypeDef * USARTx)

Function description

Check if the USART Receive Wake Up from mute mode Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR RWU LL_USART_IsActiveFlag_RWU

LL_USART_IsActiveFlag_WKUP

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_WKUP (const USART_TypeDef * USARTx)

Function description

Check if the USART Wake Up from stop mode Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR WUF LL_USART_IsActiveFlag_WKUP

LL_USART_IsActiveFlag_TEACK

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TEACK (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmit Enable Acknowledge Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TEACK LL_USART_IsActiveFlag_TEACK

LL_USART_IsActiveFlag_REACK

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_REACK (const USART_TypeDef * USARTx)

Function description

Check if the USART Receive Enable Acknowledge Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR REACK LL_USART_IsActiveFlag_REACK

LL_USART_IsActiveFlag_TXFE

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TXFE (const USART_TypeDef * USARTx)

Function description

Check if the USART TX FIFO Empty Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR TXFE LL_USART_IsActiveFlag_TXFE

LL_USART_IsActiveFlag_RXFF

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RXFF (const USART_TypeDef * USARTx)

Function description

Check if the USART RX FIFO Full Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR RXFF LL_USART_IsActiveFlag_RXFF

LL_USART_IsActiveFlag_TCBGT

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TCBGT (const USART_TypeDef * USARTx)

Function description

Check if the Smartcard Transmission Complete Before Guard Time Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- ISR TCBGT LL_USART_IsActiveFlag_TCBGT

LL_USART_IsActiveFlag_TXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_TXFT (const USART_TypeDef * USARTx)

Function description

Check if the USART TX FIFO Threshold Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR TXFT LL_USART_IsActiveFlag_TXFT

LL_USART_IsActiveFlag_RXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsActiveFlag_RXFT (const USART_TypeDef * USARTx)

Function description

Check if the USART RX FIFO Threshold Flag is set or not.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ISR RXFT LL_USART_IsActiveFlag_RXFT

LL_USART_ClearFlag_PE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_PE (USART_TypeDef * USARTx)

Function description

Clear Parity Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR PECF LL_USART_ClearFlag_PE

LL_USART_ClearFlag_FE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_FE (USART_TypeDef * USARTx)

Function description

Clear Framing Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR FECF LL_USART_ClearFlag_FE

LL_USART_ClearFlag_NE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_NE (USART_TypeDef * USARTx)

Function description

Clear Noise Error detected Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR NECF LL_USART_ClearFlag_NE

LL_USART_ClearFlag_ORE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_ORE (USART_TypeDef * USARTx)

Function description

Clear OverRun Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR ORECF LL_USART_ClearFlag_ORE

LL_USART_ClearFlag_IDLE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_IDLE (USART_TypeDef * USARTx)

Function description

Clear IDLE line detected Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR IDLECF LL_USART_ClearFlag_IDLE

LL_USART_ClearFlag_TXFE

Function name

__STATIC_INLINE void LL_USART_ClearFlag_TXFE (USART_TypeDef * USARTx)

Function description

Clear TX FIFO Empty Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR TXFECF LL_USART_ClearFlag_TXFE

LL_USART_ClearFlag_TC

Function name

__STATIC_INLINE void LL_USART_ClearFlag_TC (USART_TypeDef * USARTx)

Function description

Clear Transmission Complete Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TCCF LL_USART_ClearFlag_TC

LL_USART_ClearFlag_TCBGT

Function name

__STATIC_INLINE void LL_USART_ClearFlag_TCBGT (USART_TypeDef * USARTx)

Function description

Clear Smartcard Transmission Complete Before Guard Time Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR TCBGTCF LL_USART_ClearFlag_TCBGT

LL_USART_ClearFlag_LBD

Function name

__STATIC_INLINE void LL_USART_ClearFlag_LBD (USART_TypeDef * USARTx)

Function description

Clear LIN Break Detection Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR LBDCF LL_USART_ClearFlag_LBD

LL_USART_ClearFlag_nCTS

Function name

__STATIC_INLINE void LL_USART_ClearFlag_nCTS (USART_TypeDef * USARTx)

Function description

Clear CTS Interrupt Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR CTSCF LL_USART_ClearFlag_nCTS

LL_USART_ClearFlag_RTO

Function name

__STATIC_INLINE void LL_USART_ClearFlag_RTO (USART_TypeDef * USARTx)

Function description

Clear Receiver Time Out Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR RTOCF LL_USART_ClearFlag_RTO

LL_USART_ClearFlag_EOB

Function name

__STATIC_INLINE void LL_USART_ClearFlag_EOB (USART_TypeDef * USARTx)

Function description

Clear End Of Block Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR EOBCF LL_USART_ClearFlag_EOB

LL_USART_ClearFlag_UDR

Function name

__STATIC_INLINE void LL_USART_ClearFlag_UDR (USART_TypeDef * USARTx)

Function description

Clear SPI Slave Underrun Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_SPI_SLAVE_INSTANCE(USARTx) can be used to check whether or not SPI Slave mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR UDRCF LL_USART_ClearFlag_UDR

LL_USART_ClearFlag_CM

Function name

__STATIC_INLINE void LL_USART_ClearFlag_CM (USART_TypeDef * USARTx)

Function description

Clear Character Match Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- ICR CMCF LL_USART_ClearFlag_CM

LL_USART_ClearFlag_WKUP

Function name

__STATIC_INLINE void LL_USART_ClearFlag_WKUP (USART_TypeDef * USARTx)

Function description

Clear Wake Up from stop mode Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- ICR WUCF LL_USART_ClearFlag_WKUP

LL_USART_EnableIT_IDLE

Function name

__STATIC_INLINE void LL_USART_EnableIT_IDLE (USART_TypeDef * USARTx)

Function description

Enable IDLE Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_USART_EnableIT_IDLE

LL_USART_EnableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_USART_EnableIT_RXNE_RXFNE (USART_TypeDef * USARTx)

Function description

Enable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_USART_EnableIT_RXNE_RXFNE

LL_USART_EnableIT_TC

Function name

__STATIC_INLINE void LL_USART_EnableIT_TC (USART_TypeDef * USARTx)

Function description

Enable Transmission Complete Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_USART_EnableIT_TC

LL_USART_EnableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_USART_EnableIT_TXE_TXFNF (USART_TypeDef * USARTx)

Function description

Enable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_USART_EnableIT_TXE_TXFNF

LL_USART_EnableIT_PE

Function name

__STATIC_INLINE void LL_USART_EnableIT_PE (USART_TypeDef * USARTx)

Function description

Enable Parity Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_USART_EnableIT_PE

LL_USART_EnableIT_CM

Function name

__STATIC_INLINE void LL_USART_EnableIT_CM (USART_TypeDef * USARTx)

Function description

Enable Character Match Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_USART_EnableIT_CM

LL_USART_EnableIT_RTO

Function name

__STATIC_INLINE void LL_USART_EnableIT_RTO (USART_TypeDef * USARTx)

Function description

Enable Receiver Timeout Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RTOIE LL_USART_EnableIT_RTO

LL_USART_EnableIT_EOB

Function name

__STATIC_INLINE void LL_USART_EnableIT_EOB (USART_TypeDef * USARTx)

Function description

Enable End Of Block Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 EOBIE LL_USART_EnableIT_EOB

LL_USART_EnableIT_TXFE

Function name

__STATIC_INLINE void LL_USART_EnableIT_TXFE (USART_TypeDef * USARTx)

Function description

Enable TX FIFO Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_USART_EnableIT_TXFE

LL_USART_EnableIT_RXFF

Function name

__STATIC_INLINE void LL_USART_EnableIT_RXFF (USART_TypeDef * USARTx)

Function description

Enable RX FIFO Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_USART_EnableIT_RXFF

LL_USART_EnableIT_LBD

Function name

__STATIC_INLINE void LL_USART_EnableIT_LBD (USART_TypeDef * USARTx)

Function description

Enable LIN Break Detection Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDIE LL_USART_EnableIT_LBD

LL_USART_EnableIT_ERROR

Function name

__STATIC_INLINE void LL_USART_EnableIT_ERROR (USART_TypeDef * USARTx)

Function description

Enable Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the USARTx_ISR register). 0: Interrupt is inhibited 1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the USARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_USART_EnableIT_ERROR

LL_USART_EnableIT_CTS

Function name

__STATIC_INLINE void LL_USART_EnableIT_CTS (USART_TypeDef * USARTx)

Function description

Enable CTS Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_USART_EnableIT_CTS

LL_USART_EnableIT_WKUP

Function name

__STATIC_INLINE void LL_USART_EnableIT_WKUP (USART_TypeDef * USARTx)

Function description

Enable Wake Up from Stop Mode Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 WUFIE LL_USART_EnableIT_WKUP

LL_USART_EnableIT_TXFT

Function name

__STATIC_INLINE void LL_USART_EnableIT_TXFT (USART_TypeDef * USARTx)

Function description

Enable TX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_USART_EnableIT_TXFT

LL_USART_EnableIT_TCBGT

Function name

__STATIC_INLINE void LL_USART_EnableIT_TCBGT (USART_TypeDef * USARTx)

Function description

Enable Smartcard Transmission Complete Before Guard Time Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TCBGTIE LL_USART_EnableIT_TCBGT

LL_USART_EnableIT_RXFT

Function name

__STATIC_INLINE void LL_USART_EnableIT_RXFT (USART_TypeDef * USARTx)

Function description

Enable RX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_USART_EnableIT_RXFT

LL_USART_DisableIT_IDLE

Function name

__STATIC_INLINE void LL_USART_DisableIT_IDLE (USART_TypeDef * USARTx)

Function description

Disable IDLE Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_USART_DisableIT_IDLE

LL_USART_DisableIT_RXNE_RXFNE

Function name

__STATIC_INLINE void LL_USART_DisableIT_RXNE_RXFNE (USART_TypeDef * USARTx)

Function description

Disable RX Not Empty and RX FIFO Not Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_USART_DisableIT_RXNE_RXFNE

LL_USART_DisableIT_TC

Function name

__STATIC_INLINE void LL_USART_DisableIT_TC (USART_TypeDef * USARTx)

Function description

Disable Transmission Complete Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 TCIE LL_USART_DisableIT_TC

LL_USART_DisableIT_TXE_TXFNF

Function name

__STATIC_INLINE void LL_USART_DisableIT_TXE_TXFNF (USART_TypeDef * USARTx)

Function description

Disable TX Empty and TX FIFO Not Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_USART_DisableIT_TXE_TXFNF

LL_USART_DisableIT_PE

Function name

__STATIC_INLINE void LL_USART_DisableIT_PE (USART_TypeDef * USARTx)

Function description

Disable Parity Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 PEIE LL_USART_DisableIT_PE

LL_USART_DisableIT_CM

Function name

__STATIC_INLINE void LL_USART_DisableIT_CM (USART_TypeDef * USARTx)

Function description

Disable Character Match Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 CMIE LL_USART_DisableIT_CM

LL_USART_DisableIT_RTO

Function name

__STATIC_INLINE void LL_USART_DisableIT_RTO (USART_TypeDef * USARTx)

Function description

Disable Receiver Timeout Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR1 RTOIE LL_USART_DisableIT_RTO

LL_USART_DisableIT_EOB

Function name

__STATIC_INLINE void LL_USART_DisableIT_EOB (USART_TypeDef * USARTx)

Function description

Disable End Of Block Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 EOBIE LL_USART_DisableIT_EOB

LL_USART_DisableIT_TXFE

Function name

__STATIC_INLINE void LL_USART_DisableIT_TXFE (USART_TypeDef * USARTx)

Function description

Disable TX FIFO Empty Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_USART_DisableIT_TXFE

LL_USART_DisableIT_RXFF

Function name

__STATIC_INLINE void LL_USART_DisableIT_RXFF (USART_TypeDef * USARTx)

Function description

Disable RX FIFO Full Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_USART_DisableIT_RXFF

LL_USART_DisableIT_LBD

Function name

__STATIC_INLINE void LL_USART_DisableIT_LBD (USART_TypeDef * USARTx)

Function description

Disable LIN Break Detection Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDIE LL_USART_DisableIT_LBD

LL_USART_DisableIT_ERROR

Function name

__STATIC_INLINE void LL_USART_DisableIT_ERROR (USART_TypeDef * USARTx)

Function description

Disable Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the USARTx_ISR register). 0: Interrupt is inhibited 1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the USARTx_ISR register.

Reference Manual to LL API cross reference:

- CR3 EIE LL_USART_DisableIT_ERROR

LL_USART_DisableIT_CTS

Function name

__STATIC_INLINE void LL_USART_DisableIT_CTS (USART_TypeDef * USARTx)

Function description

Disable CTS Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_USART_DisableIT_CTS

LL_USART_DisableIT_WKUP

Function name

__STATIC_INLINE void LL_USART_DisableIT_WKUP (USART_TypeDef * USARTx)

Function description

Disable Wake Up from Stop Mode Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 WUFIE LL_USART_DisableIT_WKUP

LL_USART_DisableIT_TXFT

Function name

__STATIC_INLINE void LL_USART_DisableIT_TXFT (USART_TypeDef * USARTx)

Function description

Disable TX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_USART_DisableIT_TXFT

LL_USART_DisableIT_TCBGT

Function name

__STATIC_INLINE void LL_USART_DisableIT_TCBGT (USART_TypeDef * USARTx)

Function description

Disable Smartcard Transmission Complete Before Guard Time Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TCBGTIE LL_USART_DisableIT_TCBGT

LL_USART_DisableIT_RXFT

Function name

__STATIC_INLINE void LL_USART_DisableIT_RXFT (USART_TypeDef * USARTx)

Function description

Disable RX FIFO Threshold Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_USART_DisableIT_RXFT

LL_USART_IsEnabledIT_IDLE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_IDLE (const USART_TypeDef * USARTx)

Function description

Check if the USART IDLE Interrupt source is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 IDLEIE LL_USART_IsEnabledIT_IDLE

LL_USART_IsEnabledIT_RXNE_RXFNE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RXNE_RXFNE (const USART_TypeDef * USARTx)

Function description

Check if the USART RX Not Empty and USART RX FIFO Not Empty Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXNEIE_RXFNEIE LL_USART_IsEnabledIT_RXNE_RXFNE

LL_USART_IsEnabledIT_TC

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TC (const USART_TypeDef * USARTx)

Function description

Check if the USART Transmission Complete Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 TCIE LL_USART_IsEnabledIT_TC

LL_USART_IsEnabledIT_TXE_TXFNF

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TXE_TXFNF (const USART_TypeDef * USARTx)

Function description

Check if the USART TX Empty and USART TX FIFO Not Full Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXEIE_TXFNFIE LL_USART_IsEnabledIT_TXE_TXFNF

LL_USART_IsEnabledIT_PE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_PE (const USART_TypeDef * USARTx)

Function description

Check if the USART Parity Error Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 PEIE LL_USART_IsEnabledIT_PE

LL_USART_IsEnabledIT_CM

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_CM (const USART_TypeDef * USARTx)

Function description

Check if the USART Character Match Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 CMIE LL_USART_IsEnabledIT_CM

LL_USART_IsEnabledIT_RTO

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RTO (const USART_TypeDef * USARTx)

Function description

Check if the USART Receiver Timeout Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR1 RTOIE LL_USART_IsEnabledIT_RTO

LL_USART_IsEnabledIT_EOB

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_EOB (const USART_TypeDef * USARTx)

Function description

Check if the USART End Of Block Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 EOBIE LL_USART_IsEnabledIT_EOB

LL_USART_IsEnabledIT_TXFE

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TXFE (const USART_TypeDef * USARTx)

Function description

Check if the USART TX FIFO Empty Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 TXFEIE LL_USART_IsEnabledIT_TXFE

LL_USART_IsEnabledIT_RXFF

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RXFF (const USART_TypeDef * USARTx)

Function description

Check if the USART RX FIFO Full Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR1 RXFFIE LL_USART_IsEnabledIT_RXFF

LL_USART_IsEnabledIT_LBD

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_LBD (const USART_TypeDef * USARTx)

Function description

Check if the USART LIN Break Detection Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_LIN_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR2 LBDIE LL_USART_IsEnabledIT_LBD

LL_USART_IsEnabledIT_ERROR

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_ERROR (const USART_TypeDef * USARTx)

Function description

Check if the USART Error Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 EIE LL_USART_IsEnabledIT_ERROR

LL_USART_IsEnabledIT_CTS

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_CTS (const USART_TypeDef * USARTx)

Function description

Check if the USART CTS Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_HWFLOW_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 CTSIE LL_USART_IsEnabledIT_CTS

LL_USART_IsEnabledIT_WKUP

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_WKUP (const USART_TypeDef * USARTx)

Function description

Check if the USART Wake Up from Stop Mode Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_WAKEUP_FROMSTOP_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 WUFIE LL_USART_IsEnabledIT_WKUP

LL_USART_IsEnabledIT_TXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TXFT (const USART_TypeDef * USARTx)

Function description

Check if USART TX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TXFTIE LL_USART_IsEnabledIT_TXFT

LL_USART_IsEnabledIT_TCBGT

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_TCBGT (const USART_TypeDef * USARTx)

Function description

Check if the Smartcard Transmission Complete Before Guard Time Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_SMARTCARD_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 TCBGTIE LL_USART_IsEnabledIT_TCBGT

LL_USART_IsEnabledIT_RXFT

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RXFT (const USART_TypeDef * USARTx)

Function description

Check if USART RX FIFO Threshold Interrupt is enabled or disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- CR3 RXFTIE LL_USART_IsEnabledIT_RXFT

LL_USART_EnableDMAReq_RX

Function name

__STATIC_INLINE void LL_USART_EnableDMAReq_RX (USART_TypeDef * USARTx)

Function description

Enable DMA Mode for reception.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_USART_EnableDMAReq_RX

LL_USART_DisableDMAReq_RX

Function name

__STATIC_INLINE void LL_USART_DisableDMAReq_RX (USART_TypeDef * USARTx)

Function description

Disable DMA Mode for reception.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAR LL_USART_DisableDMAReq_RX

LL_USART_IsEnabledDMAReq_RX

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDMAReq_RX (const USART_TypeDef * USARTx)

Function description

Check if DMA Mode is enabled for reception.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAR LL_USART_IsEnabledDMAReq_RX

LL_USART_EnableDMAReq_TX

Function name

__STATIC_INLINE void LL_USART_EnableDMAReq_TX (USART_TypeDef * USARTx)

Function description

Enable DMA Mode for transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_USART_EnableDMAReq_TX

LL_USART_DisableDMAReq_TX

Function name

__STATIC_INLINE void LL_USART_DisableDMAReq_TX (USART_TypeDef * USARTx)

Function description

Disable DMA Mode for transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DMAT LL_USART_DisableDMAReq_TX

LL_USART_IsEnabledDMAReq_TX

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDMAReq_TX (const USART_TypeDef * USARTx)

Function description

Check if DMA Mode is enabled for transmission.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DMAT LL_USART_IsEnabledDMAReq_TX

LL_USART_EnableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_USART_EnableDMADeactOnRxErr (USART_TypeDef * USARTx)

Function description

Enable DMA Disabling on Reception Error.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_USART_EnableDMADeactOnRxErr

LL_USART_DisableDMADeactOnRxErr

Function name

__STATIC_INLINE void LL_USART_DisableDMADeactOnRxErr (USART_TypeDef * USARTx)

Function description

Disable DMA Disabling on Reception Error.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- CR3 DDRE LL_USART_DisableDMADeactOnRxErr

LL_USART_IsEnabledDMADeactOnRxErr

Function name

__STATIC_INLINE uint32_t LL_USART_IsEnabledDMADeactOnRxErr (const USART_TypeDef * USARTx)

Function description

Indicate if DMA Disabling on Reception Error is disabled.

Parameters

- **USARTx:** USART Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR3 DDRE LL_USART_IsEnabledDMADeactOnRxErr

LL_USART_DMA_GetRegAddr

Function name

__STATIC_INLINE uint32_t LL_USART_DMA_GetRegAddr (const USART_TypeDef * USARTx, uint32_t Direction)

Function description

Get the data register address used for DMA transfer.

Parameters

- **USARTx:** USART Instance
- **Direction:** This parameter can be one of the following values:
  - LL_USART_DMA_REG_DATA_TRANSMIT
  - LL_USART_DMA_REG_DATA_RECEIVE

Return values

- **Address:** of data register

Reference Manual to LL API cross reference:

- RDR RDR LL_USART_DMA_GetRegAddr
-
- TDR TDR LL_USART_DMA_GetRegAddr

LL_USART_ReceiveData8

Function name

__STATIC_INLINE uint8_t LL_USART_ReceiveData8 (const USART_TypeDef * USARTx)

Function description

Read Receiver Data register (Receive Data value, 8 bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Reference Manual to LL API cross reference:

- RDR RDR LL_USART_ReceiveData8

LL_USART_ReceiveData9

Function name

__STATIC_INLINE uint16_t LL_USART_ReceiveData9 (const USART_TypeDef * USARTx)

Function description

Read Receiver Data register (Receive Data value, 9 bits)

Parameters

- **USARTx:** USART Instance

Return values

- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Reference Manual to LL API cross reference:

- RDR RDR LL_USART_ReceiveData9

LL_USART_TransmitData8

Function name

__STATIC_INLINE void LL_USART_TransmitData8 (USART_TypeDef * USARTx, uint8_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 8 bits)

Parameters

- **USARTx:** USART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0xFF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_USART_TransmitData8

LL_USART_TransmitData9

Function name

__STATIC_INLINE void LL_USART_TransmitData9 (USART_TypeDef * USARTx, uint16_t Value)

Function description

Write in Transmitter Data Register (Transmit Data value, 9 bits)

Parameters

- **USARTx:** USART Instance
- **Value:** between Min_Data=0x00 and Max_Data=0x1FF

Return values

- **None:**

Reference Manual to LL API cross reference:

- TDR TDR LL_USART_TransmitData9

LL_USART_RequestAutoBaudRate

Function name

__STATIC_INLINE void LL_USART_RequestAutoBaudRate (USART_TypeDef * USARTx)

Function description

Request an Automatic Baud Rate measurement on next received data frame.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_USART_AUTOBAUDRATE_DETECTION_INSTANCE(USARTx) can be used to check whether or not Auto Baud Rate detection feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- RQR ABRRQ LL_USART_RequestAutoBaudRate

LL_USART_RequestBreakSending

Function name

__STATIC_INLINE void LL_USART_RequestBreakSending (USART_TypeDef * USARTx)

Function description

Request Break sending.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR SBKRQ LL_USART_RequestBreakSending

LL_USART_RequestEnterMuteMode

Function name

__STATIC_INLINE void LL_USART_RequestEnterMuteMode (USART_TypeDef * USARTx)

Function description

Put USART in mute mode and set the RWU flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- RQR MMRQ LL_USART_RequestEnterMuteMode

LL_USART_RequestRxDataFlush

Function name

__STATIC_INLINE void LL_USART_RequestRxDataFlush (USART_TypeDef * USARTx)

Function description

Request a Receive Data and FIFO flush.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.
- Allows to discard the received data without reading them, and avoid an overrun condition.

Reference Manual to LL API cross reference:

- RQR RXFRQ LL_USART_RequestRxDataFlush

LL_USART_RequestTxDataFlush

Function name

__STATIC_INLINE void LL_USART_RequestTxDataFlush (USART_TypeDef * USARTx)

Function description

Request a Transmit data and FIFO flush.

Parameters

- **USARTx:** USART Instance

Return values

- **None:**

Notes

- Macro IS_UART_FIFO_INSTANCE(USARTx) can be used to check whether or not FIFO mode feature is supported by the USARTx instance.

Reference Manual to LL API cross reference:

- RQR TXFRQ LL_USART_RequestTxDataFlush

LL_USART_DeInit

Function name

ErrorStatus LL_USART_DeInit (const USART_TypeDef * USARTx)

Function description

De-initialize USART registers (Registers restored to their default values).

Parameters

- **USARTx:** USART Instance

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: USART registers are de-initialized
  - ERROR: USART registers are not de-initialized

LL_USART_Init

Function name

ErrorStatus LL_USART_Init (USART_TypeDef * USARTx, const LL_USART_InitTypeDef * USART_InitStruct)

Function description

Initialize USART registers according to the specified parameters in USART_InitStruct.

Parameters

- **USARTx:** USART Instance
- **USART_InitStruct:** pointer to a LL_USART_InitTypeDef structure that contains the configuration information for the specified USART peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: USART registers are initialized according to USART_InitStruct content
  - ERROR: Problem occurred during USART Registers initialization

Notes

- As some bits in USART configuration registers can only be written when the USART is disabled (USART_CR1_UE bit =0), USART Peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.
- Baud rate value stored in USART_InitStruct BaudRate field, should be valid (different from 0).

LL_USART_StructInit

Function name

void LL_USART_StructInit (LL_USART_InitTypeDef * USART_InitStruct)

Function description

Set each LL_USART_InitTypeDef field to default value.

Parameters

- **USART_InitStruct:** pointer to a LL_USART_InitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

LL_USART_ClockInit

Function name

ErrorStatus LL_USART_ClockInit (USART_TypeDef * USARTx, const LL_USART_ClockInitTypeDef * USART_ClockInitStruct)

Function description

Initialize USART Clock related settings according to the specified parameters in the USART_ClockInitStruct.

Parameters

- **USARTx:** USART Instance
- **USART_ClockInitStruct:** pointer to a LL_USART_ClockInitTypeDef structure that contains the Clock configuration information for the specified USART peripheral.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: USART registers related to Clock settings are initialized according to USART_ClockInitStruct content
  - ERROR: Problem occurred during USART Registers initialization

Notes

- As some bits in USART configuration registers can only be written when the USART is disabled (USART_CR1_UE bit =0), USART Peripheral should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.

LL_USART_ClockStructInit

Function name

void LL_USART_ClockStructInit (LL_USART_ClockInitTypeDef * USART_ClockInitStruct)

Function description

Set each field of a LL_USART_ClockInitTypeDef type structure to default value.

Parameters

- **USART_ClockInitStruct:** pointer to a LL_USART_ClockInitTypeDef structure whose fields will be set to default values.

Return values

- **None:**

127.3 USART Firmware driver defines

The following section lists the various define and macros of the module.

127.3.1 USART

USART

Address Length Detection

LL_USART_ADDRESS_DETECT_4B

4-bit address detection method selected

LL_USART_ADDRESS_DETECT_7B

7-bit address detection (in 8-bit data mode) method selected

Autobaud Detection

LL_USART_AUTOBAUD_DETECT_ON_STARTBIT

Measurement of the start bit is used to detect the baud rate

LL_USART_AUTOBAUD_DETECT_ON_FALLINGEDGE

Falling edge to falling edge measurement. Received frame must start with a single bit = 1 -> Frame = Start10xxxxxx

LL_USART_AUTOBAUD_DETECT_ON_7F_FRAME

0x7F frame detection

LL_USART_AUTOBAUD_DETECT_ON_55_FRAME

0x55 frame detection

Binary Data Inversion

LL_USART_BINARY_LOGIC_POSITIVE

Logical data from the data register are send/received in positive/direct logic. (1=H, 0=L)

LL_USART_BINARY_LOGIC_NEGATIVE

Logical data from the data register are send/received in negative/inverse logic. (1=L, 0=H). The parity bit is also inverted.

Bit Order

LL_USART_BITORDER_LSBFIRST

data is transmitted/received with data bit 0 first, following the start bit

LL_USART_BITORDER_MSBFIRST

data is transmitted/received with the MSB first, following the start bit

Clear Flags Defines

LL_USART_ICR_PECF

Parity error clear flag

LL_USART_ICR_FECF

Framing error clear flag

LL_USART_ICR_NECF

Noise error detected clear flag

LL_USART_ICR_ORECF

Overrun error clear flag

LL_USART_ICR_IDLECF

Idle line detected clear flag

LL_USART_ICR_TXFECF

TX FIFO Empty clear flag

LL_USART_ICR_TCCF

Transmission complete clear flag

LL_USART_ICR_TCBGTCF

Transmission completed before guard time clear flag

LL_USART_ICR_LBDCF

LIN break detection clear flag

LL_USART_ICR_CTSCF

CTS clear flag

LL_USART_ICR_RTOCF

Receiver timeout clear flag

LL_USART_ICR_EOBCF

End of block clear flag

LL_USART_ICR_UDRCF

SPI Slave Underrun clear flag

LL_USART_ICR_CMCF

Character match clear flag

LL_USART_ICR_WUCF

Wakeup from Stop mode clear flag

Clock Signal

LL_USART_CLOCK_DISABLE

Clock signal not provided

LL_USART_CLOCK_ENABLE

Clock signal provided

Datawidth

LL_USART_DATAWIDTH_7B

7 bits word length : Start bit, 7 data bits, n stop bits

LL_USART_DATAWIDTH_8B

8 bits word length : Start bit, 8 data bits, n stop bits

LL_USART_DATAWIDTH_9B

9 bits word length : Start bit, 9 data bits, n stop bits

Driver Enable Polarity

LL_USART_DE_POLARITY_HIGH

DE signal is active high

LL_USART_DE_POLARITY_LOW

DE signal is active low

Communication Direction

LL_USART_DIRECTION_NONE

Transmitter and Receiver are disabled

LL_USART_DIRECTION_RX

Transmitter is disabled and Receiver is enabled

LL_USART_DIRECTION_TX

Transmitter is enabled and Receiver is disabled

LL_USART_DIRECTION_TX_RX

Transmitter and Receiver are enabled

DMA Register Data

LL_USART_DMA_REG_DATA_TRANSMIT

Get address of data register used for transmission

LL_USART_DMA_REG_DATA_RECEIVE

Get address of data register used for reception

FIFO Threshold

LL_USART_FIFOTHRESHOLD_1_8

FIFO reaches 1/8 of its depth

LL_USART_FIFOTHRESHOLD_1_4

FIFO reaches 1/4 of its depth

LL_USART_FIFOTHRESHOLD_1_2

FIFO reaches 1/2 of its depth

LL_USART_FIFOTHRESHOLD_3_4

FIFO reaches 3/4 of its depth

LL_USART_FIFOTHRESHOLD_7_8

FIFO reaches 7/8 of its depth

LL_USART_FIFOTHRESHOLD_8_8

FIFO becomes empty for TX and full for RX

Get Flags Defines

LL_USART_ISR_PE

Parity error flag

LL_USART_ISR_FE

Framing error flag

LL_USART_ISR_NE

Noise detected flag

LL_USART_ISR_ORE

Overrun error flag

LL_USART_ISR_IDLE

Idle line detected flag

LL_USART_ISR_RXNE_RXFNE

Read data register or RX FIFO not empty flag

LL_USART_ISR_TC

Transmission complete flag

LL_USART_ISR_TXE_TXFNF

Transmit data register empty or TX FIFO Not Full flag

LL_USART_ISR_LBDF

LIN break detection flag

LL_USART_ISR_CTSIF

CTS interrupt flag

LL_USART_ISR_CTS

CTS flag

LL_USART_ISR_RTOF

Receiver timeout flag

LL_USART_ISR_EOBF

End of block flag

LL_USART_ISR_UDR

SPI Slave underrun error flag

LL_USART_ISR_ABRE

Auto baud rate error flag

LL_USART_ISR_ABRF

Auto baud rate flag

LL_USART_ISR_BUSY

Busy flag

LL_USART_ISR_CMF

Character match flag

LL_USART_ISR_SBKF

Send break flag

LL_USART_ISR_RWU

Receiver wakeup from Mute mode flag

LL_USART_ISR_WUF

Wakeup from Stop mode flag

LL_USART_ISR_TEACK

Transmit enable acknowledge flag

LL_USART_ISR_REACK

Receive enable acknowledge flag

LL_USART_ISR_TXFE

TX FIFO empty flag

LL_USART_ISR_RXFF

RX FIFO full flag

LL_USART_ISR_TCBGT

Transmission complete before guard time completion flag

LL_USART_ISR_RXFT

RX FIFO threshold flag

LL_USART_ISR_TXFT

TX FIFO threshold flag

Hardware Control

LL_USART_HWCONTROL_NONE

CTS and RTS hardware flow control disabled

LL_USART_HWCONTROL_RTS

RTS output enabled, data is only requested when there is space in the receive buffer

LL_USART_HWCONTROL_CTS

CTS mode enabled, data is only transmitted when the nCTS input is asserted (tied to 0)

LL_USART_HWCONTROL_RTS_CTS

CTS and RTS hardware flow control enabled

IrDA Power

LL_USART_IRDA_POWER_NORMAL

IrDA normal power mode

LL_USART_IRDA_POWER_LOW

IrDA low power mode

IT Defines

LL_USART_CR1_IDLEIE

IDLE interrupt enable

LL_USART_CR1_RXNEIE_RXFNEIE

Read data register and RXFIFO not empty interrupt enable

LL_USART_CR1_TCIE

Transmission complete interrupt enable

LL_USART_CR1_TXEIE_TXFNFIE

Transmit data register empty and TX FIFO not full interrupt enable

LL_USART_CR1_PEIE

Parity error

LL_USART_CR1_CMIE

Character match interrupt enable

LL_USART_CR1_RTOIE

Receiver timeout interrupt enable

LL_USART_CR1_EOBIE

End of Block interrupt enable

LL_USART_CR1_TXFEIE

TX FIFO empty interrupt enable

LL_USART_CR1_RXFFIE

RX FIFO full interrupt enable

LL_USART_CR2_LBDIE

LIN break detection interrupt enable

LL_USART_CR3_EIE

Error interrupt enable

LL_USART_CR3_CTSIE

CTS interrupt enable

LL_USART_CR3_WUFIE

Wakeup from Stop mode interrupt enable

LL_USART_CR3_TXFTIE

TX FIFO threshold interrupt enable

LL_USART_CR3_TCBGTIE

Transmission complete before guard time interrupt enable

LL_USART_CR3_RXFTIE

RX FIFO threshold interrupt enable

Last Clock Pulse

LL_USART_LASTCLKPULSE_NO_OUTPUT

The clock pulse of the last data bit is not output to the SCLK pin

LL_USART_LASTCLKPULSE_OUTPUT

The clock pulse of the last data bit is output to the SCLK pin

LIN Break Detection Length

LL_USART_LINBREAK_DETECT_10B

10-bit break detection method selected

LL_USART_LINBREAK_DETECT_11B

11-bit break detection method selected

Oversampling

LL_USART_OVERSAMPLING_16

Oversampling by 16

LL_USART_OVERSAMPLING_8

Oversampling by 8

Parity Control

LL_USART_PARITY_NONE

Parity control disabled

LL_USART_PARITY_EVEN

Parity control enabled and Even Parity is selected

LL_USART_PARITY_ODD

Parity control enabled and Odd Parity is selected

Clock Phase

LL_USART_PHASE_1EDGE

The first clock transition is the first data capture edge

LL_USART_PHASE_2EDGE

The second clock transition is the first data capture edge

Clock Polarity

LL_USART_POLARITY_LOW

Steady low value on SCLK pin outside transmission window

LL_USART_POLARITY_HIGH

Steady high value on SCLK pin outside transmission window

Clock Source Prescaler

LL_USART_PRESCALER_DIV1

Input clock not divided

LL_USART_PRESCALER_DIV2

Input clock divided by 2

LL_USART_PRESCALER_DIV4

Input clock divided by 4

LL_USART_PRESCALER_DIV6

Input clock divided by 6

LL_USART_PRESCALER_DIV8

Input clock divided by 8

LL_USART_PRESCALER_DIV10

Input clock divided by 10

LL_USART_PRESCALER_DIV12

Input clock divided by 12

LL_USART_PRESCALER_DIV16

Input clock divided by 16

LL_USART_PRESCALER_DIV32

Input clock divided by 32

LL_USART_PRESCALER_DIV64

Input clock divided by 64

LL_USART_PRESCALER_DIV128

Input clock divided by 128

LL_USART_PRESCALER_DIV256

Input clock divided by 256

RX Pin Active Level Inversion

LL_USART_RXPIN_LEVEL_STANDARD

RX pin signal works using the standard logic levels

LL_USART_RXPIN_LEVEL_INVERTED

RX pin signal values are inverted.

Stop Bits

LL_USART_STOPBITS_0_5

0.5 stop bit

LL_USART_STOPBITS_1

1 stop bit

LL_USART_STOPBITS_1_5

1.5 stop bits

LL_USART_STOPBITS_2

2 stop bits

TX Pin Active Level Inversion

LL_USART_TXPIN_LEVEL_STANDARD

TX pin signal works using the standard logic levels

LL_USART_TXPIN_LEVEL_INVERTED

TX pin signal values are inverted.

TX RX Pins Swap

LL_USART_TXRX_STANDARD

TX/RX pins are used as defined in standard pinout

LL_USART_TXRX_SWAPPED

TX and RX pins functions are swapped.

Wakeup

LL_USART_WAKEUP_IDLELINE

USART wake up from Mute mode on Idle Line

LL_USART_WAKEUP_ADDRESSMARK

USART wake up from Mute mode on Address Mark

Wakeup Activation

LL_USART_WAKEUP_ON_ADDRESS

Wake up active on address match

LL_USART_WAKEUP_ON_STARTBIT

Wake up active on Start bit detection

LL_USART_WAKEUP_ON_RXNE

Wake up active on RXNE

FLAG_Management

LL_USART_IsActiveFlag_RXNE

LL_USART_IsActiveFlag_TXE

IT_Management

LL_USART_EnableIT_RXNE

LL_USART_EnableIT_TXE

LL_USART_DisableIT_RXNE

LL_USART_DisableIT_TXE

LL_USART_IsEnabledIT_RXNE

LL_USART_IsEnabledIT_TXE

Exported_Macros_Helper

__LL_USART_DIV_SAMPLING8

Description:

- Compute USARTDIV value according to Peripheral Clock and expected Baud Rate in 8 bits sampling mode (32 bits value of USARTDIV is returned)

Parameters:

- __PERIPHCLK__: Peripheral Clock frequency used for USART instance
- __PRESCALER__: This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- __BAUDRATE__: Baud rate value to achieve

Return value:

- USARTDIV: value to be used for BRR register filling in OverSampling_8 case

__LL_USART_DIV_SAMPLING16

Description:

- Compute USARTDIV value according to Peripheral Clock and expected Baud Rate in 16 bits sampling mode (32 bits value of USARTDIV is returned)

Parameters:

- __PERIPHCLK__: Peripheral Clock frequency used for USART instance
- __PRESCALER__: This parameter can be one of the following values:
  - LL_USART_PRESCALER_DIV1
  - LL_USART_PRESCALER_DIV2
  - LL_USART_PRESCALER_DIV4
  - LL_USART_PRESCALER_DIV6
  - LL_USART_PRESCALER_DIV8
  - LL_USART_PRESCALER_DIV10
  - LL_USART_PRESCALER_DIV12
  - LL_USART_PRESCALER_DIV16
  - LL_USART_PRESCALER_DIV32
  - LL_USART_PRESCALER_DIV64
  - LL_USART_PRESCALER_DIV128
  - LL_USART_PRESCALER_DIV256
- __BAUDRATE__: Baud rate value to achieve

Return value:

- USARTDIV: value to be used for BRR register filling in OverSampling_16 case

Common Write and read registers Macros

LL_USART_WriteReg

Description:

- Write a value in USART register.

Parameters:

- __INSTANCE__: USART Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_USART_ReadReg

Description:

- Read a value in USART register.

Parameters:

- __INSTANCE__: USART Instance
- __REG__: Register to be read

Return value:

- Register: value

128 LL UTILS Generic Driver

128.1 UTILS Firmware driver registers structures

128.1.1 LL_UTILS_PLLInitTypeDef

LL_UTILS_PLLInitTypeDef is defined in the stm32h7xx_ll_utils.h

Data Fields

- ***uint32_t PLLM***
- ***uint32_t PLLN***
- ***uint32_t PLLP***
- ***uint32_t FRACN***
- ***uint32_t VCO_Input***
- ***uint32_t VCO_Output***

Field Documentation

- ***uint32_t LL_UTILS_PLLInitTypeDef::PLLM***

  Division factor for PLL VCO input clock. This parameter must be a number between Min_Data = 0 and Max_Data = 63This feature can be modified afterwards using unitary function **LL_RCC_PLL1_SetM()**.
- ***uint32_t LL_UTILS_PLLInitTypeDef::PLLN***

  Multiplication factor for PLL VCO output clock. This parameter must be a number between Min_Data = 4 and Max_Data = 512This feature can be modified afterwards using unitary function **LL_RCC_PLL1_SetN()**.
- ***uint32_t LL_UTILS_PLLInitTypeDef::PLLP***

  Division for the main system clock. This parameter must be a number between Min_Data = 2 and Max_Data = 128 odd division factors are not allowedThis feature can be modified afterwards using unitary function **LL_RCC_PLL1_SetP()**.
- ***uint32_t LL_UTILS_PLLInitTypeDef::FRACN***

  Fractional part of the multiplication factor for PLL VCO. This parameter can be a value between 0 and 8191This feature can be modified afterwards using unitary function **LL_RCC_PLL1_SetFRACN()**.
- ***uint32_t LL_UTILS_PLLInitTypeDef::VCO_Input***

  PLL clock Input range. This parameter can be a value of ***RCC_LL_EC_PLLINPUTRANGE***This feature can be modified afterwards using unitary function **LL_RCC_PLL1_SetVCOInputRange()**.
- ***uint32_t LL_UTILS_PLLInitTypeDef::VCO_Output***

  PLL clock Output range. This parameter can be a value of ***RCC_LL_EC_PLLVCORANGE***This feature can be modified afterwards using unitary function **LL_RCC_PLL1_SetVCOOutputRange()**.

128.1.2 LL_UTILS_ClkInitTypeDef

LL_UTILS_ClkInitTypeDef is defined in the stm32h7xx_ll_utils.h

Data Fields

- ***uint32_t SYSCLKDivider***
- ***uint32_t AHBCLKDivider***
- ***uint32_t APB1CLKDivider***
- ***uint32_t APB2CLKDivider***
- ***uint32_t APB3CLKDivider***
- ***uint32_t APB4CLKDivider***

Field Documentation

- ***uint32_t LL_UTILS_ClkInitTypeDef::SYSCLKDivider***

  The System clock (SYSCLK) divider. This clock is derived from the PLL output. This parameter can be a value of ***RCC_LL_EC_SYSCLK_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetSysPrescaler()**.

- ***uint32_t LL_UTILS_ClkInitTypeDef::AHBCLKDivider***

  The AHB clock (HCLK) divider. This clock is derived from the system clock (SYSCLK). This parameter can be a value of ***RCC_LL_EC_AHB_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAHBPrescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB1CLKDivider***

  The APB1 clock (PCLK1) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB1_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB1Prescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB2CLKDivider***

  The APB2 clock (PCLK2) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB2_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB2Prescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB3CLKDivider***

  The APB2 clock (PCLK3) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB3_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB3Prescaler()**.
- ***uint32_t LL_UTILS_ClkInitTypeDef::APB4CLKDivider***

  The APB4 clock (PCLK4) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of ***RCC_LL_EC_APB4_DIV***This feature can be modified afterwards using unitary function **LL_RCC_SetAPB4Prescaler()**.

128.2 UTILS Firmware driver API description

The following section lists the various functions of the UTILS library.

128.2.1 System Configuration functions

System, AHB and APB buses clocks configuration

- The maximum frequency of the SYSCLK is 480 MHz(*) and HCLK is 240 MHz.
- The maximum frequency of the PCLK1, PCLK2, PCLK3 and PCLK4 is 120 MHz.

This section contains the following APIs:

- ***LL_SetSystemCoreClock()***
- ***LL_PLL_ConfigSystemClock_HSI()***
- ***LL_PLL_ConfigSystemClock_HSE()***
- ***LL_SetFlashLatency()***

128.2.2 Detailed description of functions

LL_GetUID_Word0

Function name

__STATIC_INLINE uint32_t LL_GetUID_Word0 (void)

Function description

Get Word0 of the unique device identifier (UID based on 96 bits)

Return values

- **UID[31:0]:**

LL_GetUID_Word1

Function name

__STATIC_INLINE uint32_t LL_GetUID_Word1 (void)

Function description

Get Word1 of the unique device identifier (UID based on 96 bits)

Return values

- **UID[63:32]:**

LL_GetUID_Word2

Function name

__STATIC_INLINE uint32_t LL_GetUID_Word2 (void)

Function description

Get Word2 of the unique device identifier (UID based on 96 bits)

Return values

- **UID[95:64]:**

LL_GetFlashSize

Function name

__STATIC_INLINE uint32_t LL_GetFlashSize (void)

Function description

Get Flash memory size.

Return values

- **FLASH_SIZE[15:0]:** Flash memory size

Notes

- This bitfield indicates the size of the device Flash memory expressed in Kbytes. As an example, 0x040 corresponds to 64 Kbytes.

LL_GetPackageType

Function name

__STATIC_INLINE uint32_t LL_GetPackageType (void)

Function description

Get Package type.

Return values

- **Returned:** value can be one of the following values:
  - LL_UTILS_PACKAGETYPE_LQFP100
  - LL_UTILS_PACKAGETYPE_TQFP144
  - LL_UTILS_PACKAGETYPE_TQFP176_UFBGA176
  - LL_UTILS_PACKAGETYPE_LQFP208_TFBGA240
  - LL_UTILS_PACKAGETYPE_LQFP64 (*)
  - LL_UTILS_PACKAGETYPE_TFBGA100_LQFP100 (*)
  - LL_UTILS_PACKAGETYPE_LQFP100_SMPS (*)
  - LL_UTILS_PACKAGETYPE_TFBGA100_SMPS (*)
  - LL_UTILS_PACKAGETYPE_WLCSP132_SMPS (*)
  - LL_UTILS_PACKAGETYPE_LQFP144 (*)
  - LL_UTILS_PACKAGETYPE_LQFP144_SMPS (*)
  - LL_UTILS_PACKAGETYPE_UFBGA169 (*)
  - LL_UTILS_PACKAGETYPE_UFBGA176_LQFP176 (*)
  - LL_UTILS_PACKAGETYPE_LQFP176_SMPS (*)
  - LL_UTILS_PACKAGETYPE_UFBGA176_SMPS (*)
  - LL_UTILS_PACKAGETYPE_TFBGA216 (*)
  - LL_UTILS_PACKAGETYPE_TFBGA225 (*)
  - LL_UTILS_PACKAGETYPE_VFQFPN68_INDUS (*)
  - LL_UTILS_PACKAGETYPE_LQFP100_INDUS (*)
  - LL_UTILS_PACKAGETYPE_TFBGA100_INDUS (*)
  - LL_UTILS_PACKAGETYPE_WLCSP115_INDUS (*)
  - LL_UTILS_PACKAGETYPE_UFBGA144 (*)
  - LL_UTILS_PACKAGETYPE_LQFP144_INDUS (*)
  - LL_UTILS_PACKAGETYPE_UFBGA169_INDUS (*)
  - LL_UTILS_PACKAGETYPE_UFBGA176+25_INDUS (*)
  - LL_UTILS_PACKAGETYPE_LQFP176_INDUS (*)

  (*) Packages available on some STM32H7 lines only.

Notes

- For some SM32H7 lines, enabling the SYSCFG clock is mandatory. the SYSCFG clock enabling is ensured by LL_APB4_GRP1_EnableClock

LL_InitTick

Function name

__STATIC_INLINE void LL_InitTick (uint32_t HCLKFrequency, uint32_t Ticks)

Function description

This function configures the Cortex-M SysTick source of the time base.

Parameters

- **HCLKFrequency:** HCLK frequency in Hz (can be calculated thanks to RCC helper macro)
- **Ticks:** Number of ticks

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the SysTick configuration by calling this function, for a delay use rather osDelay RTOS service.

LL_Init1msTick

Function name

void LL_Init1msTick (uint32_t CPU_Frequency)

Function description

This function configures the Cortex-M SysTick source to have 1ms time base.

Parameters

- **CPU_Frequency:** Core frequency in Hz

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid changing the Systick configuration by calling this function, for a delay use rather osDelay RTOS service.
- CPU_Frequency can be calculated thanks to RCC helper macro or function LL_RCC_GetSystemClocksFreq LL_RCC_GetSystemClocksFreq() is used to calculate the CM7 clock frequency and __LL_RCC_CALC_HCLK_FREQ is used to calculate the CM4 clock frequency.

LL_mDelay

Function name

void LL_mDelay (uint32_t Delay)

Function description

This function provides accurate delay (in milliseconds) based on SysTick counter flag.

Parameters

- **Delay:** specifies the delay time length, in milliseconds.

Return values

- **None:**

Notes

- When a RTOS is used, it is recommended to avoid using blocking delay and use rather osDelay service.
- To respect 1ms timebase, user should call LL_Init1msTick function which will configure Systick to 1ms

LL_SetSystemCoreClock

Function name

void LL_SetSystemCoreClock (uint32_t CPU_Frequency)

Function description

This function sets directly SystemCoreClock CMSIS variable.

Parameters

- **CPU_Frequency:** Core frequency in Hz

Return values

- **None:**

Notes

- Variable can be calculated also through SystemCoreClockUpdate function.
- CPU_Frequency can be calculated thanks to RCC helper macro or function LL_RCC_GetSystemClocksFreq LL_RCC_GetSystemClocksFreq() is used to calculate the CM7 clock frequency and __LL_RCC_CALC_HCLK_FREQ is used to calculate the CM4 clock frequency.

LL_PLL_ConfigSystemClock_HSI

Function name

ErrorStatus LL_PLL_ConfigSystemClock_HSI (LL_UTILS_PLLInitTypeDef * UTILS_PLLInitStruct, LL_UTILS_ClkInitTypeDef * UTILS_ClkInitStruct)

Function description

This function configures system clock at maximum frequency with HSI as clock source of the PLL.

Parameters

- **UTILS_PLLInitStruct:** pointer to a LL_UTILS_PLLInitTypeDef structure that contains the configuration information for the PLL.
- **UTILS_ClkInitStruct:** pointer to a LL_UTILS_ClkInitTypeDef structure that contains the configuration information for the BUS prescalers.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: Max frequency configuration done
  - ERROR: Max frequency configuration not done

Notes

- The application need to ensure that PLL is disabled.
- Function is based on the following formula: PLL output frequency = (((HSI frequency / PLLM) * PLLN) / PLLP)PLLM: ensure that the VCO input frequency ranges from 1 to 16 MHz (PLLVCO_input = HSI frequency / PLLM)PLLN: ensure that the VCO output frequency is between 150 and 836 MHz or 128 to 560 MHz(***) (PLLVCO_output = PLLVCO_input * PLLN)PLLP: ensure that max frequency at 550000000 Hz(*), 480000000 Hz(**) or 280000000 Hz(***) is reach (PLLVCO_output / PLLP)

LL_PLL_ConfigSystemClock_HSE

Function name

ErrorStatus LL_PLL_ConfigSystemClock_HSE (uint32_t HSEFrequency, uint32_t HSEBypass, LL_UTILS_PLLInitTypeDef * UTILS_PLLInitStruct, LL_UTILS_ClkInitTypeDef * UTILS_ClkInitStruct)

Function description

This function configures system clock with HSE as clock source of the PLL.

Parameters

- **HSEFrequency:** Value between Min_Data = 4000000 and Max_Data = 48000000
- **HSEBypass:** This parameter can be one of the following values:
  - LL_UTILS_HSEBYPASS_ON
  - LL_UTILS_HSEBYPASS_OFF
- **UTILS_PLLInitStruct:** pointer to a LL_UTILS_PLLInitTypeDef structure that contains the configuration information for the PLL.
- **UTILS_ClkInitStruct:** pointer to a LL_UTILS_ClkInitTypeDef structure that contains the configuration information for the BUS prescalers.

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: Max frequency configuration done
  - ERROR: Max frequency configuration not done

Notes

- The application need to ensure that PLL is disabled.
- Function is based on the following formula: PLL output frequency = (((HSE frequency / PLLM) * PLLN) / PLLP)PLLM: ensure that the VCO input frequency ranges from 0.95 to 2.10 MHz (PLLVCO_input = HSE frequency / PLLM)PLLN: ensure that the VCO output frequency is between 150 and 836 MHz or 128 to 560 MHz(***) (PLLVCO_output = PLLVCO_input * PLLN)PLLP: ensure that max frequency at 550000000 Hz(*), 480000000 Hz(**) or 280000000 Hz(***) is reached (PLLVCO_output / PLLP)

LL_SetFlashLatency

Function name

ErrorStatus LL_SetFlashLatency (uint32_t HCLK_Frequency)

Function description

Update number of Flash wait states in line with new frequency and current voltage range.

Parameters

- **HCLK_Frequency:** HCLK frequency

Return values

- **An:** ErrorStatus enumeration value:
  - SUCCESS: Latency has been modified
  - ERROR: Latency cannot be modified

128.3 UTILS Firmware driver defines

The following section lists the various define and macros of the module.

128.3.1 UTILS

UTILS

HSE Bypass activation

LL_UTILS_HSEBYPASS_OFF

HSE Bypass is not enabled

LL_UTILS_HSEBYPASS_ON

HSE Bypass is enabled

PACKAGE TYPE

LL_UTILS_PACKAGETYPE_LQFP100

LQFP100 package type

LL_UTILS_PACKAGETYPE_TQFP144

TQFP144 package type

LL_UTILS_PACKAGETYPE_TQFP176_UFBGA176

TQFP176 or UFBGA176 package type

LL_UTILS_PACKAGETYPE_LQFP208_TFBGA240

LQFP208 or TFBGA240 package type

129 LL WWDG Generic Driver

129.1 WWDG Firmware driver API description

The following section lists the various functions of the WWDG library.

129.1.1 Detailed description of functions

LL_WWDG_Enable

Function name

__STATIC_INLINE void LL_WWDG_Enable (WWDG_TypeDef * WWDGx)

Function description

Enable Window Watchdog.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **None:**

Notes

- It is enabled by setting the WDGA bit in the WWDG_CR register, then it cannot be disabled again except by a reset. This bit is set by software and only cleared by hardware after a reset. When WDGA = 1, the watchdog can generate a reset.

Reference Manual to LL API cross reference:

- CR WDGA LL_WWDG_Enable

LL_WWDG_IsEnabled

Function name

__STATIC_INLINE uint32_t LL_WWDG_IsEnabled (WWDG_TypeDef * WWDGx)

Function description

Checks if Window Watchdog is enabled.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CR WDGA LL_WWDG_IsEnabled

LL_WWDG_SetCounter

Function name

__STATIC_INLINE void LL_WWDG_SetCounter (WWDG_TypeDef * WWDGx, uint32_t Counter)

Function description

Set the Watchdog counter value to provided value (7-bits T[6:0])

Parameters

- **WWDGx:** WWDG Instance
- **Counter:** 0..0x7F (7 bit counter value)

Return values

- **None:**

Notes

- When writing to the WWDG_CR register, always write 1 in the MSB b6 to avoid generating an immediate reset This counter is decremented every (4096 x 2expWDGTB) PCLK cycles A reset is produced when it rolls over from 0x40 to 0x3F (bit T6 becomes cleared) Setting the counter lower then 0x40 causes an immediate reset (if WWDG enabled)

Reference Manual to LL API cross reference:

- CR T LL_WWDG_SetCounter

LL_WWDG_GetCounter

Function name

__STATIC_INLINE uint32_t LL_WWDG_GetCounter (WWDG_TypeDef * WWDGx)

Function description

Return current Watchdog Counter Value (7 bits counter value)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **7:** bit Watchdog Counter value

Reference Manual to LL API cross reference:

- CR T LL_WWDG_GetCounter

LL_WWDG_SetPrescaler

Function name

__STATIC_INLINE void LL_WWDG_SetPrescaler (WWDG_TypeDef * WWDGx, uint32_t Prescaler)

Function description

Set the time base of the prescaler (WDGTB).

Parameters

- **WWDGx:** WWDG Instance
- **Prescaler:** This parameter can be one of the following values:
  - LL_WWDG_PRESCALER_1
  - LL_WWDG_PRESCALER_2
  - LL_WWDG_PRESCALER_4
  - LL_WWDG_PRESCALER_8
  - LL_WWDG_PRESCALER_16
  - LL_WWDG_PRESCALER_32
  - LL_WWDG_PRESCALER_64
  - LL_WWDG_PRESCALER_128

Return values

- **None:**

Notes

- Prescaler is used to apply ratio on PCLK clock, so that Watchdog counter is decremented every (4096 x 2expWDGTB) PCLK cycles

Reference Manual to LL API cross reference:

- CFR WDGTB LL_WWDG_SetPrescaler

LL_WWDG_GetPrescaler

Function name

__STATIC_INLINE uint32_t LL_WWDG_GetPrescaler (WWDG_TypeDef * WWDGx)

Function description

Return current Watchdog Prescaler Value.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **Returned:** value can be one of the following values:
  - LL_WWDG_PRESCALER_1
  - LL_WWDG_PRESCALER_2
  - LL_WWDG_PRESCALER_4
  - LL_WWDG_PRESCALER_8
  - LL_WWDG_PRESCALER_16
  - LL_WWDG_PRESCALER_32
  - LL_WWDG_PRESCALER_64
  - LL_WWDG_PRESCALER_128

Reference Manual to LL API cross reference:

- CFR WDGTB LL_WWDG_GetPrescaler

LL_WWDG_SetWindow

Function name

__STATIC_INLINE void LL_WWDG_SetWindow (WWDG_TypeDef * WWDGx, uint32_t Window)

Function description

Set the Watchdog Window value to be compared to the downcounter (7-bits W[6:0]).

Parameters

- **WWDGx:** WWDG Instance
- **Window:** 0x00..0x7F (7 bit Window value)

Return values

- **None:**

Notes

- This window value defines when write in the WWDG_CR register to program Watchdog counter is allowed. Watchdog counter value update must occur only when the counter value is lower than the Watchdog window register value. Otherwise, a MCU reset is generated if the 7-bit Watchdog counter value (in the control register) is refreshed before the downcounter has reached the watchdog window register value. Physically is possible to set the Window lower then 0x40 but it is not recommended. To generate an immediate reset, it is possible to set the Counter lower than 0x40.

Reference Manual to LL API cross reference:

- CFR W LL_WWDG_SetWindow

LL_WWDG_GetWindow

Function name

__STATIC_INLINE uint32_t LL_WWDG_GetWindow (WWDG_TypeDef * WWDGx)

Function description

Return current Watchdog Window Value (7 bits value)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **7:** bit Watchdog Window value

Reference Manual to LL API cross reference:

- CFR W LL_WWDG_GetWindow

LL_WWDG_IsActiveFlag_EWKUP

Function name

__STATIC_INLINE uint32_t LL_WWDG_IsActiveFlag_EWKUP (WWDG_TypeDef * WWDGx)

Function description

Indicates if the WWDG Early Wakeup Interrupt Flag is set or not.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **State:** of bit (1 or 0).

Notes

- This bit is set by hardware when the counter has reached the value 0x40. It must be cleared by software by writing 0. A write of 1 has no effect. This bit is also set if the interrupt is not enabled.

Reference Manual to LL API cross reference:

- SR EWIF LL_WWDG_IsActiveFlag_EWKUP

LL_WWDG_ClearFlag_EWKUP

Function name

__STATIC_INLINE void LL_WWDG_ClearFlag_EWKUP (WWDG_TypeDef * WWDGx)

Function description

Clear WWDG Early Wakeup Interrupt Flag (EWIF)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **None:**

Reference Manual to LL API cross reference:

- SR EWIF LL_WWDG_ClearFlag_EWKUP

LL_WWDG_EnableIT_EWKUP

Function name

__STATIC_INLINE void LL_WWDG_EnableIT_EWKUP (WWDG_TypeDef * WWDGx)

Function description

Enable the Early Wakeup Interrupt.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **None:**

Notes

- When set, an interrupt occurs whenever the counter reaches value 0x40. This interrupt is only cleared by hardware after a reset

Reference Manual to LL API cross reference:

- CFR EWI LL_WWDG_EnableIT_EWKUP

LL_WWDG_IsEnabledIT_EWKUP

Function name

__STATIC_INLINE uint32_t LL_WWDG_IsEnabledIT_EWKUP (WWDG_TypeDef * WWDGx)

Function description

Check if Early Wakeup Interrupt is enabled.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **State:** of bit (1 or 0).

Reference Manual to LL API cross reference:

- CFR EWI LL_WWDG_IsEnabledIT_EWKUP

129.2 WWDG Firmware driver defines

The following section lists the various define and macros of the module.

129.2.1 WWDG

WWDG

IT Defines

LL_WWDG_CFR_EWI

PRESCALER

LL_WWDG_PRESCALER_1

WWDG counter clock = (PCLK1/4096)/1

LL_WWDG_PRESCALER_2

WWDG counter clock = (PCLK1/4096)/2

LL_WWDG_PRESCALER_128

WWDG counter clock = (PCLK1/4096)/128

Common Write and read registers macros

LL_WWDG_WriteReg

Description:

- Write a value in WWDG register.

Parameters:

- __INSTANCE__: WWDG Instance
- __REG__: Register to be written
- __VALUE__: Value to be written in the register

Return value:

- None

LL_WWDG_ReadReg

Description:

- Read a value in WWDG register.

Parameters:

- __INSTANCE__: WWDG Instance
- __REG__: Register to be read

Return value:

- Register: value

130 FAQs

General subjects

Why should I use the HAL drivers?

There are many advantages in using the HAL drivers:

- Ease of use: you can use the HAL drivers to configure and control any peripheral embedded within your STM32 MCU without prior in-depth knowledge of the product.
- HAL drivers provide intuitive and ready-to-use APIs to configure the peripherals and support polling, interrupt and DMA programming model to accommodate all application requirements, thus allowing the end-user to build a complete application by calling a few APIs.
- Higher level of abstraction than a standard peripheral library allowing to transparently manage:
  - Data transfers and processing using blocking mode (polling) or non-blocking mode (interrupt or DMA)
  - Error management through peripheral error detection and timeout mechanism.
- Generic architecture speeding up initialization and porting, thus allowing customers to focus on innovation.
- Generic set of APIs with full compatibility across the STM32 Series/lines, to ease the porting task between STM32 MCUs.
- The APIs provided within the HAL drivers are feature-oriented and do not require in-depth knowledge of peripheral operation.
- The APIs provided are modular. They include initialization, IO operation and control functions. The end-user has to call init function, then start the process by calling one IO operation functions (write, read, transmit, receive, …). Most of the peripherals have the same architecture.
- The number of functions required to build a complete and useful application is very reduced. As an example, to build a UART communication process, the user only has to call HAL_UART_Init() then HAL_UART_Transmit() or HAL_UART_Receive().

Which devices are supported by the HAL drivers?

The HAL drivers are developed to support all STM32H7 devices. To ensure compatibility between all devices and portability with others Series and lines, the API is split into the generic and the extension APIs . For more details, please refer to *section* ***Devices supported by the HAL drivers***.

What is the cost of using HAL drivers in term of code size and performance?

Like generic architecture drivers, the HAL drivers may induce firmware overhead.

This is due to the high abstraction level and ready-to-use APIs which allow data transfers, errors management and offloads the user application from implementation details.

Architecture

How many files should I modify to configure the HAL drivers?

Only one file needs to be modified: stm32h7xx_hal_conf.h. You can modify this file by disabling unused modules, or adjusting some parameters (i.e. HSE value, System configuration…)

A template is provided in the HAL drivers folders (stm32h7xx_hal_conf_template.c).

Which header files should I include in my application to use the HAL drivers?

Only stm32h7xx_hal.h file has to be included.

What is the difference between xx_hal_ppp.c/.h and xx_hal_ppp_ *ex* .c/.h?

The HAL driver architecture supports common features across STM32 Series/lines. To support specific features, the drivers are split into two groups.

- The generic APIs (stm32h7xx_hal_ppp.c): It includes the common set of APIs across all the STM32 product lines

- The extension APIs (stm32h7xx_hal_ppp_ex.c): It includes the specific APIs for specific device part number or family.

Initialization and I/O operation functions

How do I configure the system clock?

Unlike the standard library, the system clock configuration is not performed in CMSIS drivers file (system_stm32h7xx.c) but in the main user application by calling the two main functions, HAL_RCC_OscConfig() and HAL_RCC_ClockConfig(). It can be modified in any user application section.

What is the purpose of the *PPP_HandleTypeDef *pHandle* structure located in each driver in addition to the Initialization structure

PPP_HandleTypeDef *pHandle is the main structure implemented in the HAL drivers. It handles the peripheral configuration and registers, and embeds all the structures and variables required to follow the peripheral device flow (pointer to buffer, Error code, State,...)

However, this structure is not required to service peripherals such as GPIO, SYSTICK, PWR, and RCC.

What is the purpose of HAL_PPP_MspInit() and HAL_PPP_MspDeInit() functions?

These function are called within HAL_PPP_Init() and HAL_PPP_DeInit(), respectively. They are used to perform the low level Initialization/de-initialization related to the additional hardware resources (RCC, GPIO, NVIC and DMA).

These functions are declared in stm32h7xx_hal_msp.c. A template is provided in the HAL driver folders (stm32h7xx_hal_msp_template.c).

When and how should I use callbacks functions (functions declared with the attribute *__weak*)?

Use callback functions for the I/O operations used in DMA or interrupt mode. The PPP process complete callbacks are called to inform the user about process completion in real-time event mode (interrupts).

The Errors callbacks are called when a processing error occurs in DMA or interrupt mode. These callbacks are customized by the user to add user proprietary code. They can be declared in the application. Note that the same process completion callbacks are used for DMA and interrupt mode.

Is it mandatory to use HAL_Init() function at the beginning of the user application?

It is mandatory to use HAL_Init() function to enable the system configuration (Prefetch, Data instruction cache,…), configure the systTick and the NVIC priority grouping and the hardware low level initialization.

The SysTick configuration shall be adjusted by calling ***HAL_RCC_ClockConfig()*** function, to obtain 1 ms whatever the system clock.

Why do I need to configure the SysTick timer to use the HAL drivers?

The SysTick timer is configured to be used to generate variable increments by calling *HAL_IncTick()* function in SysTick ISR and retrieve the value of this variable by calling *HAL_GetTick()* function.

The call HAL_GetTick() function is mandatory when using HAL drivers with Polling Process or when using HAL_Delay().

Why is the SysTick timer configured to have 1 ms?

This is mandatory to ensure correct IO operation in particular for polling mode operation where the 1 ms is required as timebase.

Could HAL_Delay() function block my application under certain conditions?

Care must be taken when using HAL_Delay() since this function provides accurate delay based on a variable incremented in SysTick ISR. This implies that if HAL_Delay() is called from a peripheral ISR process, then the SysTick interrupt must have higher priority (numerically lower) than the peripheral interrupt, otherwise the caller ISR process will be blocked. Use HAL_NVIC_SetPriority() function to change the SysTick interrupt priority.

What programming model sequence should I follow to use HAL drivers ?

Follow the sequence below to use the APIs provided in the HAL drivers:

1. Call HAL_Init() function to initialize the system (data cache, NVIC priority,…).
2. Initialize the system clock by calling HAL_RCC_OscConfig() followed by HAL_RCC_ClockConfig().
3. Add HAL_IncTick() function under SysTick_Handler() ISR function to enable polling process when using HAL_Delay() function
4. Start initializing your peripheral by calling HAL_PPP_Init().
5. Implement the hardware low level initialization (Peripheral clock, GPIO, DMA,..) by calling HAL_PPP_MspInit() instm32h7xx_hal_msp.c
6. Start your process operation by calling IO operation functions.

What is the purpose of HAL_PPP_IRQHandler() function and when should I use it?

HAL_PPP_IRQHandler() is used to handle interrupt process. It is called under PPP_IRQHandler() function in stm32h7xx_it.c. In this case, the end-user has to implement only the callbacks functions (prefixed by __weak) to perform the appropriate action when an interrupt is detected. Advanced users can implement their own code in PPP_IRQHandler() without calling HAL_PPP_IRQHandler().

Can I use directly the macros defined in xx_hal_ppp.h ?

Yes, you can: a set of macros is provided with the APIs. They allow accessing directly some specific features using peripheral flags.

Where must PPP_HandleTypedef structure peripheral handler be declared?

PPP_HandleTypedef structure peripheral handler must be declared as a global variable, so that all the structure fields are set to 0 by default. In this way, the peripheral handler default state are set to HAL_PPP_STATE_RESET, which is the default state for each peripheral after a system reset.

When should I use HAL versus LL drivers?

HAL drivers offer high-level and function-oriented APIs, with a high level of portability. Product/IPs complexity is hidden for end users. LL drivers offer low-level APIs at registers level, with a better optimization but less portability. They require a deep knowledge of product/IPs specifications.

How can I include LL drivers in my environment? Is there any LL configuration file as for HAL?

There is no configuration file. Source code shall directly include the necessary stm32h7xx_ll_ppp.h file(s).

Can I use HAL and LL drivers together? If yes, what are the constraints?

It is possible to use both HAL and LL drivers. One can handle the IP initialization phase with HAL and then manage the I/O operations with LL drivers. The major difference between HAL and LL is that HAL drivers require to create and use handles for operation management while LL drivers operates directly on peripheral registers. Mixing HAL and LL is illustrated in Examples_MIX example.

Is there any LL APIs which are not available with HAL?

Yes, there are. A few Cortex® APIs have been added in stm32h7xx_ll_cortex.h e.g. for accessing SCB or SysTick registers.

Why are SysTick interrupts not enabled on LL drivers?

When using LL drivers in standalone mode, you do not need to enable SysTick interrupts because they are not used in LL APIs, while HAL functions requires SysTick interrupts to manage timeouts.

Revision history

Table 25. **Document revision history**

Date	Revision	Changes
11-May-2017	1	Initial release.
12-Jan-2018	2	Changed ARM into Arm in the whole document. Updated typical clock configuration sequence in System clock initialization. Updated DMA generic and extension drivers, Flash generic and extension drivers, System driver, NAND Flash generic driver, PCD generic and extension drivers, RCC generic and extension drivers, SPDIFRX generic driver, SPI generic and extension drivers.
05-Apr-2019	3	Added STM32CubeH7 low-layer drivers. Added dual-core STM32H7 microcontrollers.
20-Dec-2019	4	Added support for STM32H7A3/7B3 line and STM32H7B0 Value line. Added DTS, GFXMMU, OCTOSPI, OTFDEC and PSSI in Section 2 Acronyms and definitions. Updated Section 4.4 Devices supported by HAL drivers. Updated list of stm32h7xxx.h files in Section 4.5.1 HAL API naming rules. Added caution note related to firmware power configuration versus hardware board configuration in Section 4.12.2.2 System clock initialization. Added FAQs section.
02-Jul-2020	5	Updated Section 2 Acronyms and definitions. Updated list of stm32h7xxx.h files in Section 4.5.1 HAL API naming rules. Added STM32H723/H733, STM32H725/H735 and STM32H730 Value line part numbers in Table 5. List of devices supported by HAL drivers.
14-Dec-2022	6	Added the following HAL drivers: Section 7 HAL System Driver, Section 66 HAL QSPI Generic Driver, and Section 82 HAL SMBUS Extension Driver. Updated Section 27 HAL ETH Generic Driver, Section 28 HAL ETH Extension Driver, and Section 11 HAL COMP Generic Driver.
