

# Reliable, Convenient, Safe, and Energy-Efficient Building Automation Systems

Turing Think Intelligence Technology Co., Ltd.

## Credentials and Background

- Certification by KNX Association:
  - KS-07B0-Linux Stack (Only 3 worldwide)
  - KS-07B0-FreeRTOS Stack
- Patent:
  - KS-07B0 KNX System B Stack Software
  - Time Synchronization Software for KNX V1.0
  - A communication method and storage medium based on the HBES extended communication protocol

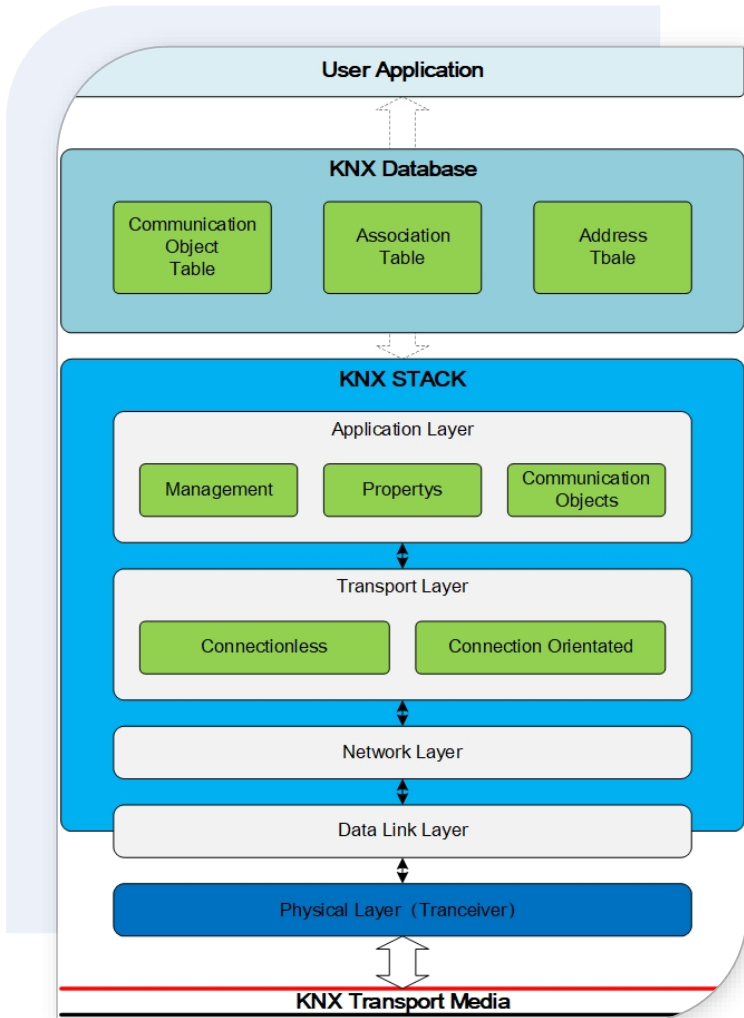

## Empowering Services

- Product & technical solution consulting services;
- Customized product design and development services;
- KNX testing and certification support services;
- KNX development training

## Product Assistance

- KNX Stack;
- Demo equipment and circuit design reference

01

## KS-07B0 Linux

For high-performance MPUs and the Linux system

02

## KS-07B0 FreeRTOS

For low-cost MCUs and the FreeRTOS system

03

## Standardization of KS-07B0

Strictly following the KNX standard for stack layering

04

## KS-07B0 Applicability

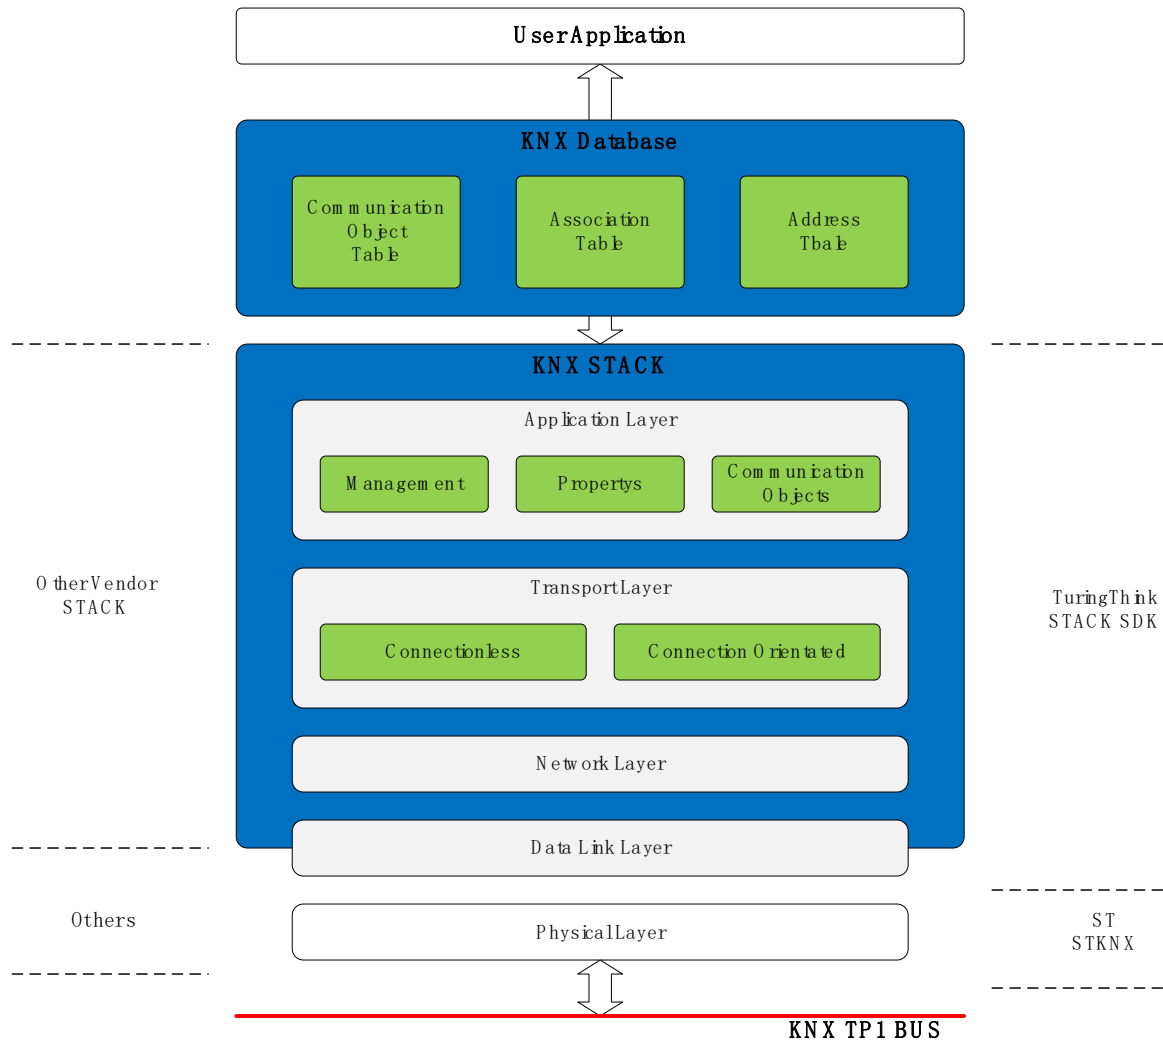

Applicable to all types of KNX-TP devices and KNX Transceivers; fully implemented based on the operating system with no limitations on group objects and group addresses.

## Features Summary:

- Based on FreeRTOS or Linux system
- No restriction on the selection of ST MCUs/MPUs
- No limitation on the number of group objects and communication objects
- Memory management functionality based on the operating system
- Simple user application interaction, supporting a wide range of value-added applications.

## KS-07B0 Stack and EasyHBES Value-added

- Upgrade support for EasyHBES technology specification, achieving ETS-free debugging
- OTA, firmware/database version updates for terminal device
- Supports seamless integration of the DALI stack
- Supports seamless integration with the HomeKit ecosystem."

## KNX-DALI Gateway

- MCU: ST STM32F427VIT6
- Transceiver: ST KNX
- OS: FreeRTOS

## KNX Keypad Panels

- MCU: ST STM32F103RCT6
- Transceiver: ST STKNX
- OS: FreeRTOS

## KNX Dimming Actuator

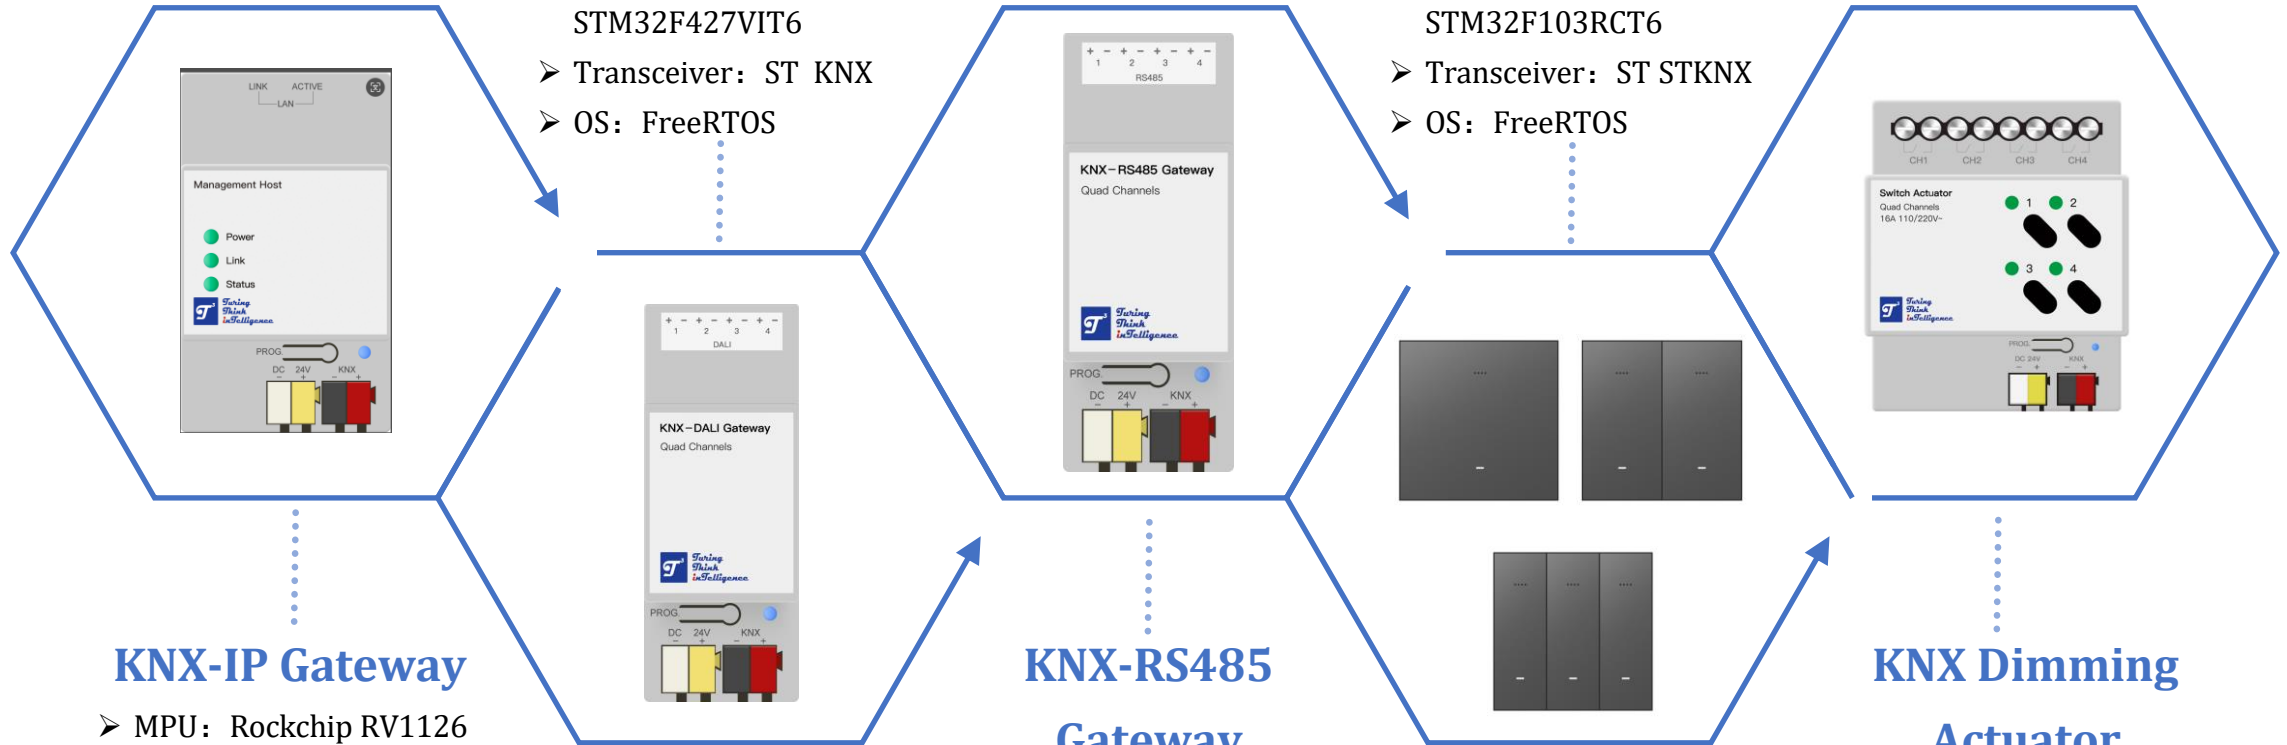

- MCU: ST STM32G070RBT6
- Transceiver: ST KNX
- OS: FreeRTOS

## KNX-IP Gateway

- MPU: Rockchip RV1126
- Transceivers: STKNX
- OS: Linux

## KNX-RS485 Gateway

- MCU: ST STM32F427VIT6
- Transceiver: ST KNX
- OS: FreeRTOS

基于STM32G070CBT6+STKNX+STISO621+L6983N33+FreeRTOS操作系统的KNX终端设备开发评估...

深圳图灵思智能科技有限公司是专业的HBES（住宅与楼宇电子系统）技术解决方案提供商，主要基于KNX、DALI、DMX512等开放式行业标准，为建筑智能化行业的制造商提供全栈技术解决方案。深圳图灵思智能科技有限公司主要提供标准KNX协议栈。符合Profile 07B0的协议栈包括基于Linux操作系统和FreeRTOS操作系统的两个版本，可支持开发所有规格的KNX终端设备，且可以适配..

Code execution within MCU combined with STKNX Transceiver to achieve a fast, low-cost, and seamless **replacement** for Onsemi and Siemens Transceiver solutions

## STKNX EVM

- MCU: ST STM32G070CBT6
- Transceiver: ST STKNX
- Isolator: ST STIOS621
- DC-DC: ST L6983N33

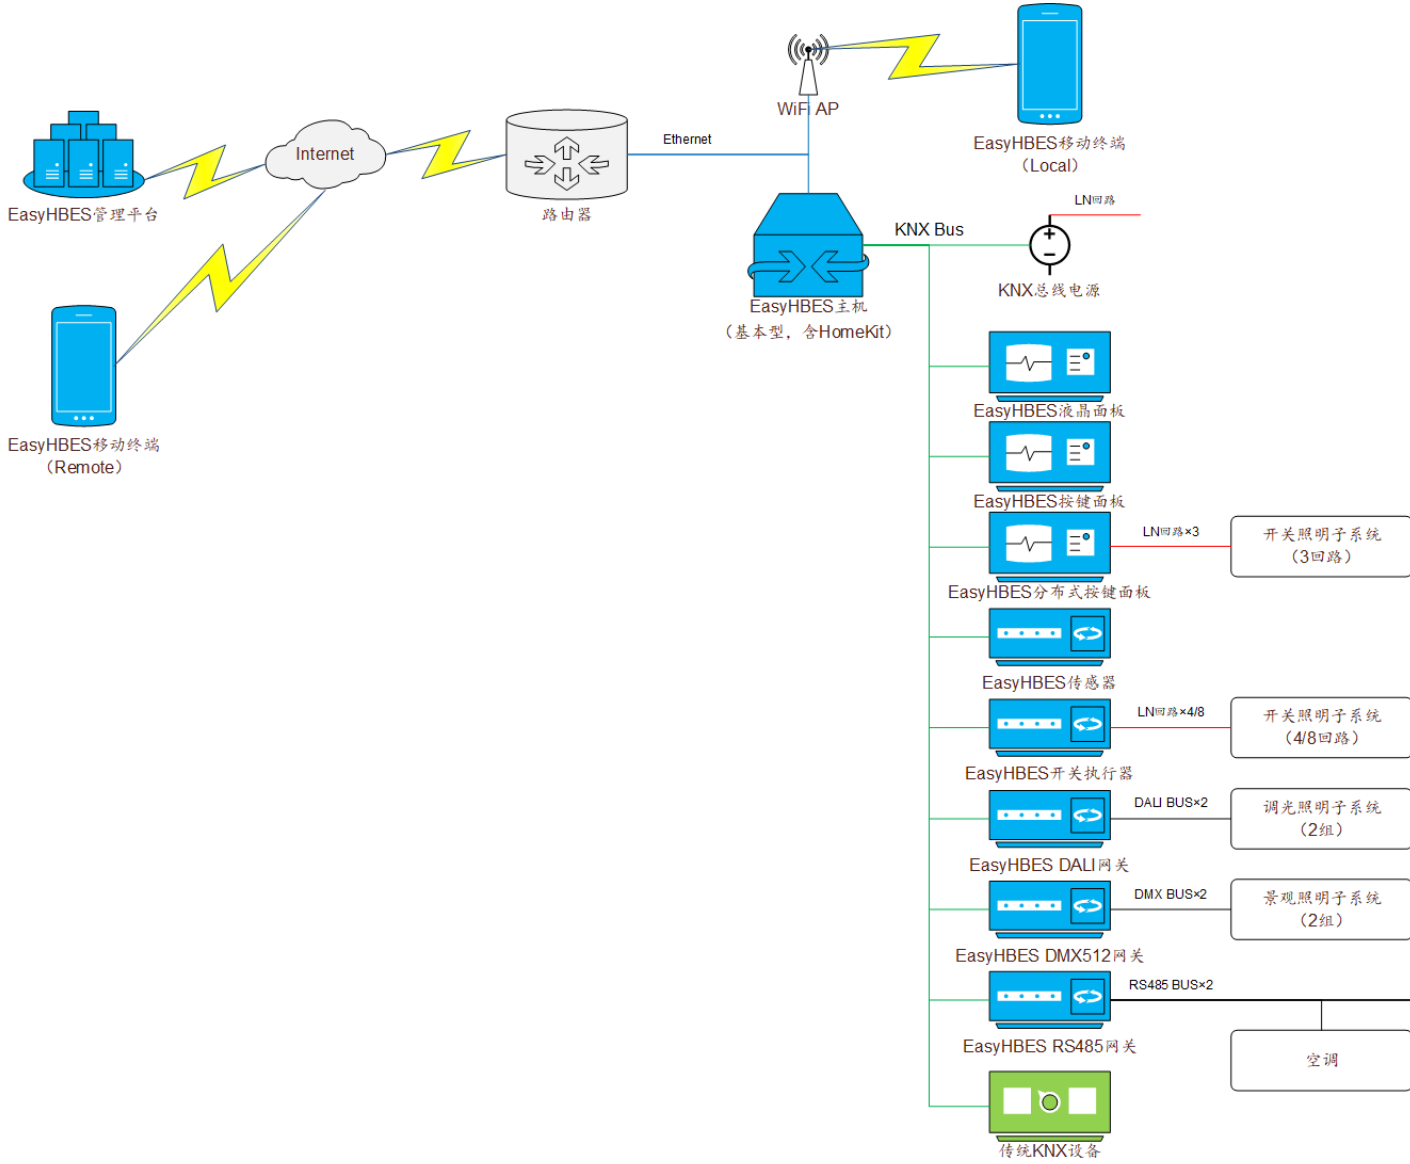

## Features

- Integrated with KS-07B0-FreeRTOS Stack
- Well-packaged SDK
- Sample code available
- Provides guidelines for model definition specification of KNX devices

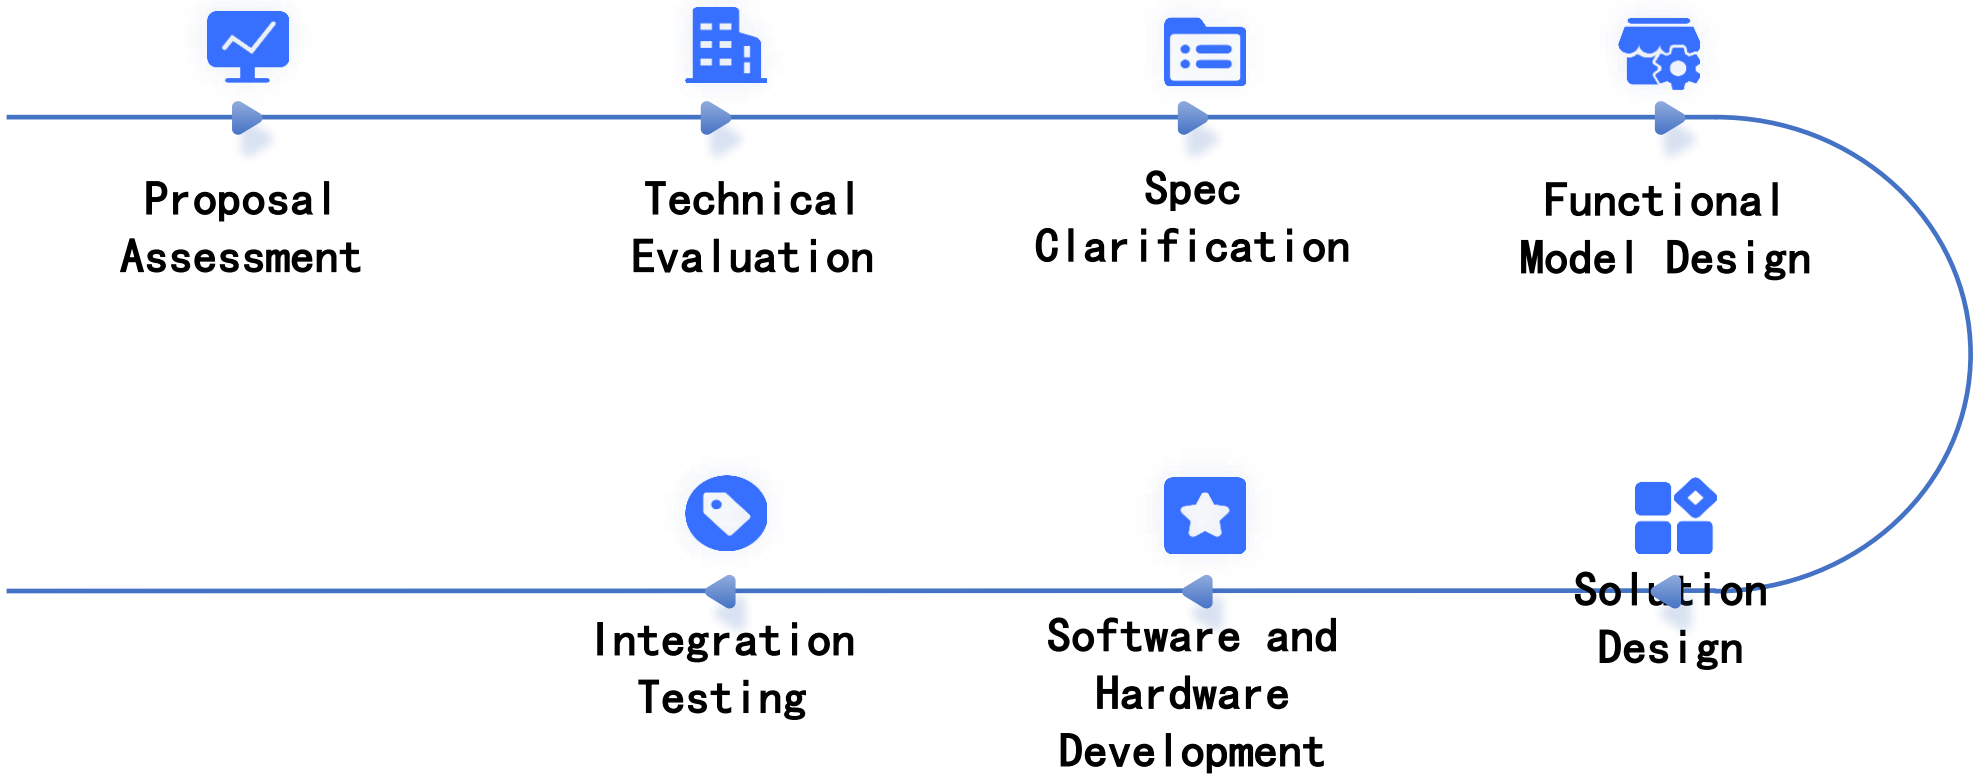

Download add: <http://www.turing-think.com/file/download/KNX终端设备开发评估套件.html>

## KNX System Management Solutions:

- Configuration automation
- Online project configuration management
- Quick device replacement
- Quick Dali debugging
- OTA
- Remote control and monitor
- Multi-ecosystem integration

**Based on KS-07B0-Linux&KS-07B0-FreeRTOS Stack**
